EXECUTIVE SUMMARY

This study analyzes the forecast traffic conditions associated with the proposed Joiner Ranch East project (proposed project) in the City of Lincoln. The proposed project would develop 199 single-family dwelling units on 25.5 acres of undeveloped land on the southeast corner of the Joiner Parkway/Nicolaus Road intersection. The proposed project would be built in one phase and is scheduled to be fully constructed by Year 2021. The project site would take access via a full access driveway on Nicolaus Road and a right-in/right-out/left-in driveway on Joiner Parkway.

The proposed project is forecast to generate approximately 1,958 new daily trips, which includes approximately 146 AM (36 inbound and 110 outbound) peak hour trips and 197 PM (124 inbound and 73 outbound) peak hour trips.

Level of Service Analysis Results

Existing Conditions:

The results of the Existing conditions analysis show that all study intersections currently operate at acceptable levels of service (LOS C or better) except for the following locations:

- Joiner Parkway / Moore Road (LOS D in the AM Peak Hour)
- Ferrari Ranch Road / Groveland Lane (LOS D in the AM & PM Peak Hours)

The roadway segment analysis shows that all study segments currently operate at acceptable levels of service (LOS C or better).

Existing Plus Project Conditions:

With the addition of project related traffic, all study intersections continue to operate at acceptable levels of service for the Existing Plus Project conditions with the exception of the following locations:

- Joiner Parkway / Moore Road (LOS E in the AM Peak Hour)
- Ferrari Ranch Road / Groveland Lane (LOS D in the AM & PM Peak Hours)

Of the locations operating deficiently, no direct significant impacts are expected to occur according to the significance criteria for study intersections. Therefore, no mitigation is required.

The roadway segment analysis shows that all study roadway segments operate at acceptable levels of service (LOS C or better) under Existing Plus Project Conditions. Therefore, no significant impacts are identified and no mitigation is required.

Existing Plus Approved/Pending Projects Without Project Conditions:

The results of the Existing Plus Approved/Pending Projects Without Project analysis show that all study intersections operate at acceptable levels of service (LOS C or better) except for the following locations:

- Nicolaus Road / Nelson Lane (LOS D in the AM Peak Hour)
- Joiner Parkway / Moore Road (LOS E in the AM Peak Hour)

- Ferrari Ranch Road / Groveland Lane (LOS D in the AM Peak Hour & LOS E in the PM Peak Hour)

The roadway segment analysis shows that all study segments operate at acceptable levels of service (LOS C or better) under Existing Plus Approved/Pending Projects Without Project conditions.

Existing Plus Approved/Pending Projects Plus Project Conditions:

With the addition of project related traffic, all study intersections continue to operate at acceptable levels of service (LOS C or better) for the Existing Plus Approved/Pending Projects Plus Project conditions except for the following locations:

- Nicolaus Road / Nelson Lane (LOS E in the AM Peak Hour)
- Joiner Parkway / Moore Road (LOS E in the AM Peak Hour)
- Ferrari Ranch Road / Groveland Lane (LOS D in the AM Peak Hour & LOS E in the PM Peak Hour)

Of the locations operating deficiently, no significant impacts are expected to occur according to the significance criteria for study intersections. Therefore, no mitigation is required.

The roadway segment analysis shows that all study roadway segments operate at acceptable levels of service (LOS C or better) under Existing Plus Approved/Pending Projects Plus Project Conditions. Therefore, no significant impacts are identified and no mitigation is required.

Cumulative Year 2040 Without Project Conditions:

The results of the Cumulative Year 2040 Without Project analysis show that all study intersections are forecast to operate at acceptable levels of service (LOS C or better) except for the following locations:

- Nicolaus Road / Nelson Lane (LOS D in the AM Peak Hour & LOS E in the PM Peak Hour)
- Joiner Parkway / Nicolaus Road (LOS E in the AM Peak Hour)
- Joiner Parkway / 1st Street (LOS E in the AM Peak Hour)
- Joiner Parkway / Moore Road (LOS F in the AM Peak Hour & LOS E in the PM Peak Hour)
- Joiner Parkway / Groveland Lane (LOS F in the AM Peak Hour & LOS D in the PM Peak Hour)
- Ferrari Ranch Road / Groveland Lane (LOS D in the AM and PM Peak Hours)

The roadway segment analysis shows that six out of eight study segments currently operate at deficient levels of service (LOS D or worse) under Cumulative Year 2040 Without Project conditions which include the following locations:

- Nicolaus Road from Lakeside Drive to Joiner Parkway (LOS D)
- Nicolaus Road from Joiner Parkway to O Street (LOS D)
- Joiner Parkway from 1st Street to Moore Road (LOS E)
- Joiner Parkway from Danbury Drive to Groveland Lane (LOS E)
- Ferrari Ranch Road from Joiner Parkway to Danbury Drive (LOS F)
- Ferrari Ranch Road from SR-65 NB Ramps to Groveland Lane (LOS E)

Cumulative Year 2040 Plus Project Conditions:

With the addition of project related traffic, all study intersections continue to operate at acceptable levels of service (LOS C or better) for the Cumulative Year 2040 Plus Project conditions except for the following locations:

- Nicolaus Road / Nelson Lane (LOS D in the AM Peak Hour & LOS E in the PM Peak Hour)
- Joiner Parkway / Nicolaus Road (LOS E in the AM Peak Hour)
- Joiner Parkway / 1st Street (LOS F in the AM Peak Hour)
- Joiner Parkway / Moore Road (LOS F in the AM & PM Peak Hour)
- Joiner Parkway / Groveland Lane (LOS F in the AM Peak Hour & LOS D in the PM Peak Hour)
- Ferrari Ranch Road / Groveland Lane (LOS D in the AM and PM Peak Hours)

Of the locations operating deficiently, one of the six is forecast to result in a significant impact according to the significance criteria and would require mitigation. The mitigation measure shown in **Table ES-1** has been identified to achieve acceptable levels of service and fully mitigate project forecast significant impact at the study intersection for Cumulative Year 2040 Plus Project conditions.

Joiner Parkway / Moore Road Mitigation Measure: The project applicant will contribute its fair share cost toward installation of a traffic signal at the Joiner Parkway / Moore Road intersection within the existing right-of-way. The City of Lincoln's Public Facilities Element (PFE) has already identified the need for signalization at this intersection (# 71 in PFE Map). Thus, mitigation proposed is consistent with the project's qualifying for funding in the PFE. **Table ES-1** shows the improved level of service at Joiner Parkway / Moore Road with the installation of a traffic signal.

The roadway segment analysis shows that six out of eight study segments currently operate at deficient levels of service (LOS D or worse) under Cumulative Year 2040 Plus Project conditions which include the following locations:

- Nicolaus Road from Lakeside Drive to Joiner Parkway (LOS D)
- Nicolaus Road from Joiner Parkway to O Street (LOS E)
- Joiner Parkway from 1st Street to Moore Road (LOS E)
- Joiner Parkway from Danbury Drive to Groveland Lane (LOS E)
- Ferrari Ranch Road from Joiner Parkway to Danbury Drive (LOS F)
- Ferrari Ranch Road from SR-65 NB Ramps to Groveland Lane (LOS E)

Of the locations operating deficiently, one of the eight study roadway segments is forecast to result in a cumulative significant impact according to the significance criteria and would require mitigation.

Nicolaus Road from Joiner Parkway to O Street Mitigation Measure: The project plans to widen Nicolaus Road on the south side along the project frontage (approximately 1,150 feet). The widening would consist of adding approximately 30 feet to the existing 40-foot pavement width to match the existing curb-to-curb width of 70 feet immediately east of the project site. This new section of roadway would include one travel lane in each direction with a center two-way left-turn lane (3 total lanes) which will increase roadway capacity from 18,000 to 27,000 vehicles per day. In addition, the center two-way left-turn lane would allow for westbound left-turn movements into the project site. As shown in **Table ES-1**, this mitigation would improve the level of service to an acceptable level (LOS

C) and fully mitigate the project forecast significant impact at the study segment under Cumulative Year 2040 Plus Project conditions.

Vehicle Miles Traveled (VMT) Summary:

This report evaluates potential VMT impacts as it relates to the proposed project. VMT per capita maps were used to determine if the project is located within a low or high VMT per capita area compared to the average VMT per capita in the Sacramento region. According to the VMT maps, the project site is located within an area that is expected to generate 100% to 115% of the regional average VMT per capita. This map indicates the project site is not located within a VMT efficient area. As there is not high-quality transit within ¼ mile of the site, the project is also not included in a transit priority area. Based on screening criteria established by OPR, the project would likely be subject to a CEQA VMT analysis. Since the VMT per capita maps show the project site to be in an area where VMT is currently 100% to 115% of the regional average, it is reasonable to assume the proposed residential project in the City of Lincoln falls above the 85% threshold and will most likely have a significant VMT impact that will require mitigation.

For the project to reduce VMT-related impacts, recommended mitigation would be for the project to implement Transportation Demand Management (TDM) strategies. The California Air Pollution Control Officers Association (CAPCOA) report may be used to determine a wide range of TDM measures that could offset the project's VMT impacts. The following TDM measures have been identified to offset potential VMT impacts related to the proposed project:

- Provide Class II bike lanes along the project frontage to encourage an alternative travel mode.
- Provide pedestrian network improvements such as sidewalks and crosswalks within the project site and along the project frontage connecting to existing pedestrian facilities to encourage people to walk instead of drive.
- Provide traffic calming measures within the project site to encourage people to walk or bike instead of using a vehicle. Traffic calming measures may include marked crosswalks, curb extensions, speed tables, roundabouts or mini-circles, on-street parking, planter strips with street trees, chicanes/chokers, etc.

TABLE ES-1. CUMULATIVE YEAR 2040 PLUS PROJECT MITIGATION MEASURES

Study Location	Pre-Mitigation LOS	Recommended Mitigation	Post Mitigation LOS
Joiner Parkway / Moore Road	LOS F (AM & PM Peak Hour)	The project applicant will contribute its fair share cost toward installation of a traffic signal at the Joiner Parkway / Moore Road intersection within the existing right-of-way. The City of Lincoln’s Public Facilities Element (PFE) has already identified the need for signalization at this intersection (identified as #71 in PFE Map). Thus, mitigation proposed is consistent with the project’s qualifying for funding in the PFE.	AM Peak Hour = LOS A PM Peak Hour = LOS A
Nicolaus Road from Joiner Parkway to O Street	LOS E	The project plans to widen Nicolaus Road on the south side along the project frontage (approximately 1,150 feet). The widening would consist of adding approximately 30 feet to the existing 40-foot pavement width to match the existing curb-to-curb width of 70 feet immediately east of the project site. This new section of roadway would include one travel lane in each direction with a center two-way left-turn lane (3 total lanes) which will increase roadway capacity from 18,000 to 27,000 vehicles per day. In addition, the center two-way left-turn lane would allow for WB left turn movements into the project site.	LOS B

1 INTRODUCTION

This study analyzes the forecast traffic conditions associated with the proposed Joiner Ranch East project in the City of Lincoln. The project is planning to construct 199 single-family dwelling units on 25.5 acres of vacant undeveloped land.

Exhibit 1 shows the regional location of the project site. **Exhibit 2** shows the proposed site plan.

The proposed project is forecast to generate approximately 1,958 new daily trips which includes approximately 146 AM (36 inbound and 110 outbound) peak hour trips and 197 PM (124 inbound and 73 outbound) peak hour trips.

This traffic impact study has been prepared in accordance with the City of Lincoln's General Plan policies as well as the Transportation and Circulation Element. The scope of this traffic study was coordinated with the City of Lincoln in December 2019. **Appendix A** includes the Traffic Study Scoping Agreement.

1.1 STUDY AREA

The study evaluates the following fifteen (15) intersections during the AM and PM peak hours in the vicinity of the project site:

1. Nicolaus Road/Nelson Lane
2. Nicolaus Road/Lakeside Drive
3. Joiner Parkway/Nicolaus Road
4. Joiner Parkway/5th Street
5. Joiner Parkway/3rd Street
6. Joiner Parkway/1st Street
7. Joiner Parkway/Moore Road
8. Joiner Parkway/Danbury Drive
9. Joiner Parkway/Groveland Lane
10. Joiner Parkway/Ferrari Ranch Road
11. Ferrari Ranch Road/Groveland Lane
12. Ferrari Ranch Road/SR-65 Northbound Ramps
13. Ferrari Ranch Road/SR-65 Southbound Ramps
14. Nicolaus Road/Site Driveway #1
15. Joiner Parkway/Site Driveway #2

The study also evaluates the following eight (8) roadway segments for average daily traffic volumes in a 24-hour period in the vicinity of the project site:

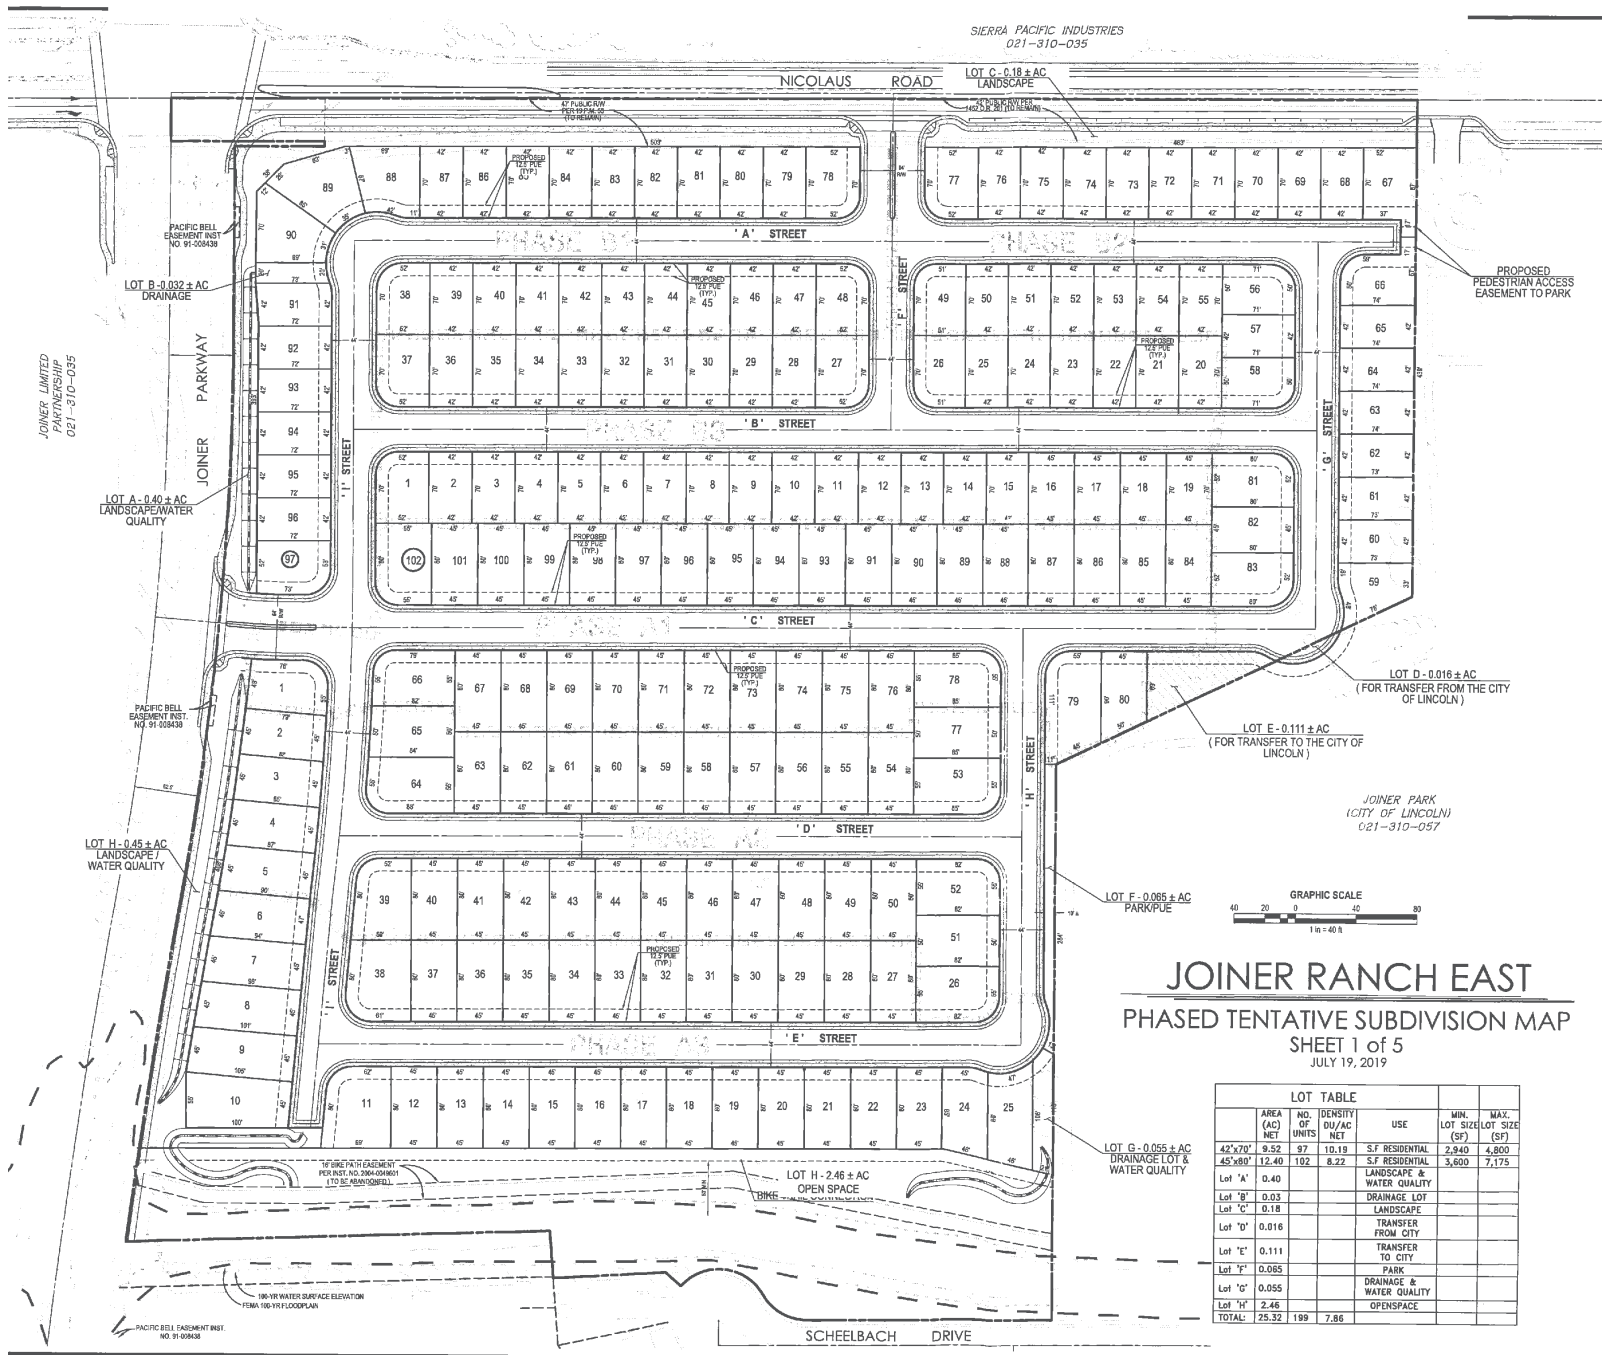

- A. Nicolaus Road from Lakeside Drive to Joiner Parkway
- B. Nicolaus Road from Joiner Parkway to O Street
- C. Joiner Parkway from Nicolaus Road to 5th Street
- D. Joiner Parkway from 1st Street to Moore Road
- E. Joiner Parkway from Danbury Drive to Groveland Lane
- F. Joiner Parkway from Ferrari Ranch Road to Lincoln Boulevard

- G. Ferrari Ranch Road from Joiner Parkway to Danbury Drive
- H. Ferrari Ranch Road from SR-65 Northbound Ramps to Groveland Lane

These 15 intersections and 8 roadway segments have been identified in coordination with City staff as potential locations impacted by the proposed project as shown in **Exhibit 3**. These study locations are analyzed for the following conditions:

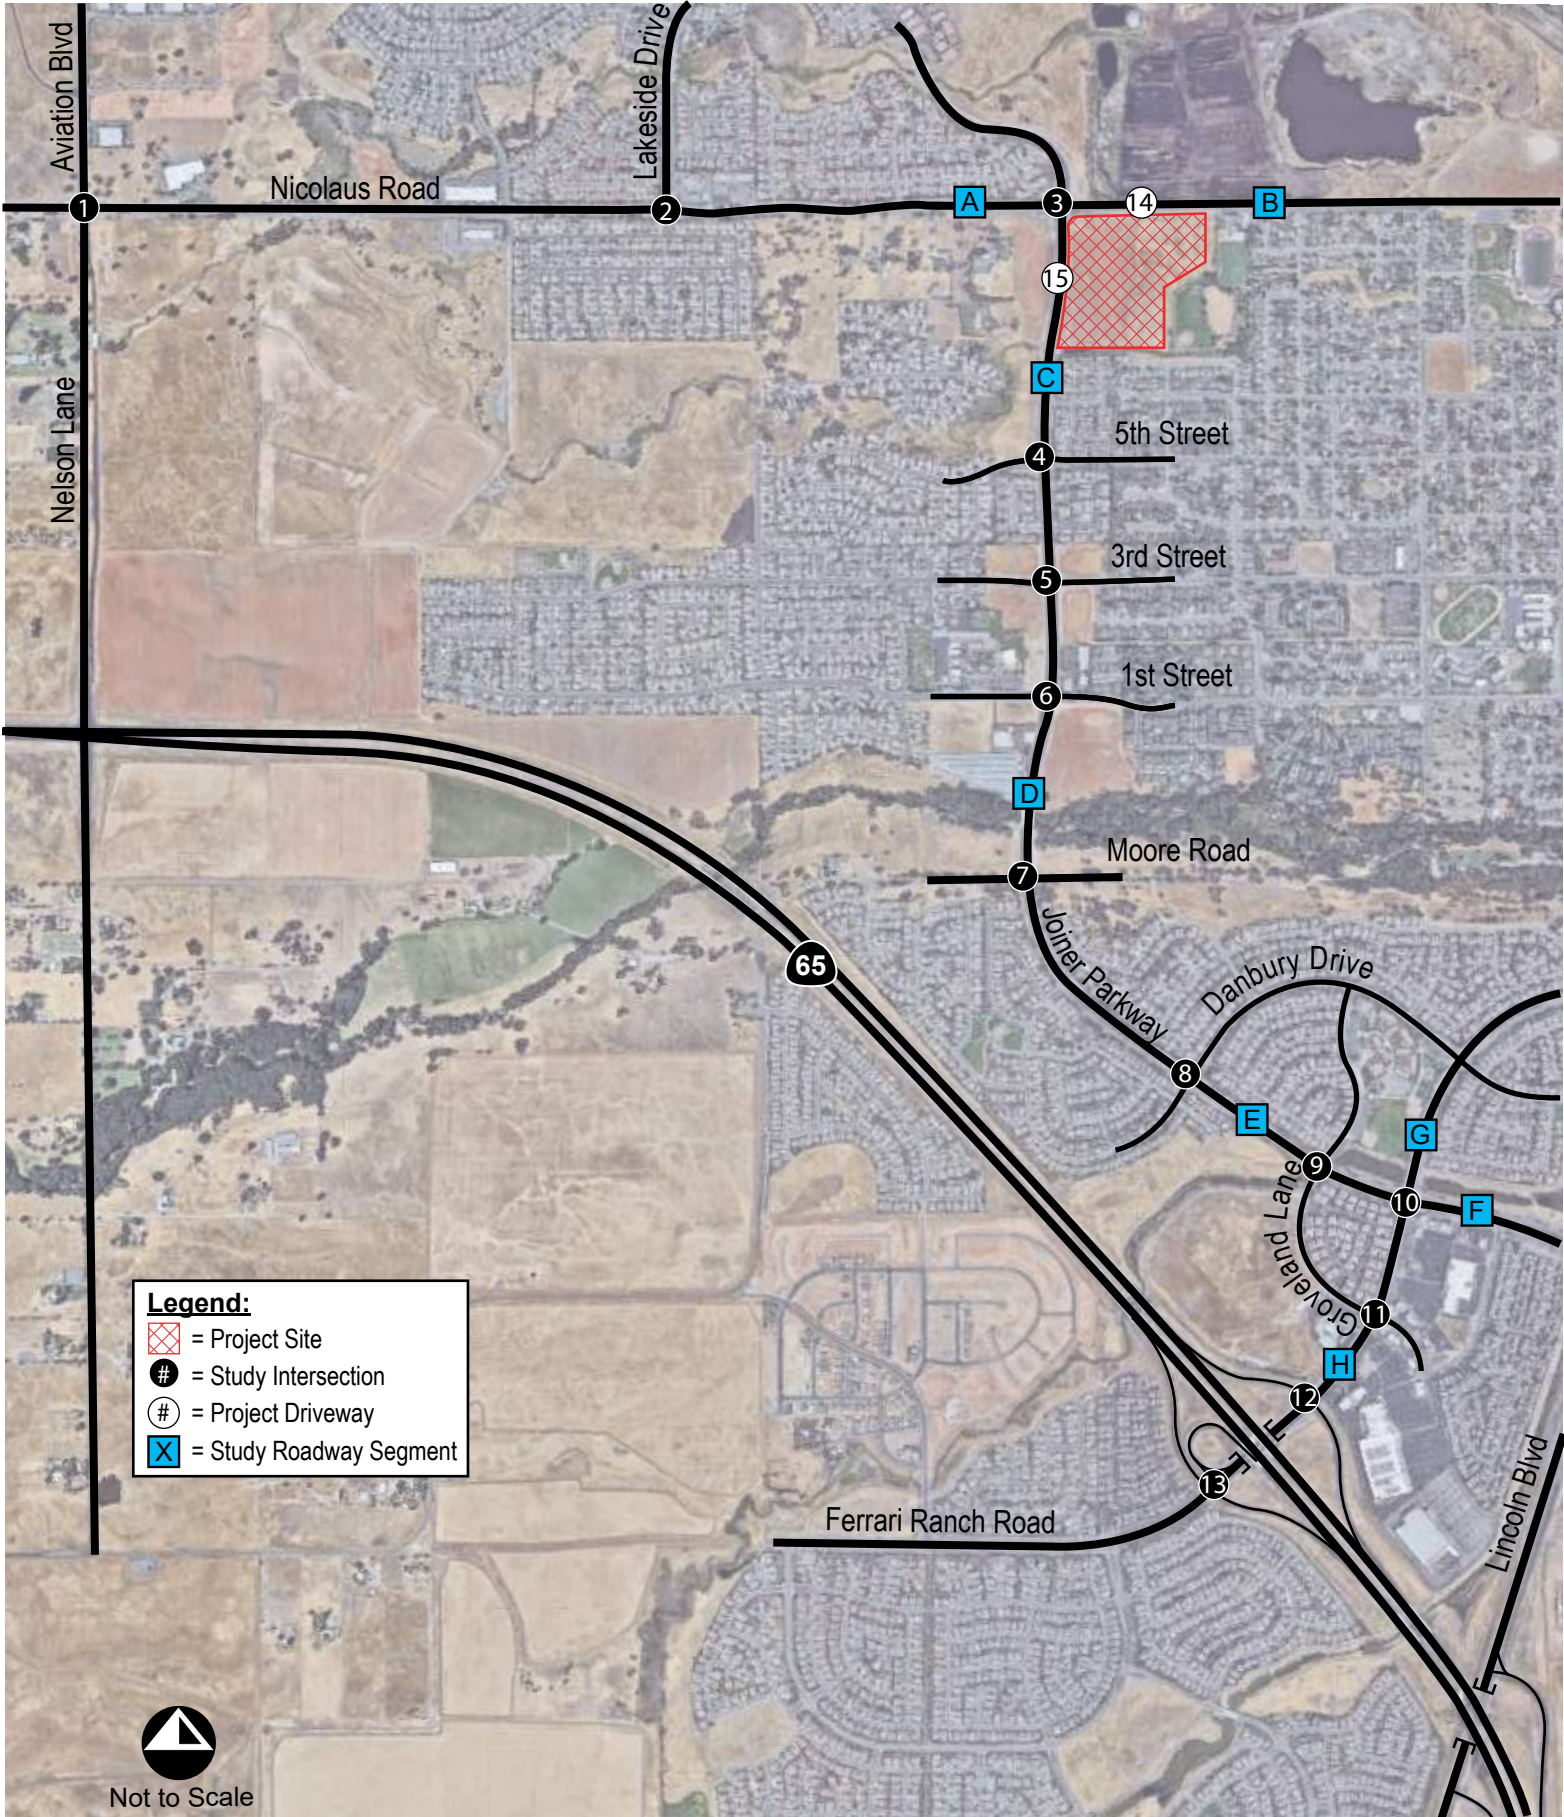

- Existing Conditions
- Existing Plus Project Conditions
- Existing Plus Approved/Pending Projects Without Project Conditions
- Existing Plus Approved/Pending Projects Plus Project Conditions
- Cumulative Year 2040 Without Project Conditions
- Cumulative Year 2040 Plus Project Conditions

1.2 ANALYSIS METHODOLOGY

1.2.1 Intersection Methodology

Level of Service (LOS) is commonly used as a qualitative description of intersection operation and is based on the capacity of the intersection and the volume of traffic using the intersection. The intersection analysis conforms to the operational analysis methodology outlined the *Highway Capacity Manual (HCM 6th Edition)* and performed utilizing the *Synchro 10* traffic analysis software.

The *HCM* analysis methodology describes the operation of an intersection using a range of level of service from LOS A (free-flow conditions) to LOS F (severely congested conditions), based on the corresponding stopped delay experienced per vehicle for study intersections as shown in **Table 1**.

For signalized intersections, signal timing data and parameters such as cycle lengths, splits, clearance intervals, etc. were obtained from the current signal timing sheets provided by City staff and incorporated into the Synchro model (see **Appendix B**). Synchro reports average delays for a signalized intersection, which correspond to a particular LOS, to describe the overall operation of an intersection.

Unsignalized intersection LOS for all-way stops is based on the average delay for all approaches. Delay for one-way or two-way stop-controlled intersections is based on available gaps in traffic flow on the non-controlled approach and LOS is based on the approach with the worst delay.

Signal Warrants: For the unsignalized intersections that are potentially impacted by the project, a signal warrant will be evaluated using the Peak Hour Volume Warrant (Warrant #3) based on the *California Manual on Uniform Traffic Control Devices (CA MUTCD)*, 2014 Edition. Warrant #3 in the CA MUTCD evaluates the peak hour volumes at the intersection which is the most appropriate warrant for this analysis. Signal warrants evaluated in this analysis are provided in **Appendix J**.

TABLE 1. LEVEL OF SERVICE & DELAY RANGE

Level of Service	Control Delay (seconds/vehicle)		Description
	Signalized Intersections	Unsignalized Intersections	
A	≤ 10.0	≤ 10.0	Operates with very low delay and most vehicles do not stop.
B	> 10.0 to 20.0	> 10.0 to 15.0	Operates with good progression with some restricted movements.
C	> 21.0 to 35.0	>15.1 to 25.0	Operates with significant number of vehicles stopping with some backup and light congestion.
D	> 35.1 to 55.0	> 25.0 to 35.0	Operates with noticeable congestion, longer delays occur, and many vehicles stop.
E	>55.0 to 80.0	> 35.1 to 50.0	Operates with significant delay, extensive queuing and unfavorable progression.
F	> 80.0	> 50.0	Operates at a level that is unacceptable to most drivers. Arrival rates exceed capacity of the intersection. Extensive queuing occurs.

Source: Highway Capacity Manual (HCM) 6th Edition.

1.2.2 Roadway Segment Methodology

The City of Lincoln does not have adopted criteria for daily roadway segment level of service thresholds. Therefore, the roadway segment levels of service were calculated based on Placer County's established capacity thresholds defined by roadway classification and ADT volumes. **Table 2** provides the maximum daily traffic volume per lane level of service thresholds based on roadway classification.

TABLE 2. PLACER COUNTY ROADWAY SEGMENT LEVEL OF SERVICE

Roadway Classification	Maximum Daily Traffic Volume Per Lane Level of Service				
	LOS A	LOS B	LOS C	LOS D	LOS E
Freeway – Level Terrain	6,300	10,620	13,680	17,740	18,000
Freeway - Rolling Terrain	5,290	8,920	11,650	14,070	15,120
Freeway - Mountainous Terrain	3,400	5,740	7,490	6,040	9,720
Arterial - High Access Control	6,000	7,000	8,000	9,000	10,000
Arterial - Moderate Access Control	5,400	6,300	7,200	8,100	9,000
Arterial - Low Access Control	4,500	5,250	6,000	6,870	7,500
Rural 2-Lane Highway - Level Terrain	1,500	2,950	4,800	7,750	12,500
Rural 2-Lane Highway - Rolling Terrain	800	2,100	3,800	5,700	10,500
Rural 2-Lane Highway - Mountainous Terrain	400	1,200	2,100	3,400	7,000

1.2.3 Bikeway Facilities

Design standards and bikeway facilities are established by the California Department of Transportation (Caltrans) and provided in the Caltrans Highway Design Manual (2015). Bicycle facilities are defined using the following four classifications:

- **Class I Bikeway (Bike Path)** – facilities with exclusive right-of-way for bicyclists and pedestrians, away from the roadway and with cross flows by motor traffic minimized.
- **Class II Bikeway (Bike Lanes)** – bike lanes established along streets and defined by pavement striping and signage to delineate a portion of the roadway for bicycle travel. Bike lanes are one-way facilities, typically striped adjacent to motor traffic travelling in the same direction.
- **Class III Bikeways (Bike Routes)** – a preferred route for bicyclists on streets shared with motor traffic not served by dedicated bikeways to provide continuity to the bikeway network. Bike routes are generally not appropriate for roadways with higher motor traffic speeds or volumes. Bike routes are established by placing bike route signs and optional shared roadway markings (sharrow) along roadways.
- **Class IV Bikeways** – often referred to as a cycle track or protected bike lane and is for the exclusive use of bicycles, physically separated from motor traffic with a vertical feature. The separation may include grade separation, flexible posts, inflexible barriers, or on-street parking. Separated bikeways can provide for one-way or two-way travel.

1.3 THRESHOLDS OF SIGNIFICANCE

According to the *City of Lincoln General Plan* (March 2008), the City has adopted level of service “C” or better as acceptable operating conditions for roadway segments and signalized intersections during the PM peak hour. Refer to Policy T-2.3 in the City’s General Plan. For purposes of this analysis, the LOS “C” standard also applies to all intersections in the City of Lincoln, including unsignalized intersections in both peak hours. General Plan Policy T-2.4 states that the City shall coordinate with Caltrans with the goal of maintaining a minimum of LOS “D” conditions for SR-65. For the purpose of this analysis, LOS D is the minimum LOS standard at the Ferrari Ranch Road/SR-65 interchange. The City of Lincoln has not established significance thresholds to determine project-related impacts. Therefore, this analysis uses Placer County’s methodologies for determining significance of traffic impacts which include:

Signalized Intersections:

- *If a project would worsen an intersection peak hour LOS to D or worse, it is considered a significant impact that must be mitigated, **or***
- *If a project would increase the overall average intersection delay of 4 seconds or more to an intersection currently operating below LOS D, it is considered a significant impact that must be mitigated.*

Unsignalized Intersections:

- *If a project would worsen an all-way stop or side street stop-controlled intersection peak hour LOS to D or worse **and** cause the intersection to meet MUTCD traffic signal warrants, it is considered a significant impact that must be mitigated, **or***
- *If a project would worsen an already deficient all-way stop or side street stop-controlled intersection to an overall increase of 2.5 seconds or more with the project **and** meets MUTCD signal warrants, it is considered a significant impact that must be mitigated.*

Roadway Segments:

- *If a project would worsen a roadway segment operating at a deficient LOS D or worse that is operating at an acceptable LOS D or better without the project, it is considered a significant impact that must be mitigated, **or***
- *If a project would worsen an already deficient roadway segment to experience an increase in V/C ratio of 0.05 or greater, it is considered a significant impact that must be mitigated, **or***
- *If a project would worsen an already deficient roadway segment to experience an increase in ADT of 100 or more project generated trips, per lane, it is considered a significant impact that must be mitigated.*

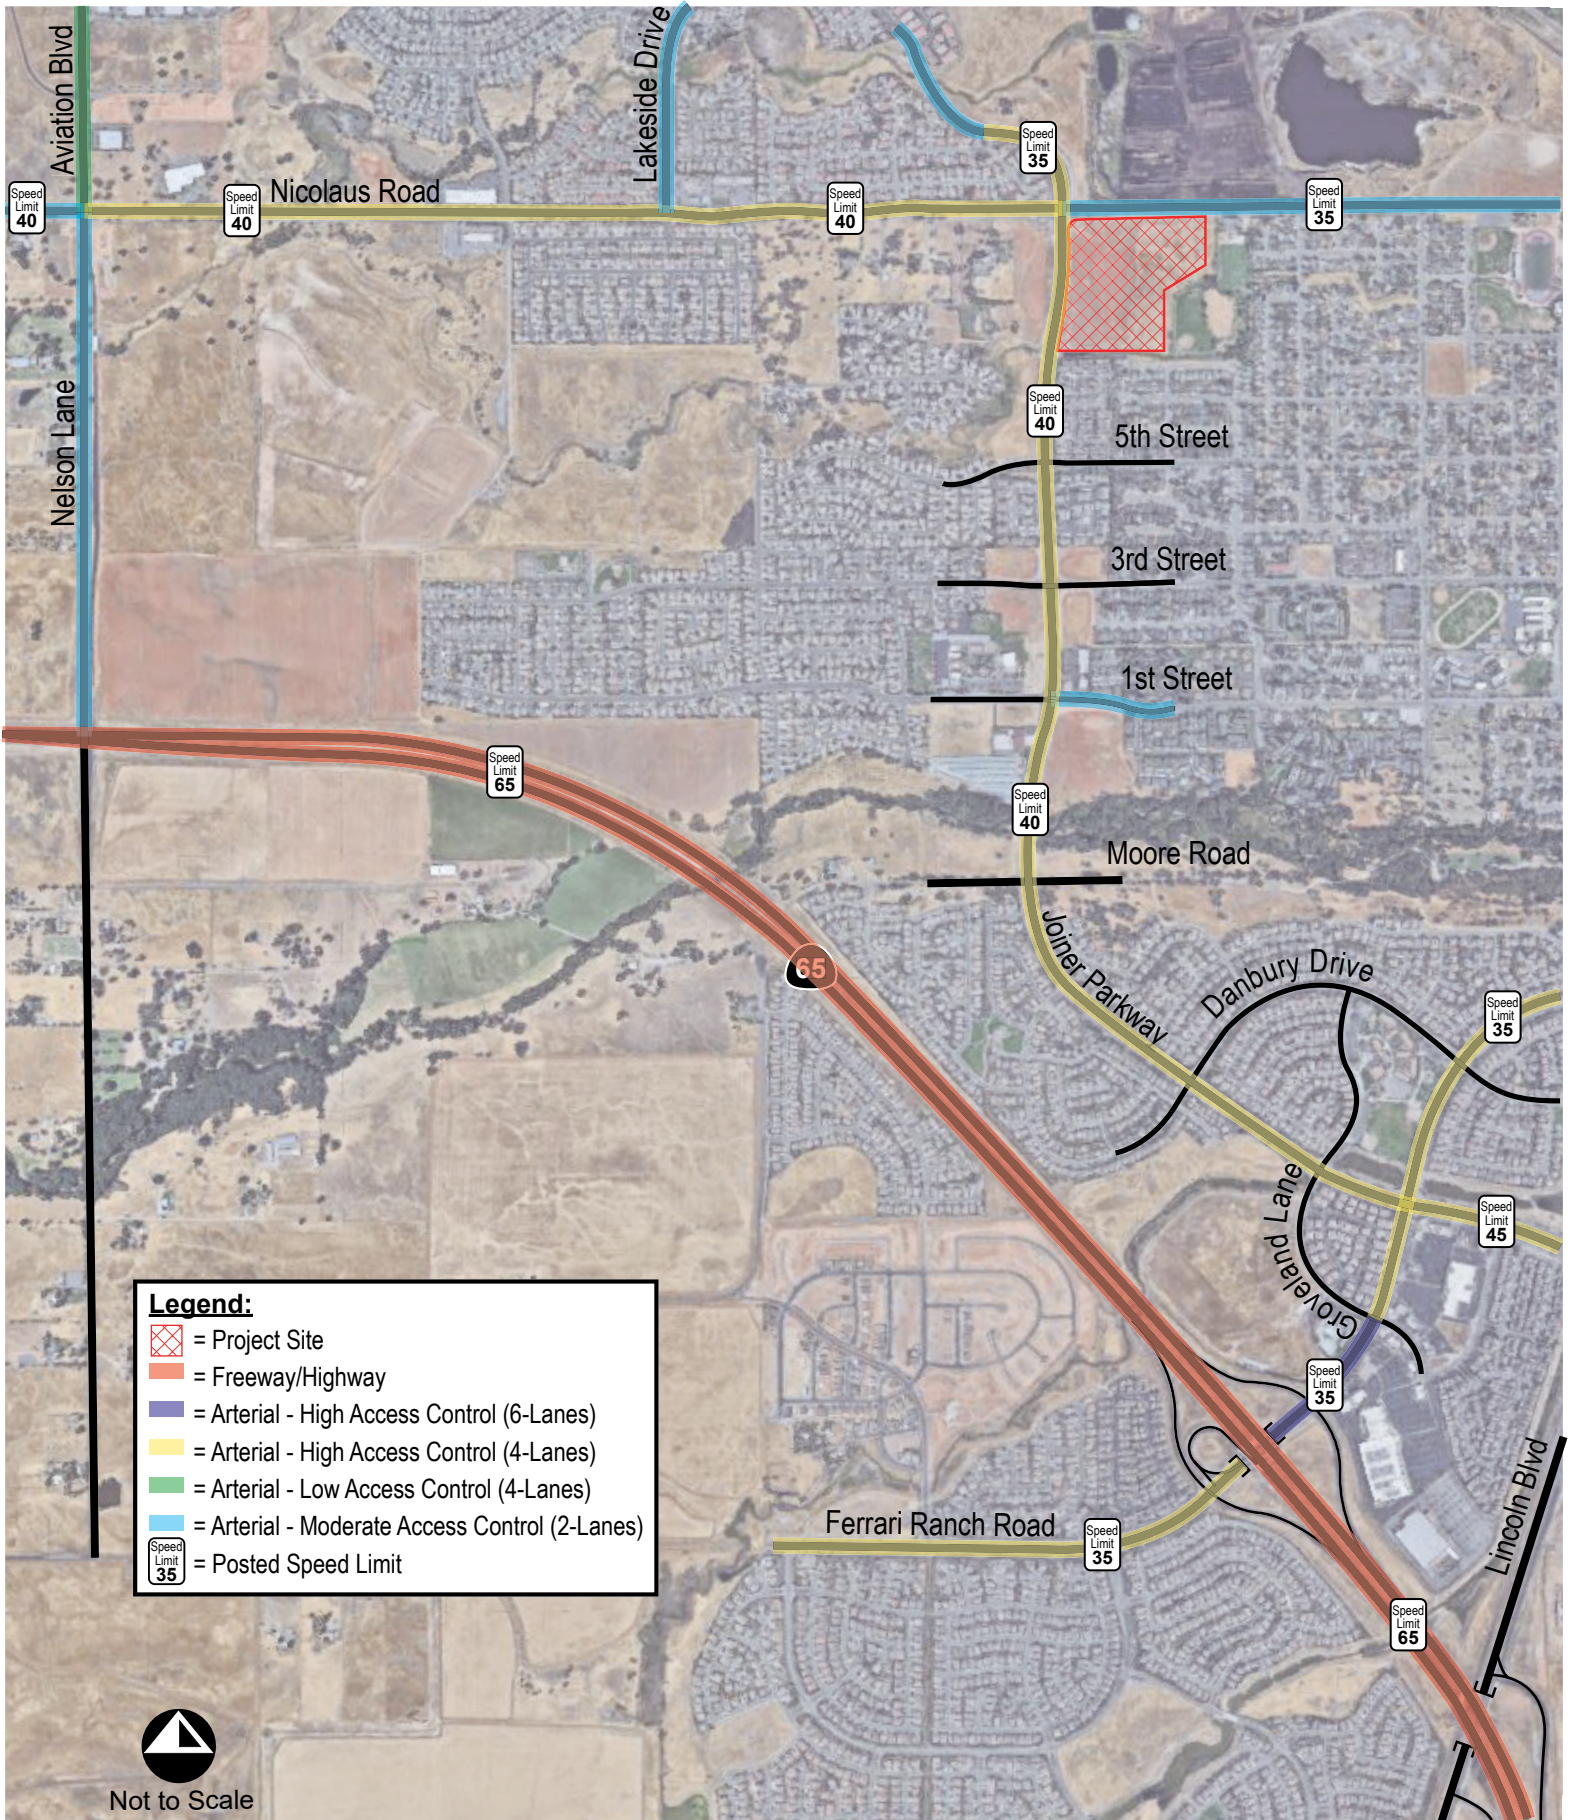

2 EXISTING CONDITIONS

2.1 SURROUNDING ROADWAY NETWORK

The characteristics of the roadway system in the vicinity of the project site are described below:

- **State Route 65 (SR-65)** is a state highway that begins in the City of Roseville at Interstate 80 and continues through the City of Lincoln to the Cities of Sheridan, Wheatland and Yuba to the north. The Lincoln Bypass now directs SR-65 traffic west of Lincoln. SR-65 is a four-lane freeway with interchanges at Ferrari Ranch Road, Lincoln Boulevard and Twelve Bridges Drive to the south of the project site and Nelson Lane to the west of the project site. Regional access to the project site will be provided via the Ferrari Ranch Road/SR-65 interchange and Nelson Lane/SR-65 intersection.
- **Nelson Lane** is a north-south divided roadway to the west of the current boundary of the City of Lincoln. Nelson Lane is a four-lane divided roadway that provides direct access to SR-65. On-street parking is prohibited and the posted speed limit is 55 MPH. There are no Class II bike lanes or sidewalks on either side of the roadway. North of Nicolaus Road, Nelson Lane becomes Aviation Boulevard that provides access to Lincoln Airport and Lincoln Air Center.
- **Nicolaus Road** is an east-west divided roadway from Nelson Lane to Joiner Parkway. This section of Nicolaus Road is a four-lane roadway that provides direct access to the project site. On this section of Nicolaus Road, a Class I multi-use path is provided along the north side of the roadway and Class II bike lanes are provided along the south side of the road. The posted speed limit is 40 MPH west of Joiner Parkway. East of Joiner Parkway, Nicolaus Road is a two-lane undivided roadway with a posted speed limit of 35 MPH. Class II bike lanes are provided on both sides of the road with a sidewalk provided on the south side of Nicolaus Road.
- **Joiner Parkway** is a north-south divided roadway within the project study area. Joiner Parkway is a four-lane roadway with a posted speed limit of 40 MPH near the project site and 45 MPH to the south near Ferrari Ranch Road. Class II bike lanes and sidewalks are provided on both sides of the roadway. On street parking is prohibited on both sides.
- **Ferrari Ranch Road** is an east-west divided roadway within the project study area. Ferrari Ranch Road is a six-lane roadway from Joiner Parkway to the SR-65 northbound ramps and then transitions to a five-lane roadway from SR-65 northbound ramps to Courtyards Way. A Class I multi-use path is provided along the north side of Ferrari Ranch Road from Courtyards Way to Caledon Circle where the road terminates. A Class II bike lane is provided along the south side of the Ferrari Ranch Road from Danbury Drive to Caledon Circle. The posted speed limit is 35 MPH. Sidewalks are provided on both sides of the road within the study area.

Exhibit 4 shows the existing roadway network within the project study area.

2.2 EXISTING PEDESTRIAN, BICYCLE, AND TRANSIT FACILITIES

2.2.1 Pedestrian Facilities

Sidewalks are currently provided on both sides of the streets in the residential neighborhoods to the east, west, and north of the project site. **Exhibit 5** shows the presence of sidewalks within the study area on the major roadways. On Nicolaus Road east of the project site, sidewalks are currently provided on the south side of the roadway. A Class I multi-use path is provided for pedestrians along the north side of Nicolaus Road west of Joiner Parkway and also on the east side of Joiner Parkway north of Nicolaus Road. Sidewalks are currently provided on both sides of Joiner Parkway. The project will be responsible for providing a sidewalk along the project frontage on Nicolaus Road and Joiner Parkway.

2.2.2 Bicycle Facilities

The bicycle facilities outlined in this report are consistent with the City of Lincoln's 2012 *Bicycle Transportation Plan Update*. Within the vicinity of the project site, Class II bike lanes are provided on several roadways adjacent to project including Joiner Parkway and Nicolaus Road as shown in **Exhibit 5**. In addition, Class I multi-use paths currently exist along Nicolaus Road between Waverly Drive and Joiner Parkway. The Class I facilities are used by bicyclists as well as pedestrians. The project will be responsible for extending the Class II bike lanes along Nicolaus Road and Joiner Parkway along the project's frontage.

2.2.3 Transit Facilities

Transit service in the City of Lincoln consists of the "Lincoln Route" which is operated by Placer County Transit. Although this route serves downtown and other areas of the City, it does not currently extend to the northeast quadrant of the City where the project is located. The closest transit route to the project site is located approximately 1.2 miles to the southeast near the corner of 3rd Street/R Street in downtown Lincoln.

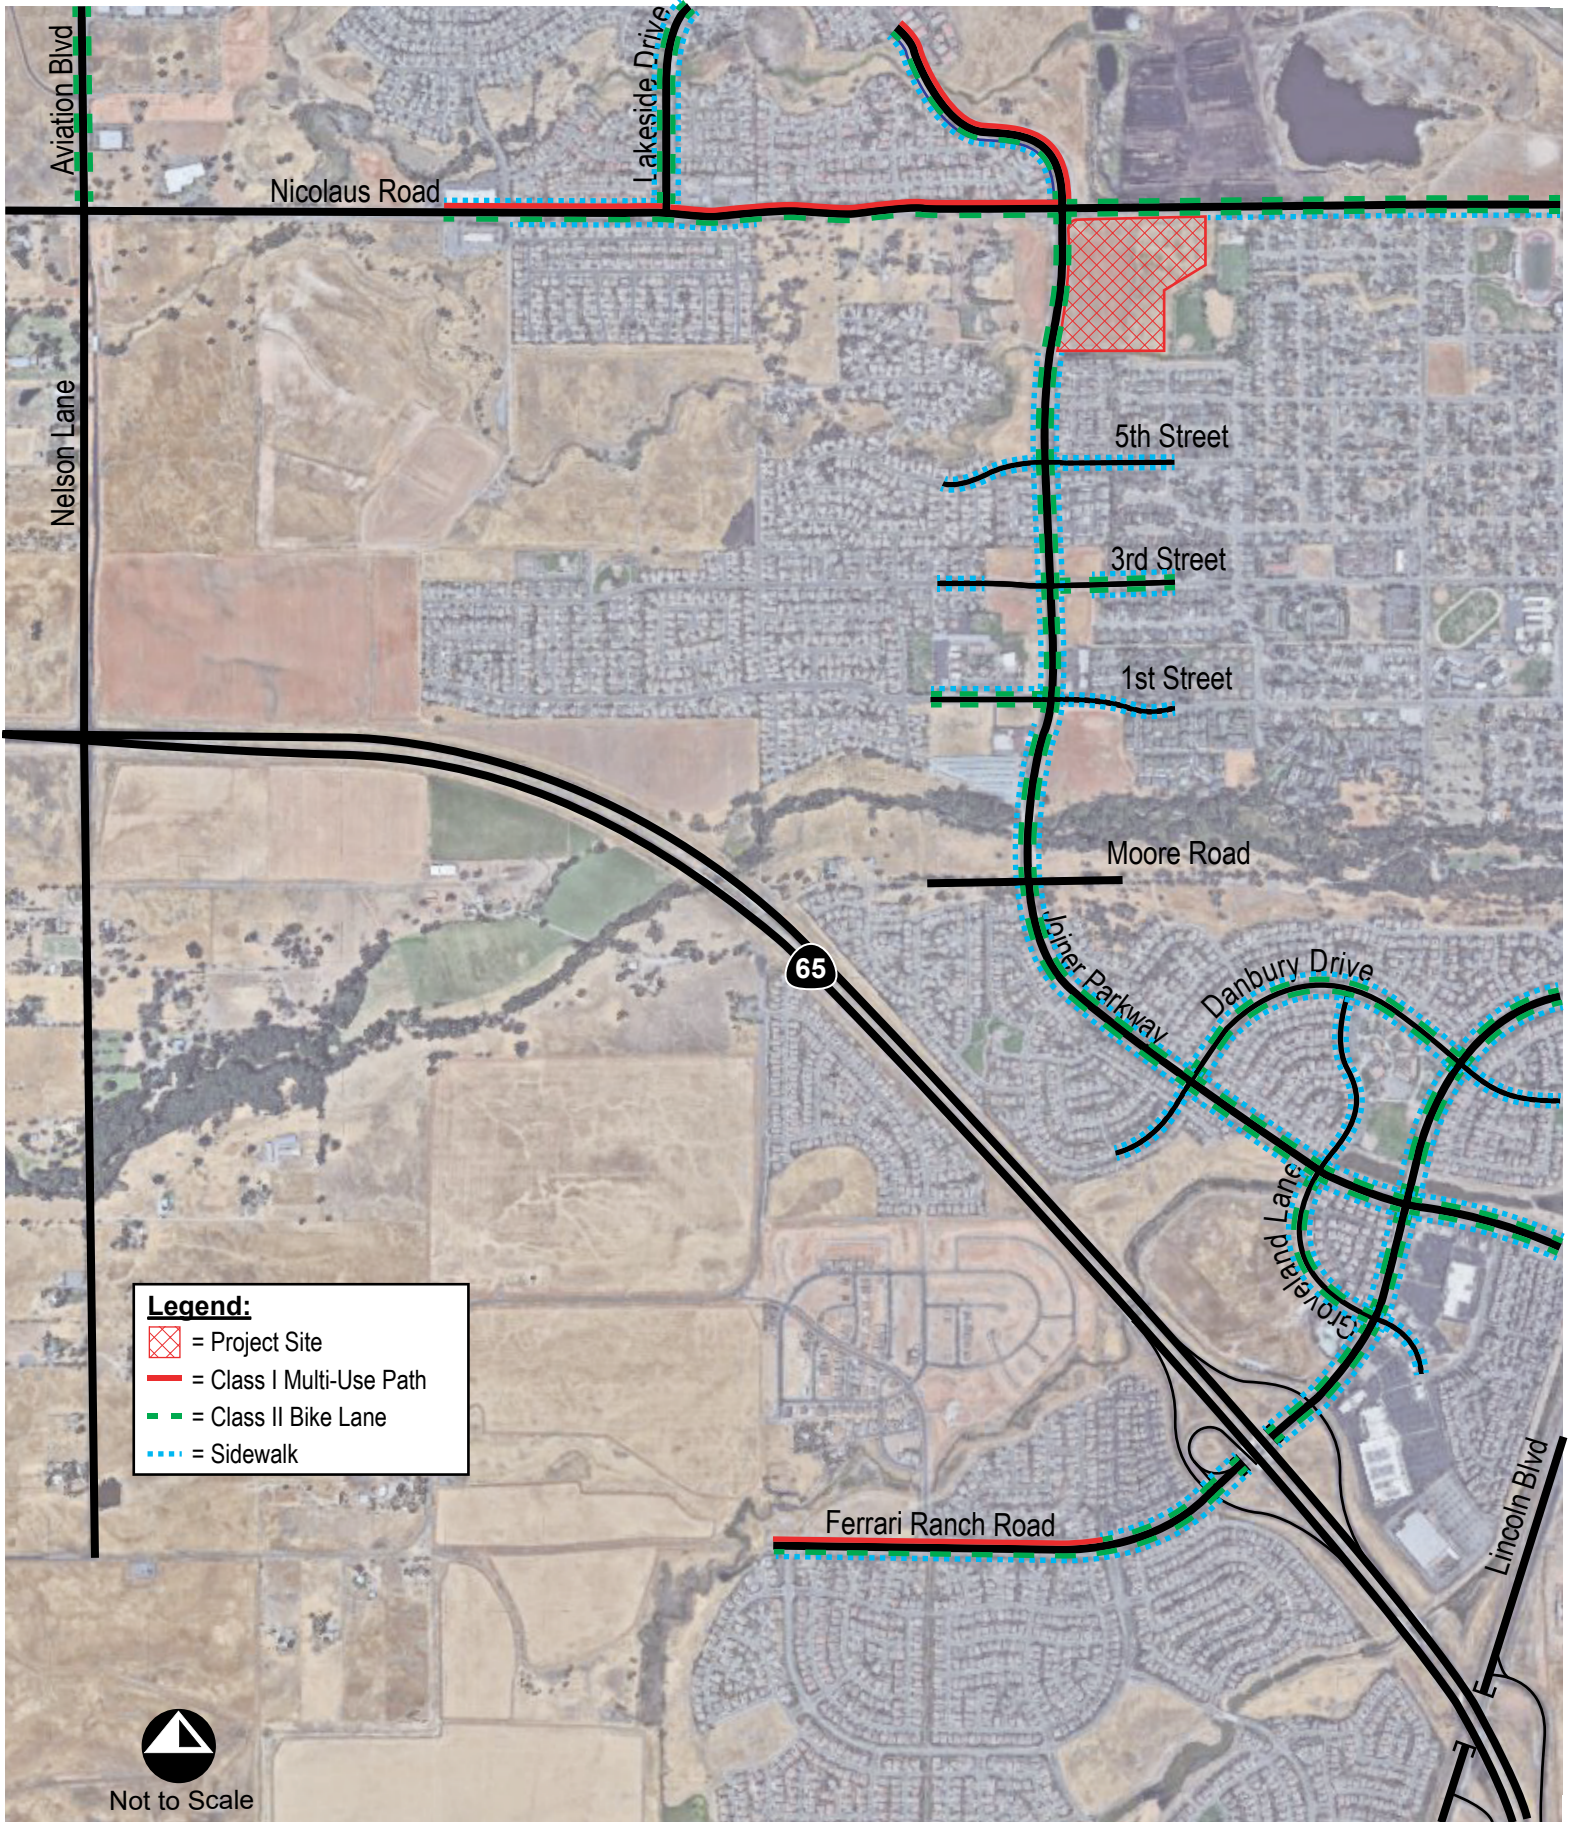

2.3 EXISTING TRAFFIC VOLUMES

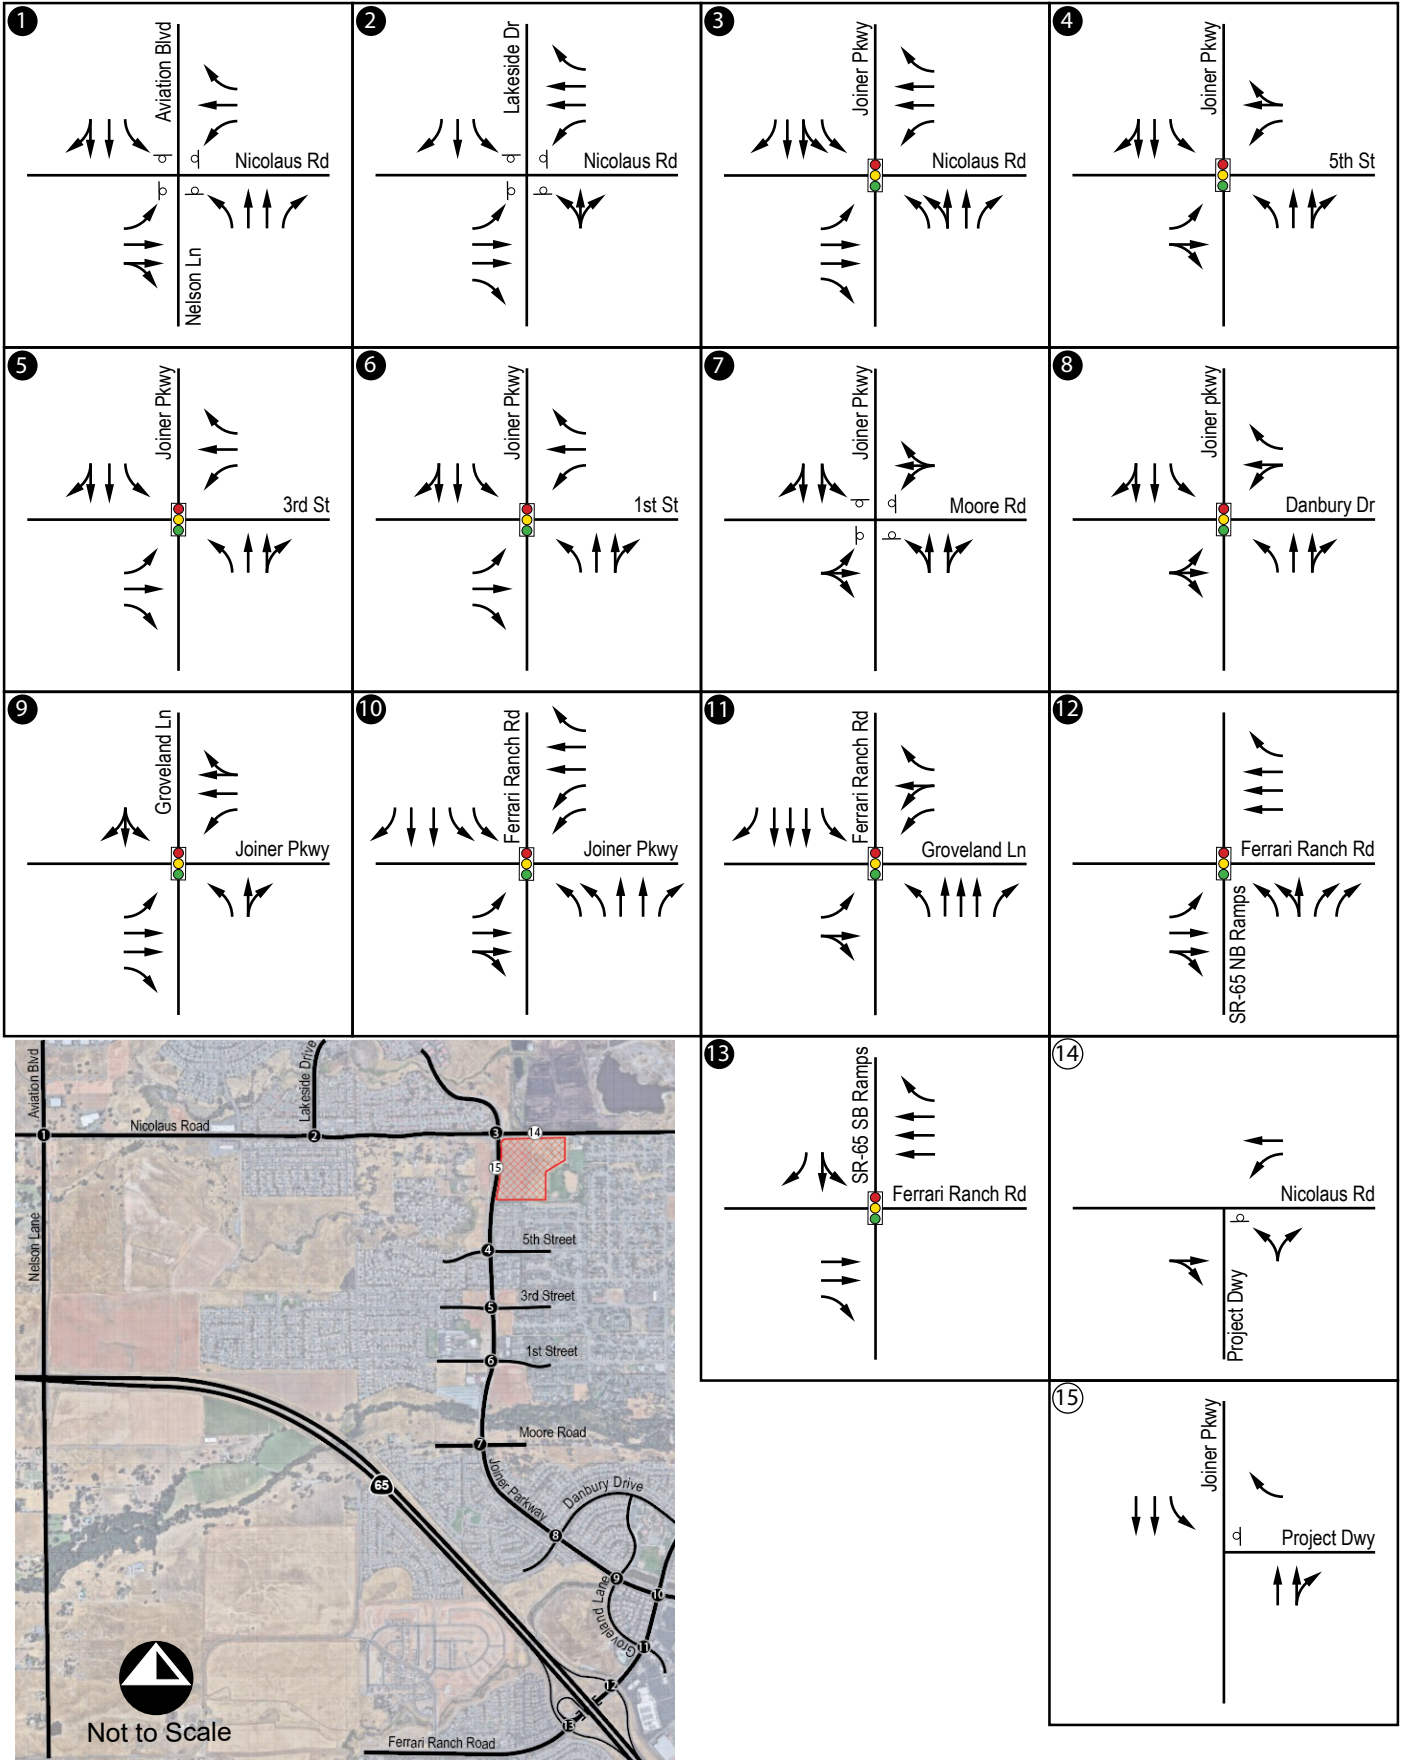

To determine the existing operations of the study intersections and roadway segments, peak hour intersection movement count and average daily traffic counts were collected on Wednesday, December 11, 2019. AM peak period counts were generally collected from 7:00 AM to 9:00 AM and PM peak period counts were generally collected from 4:00 PM to 6:00 PM. The counts used in this analysis were taken from the highest hour within the peak periods counted for each intersection. Traffic counts were collected while local schools were in session. Detailed count data is contained in **Appendix B**.

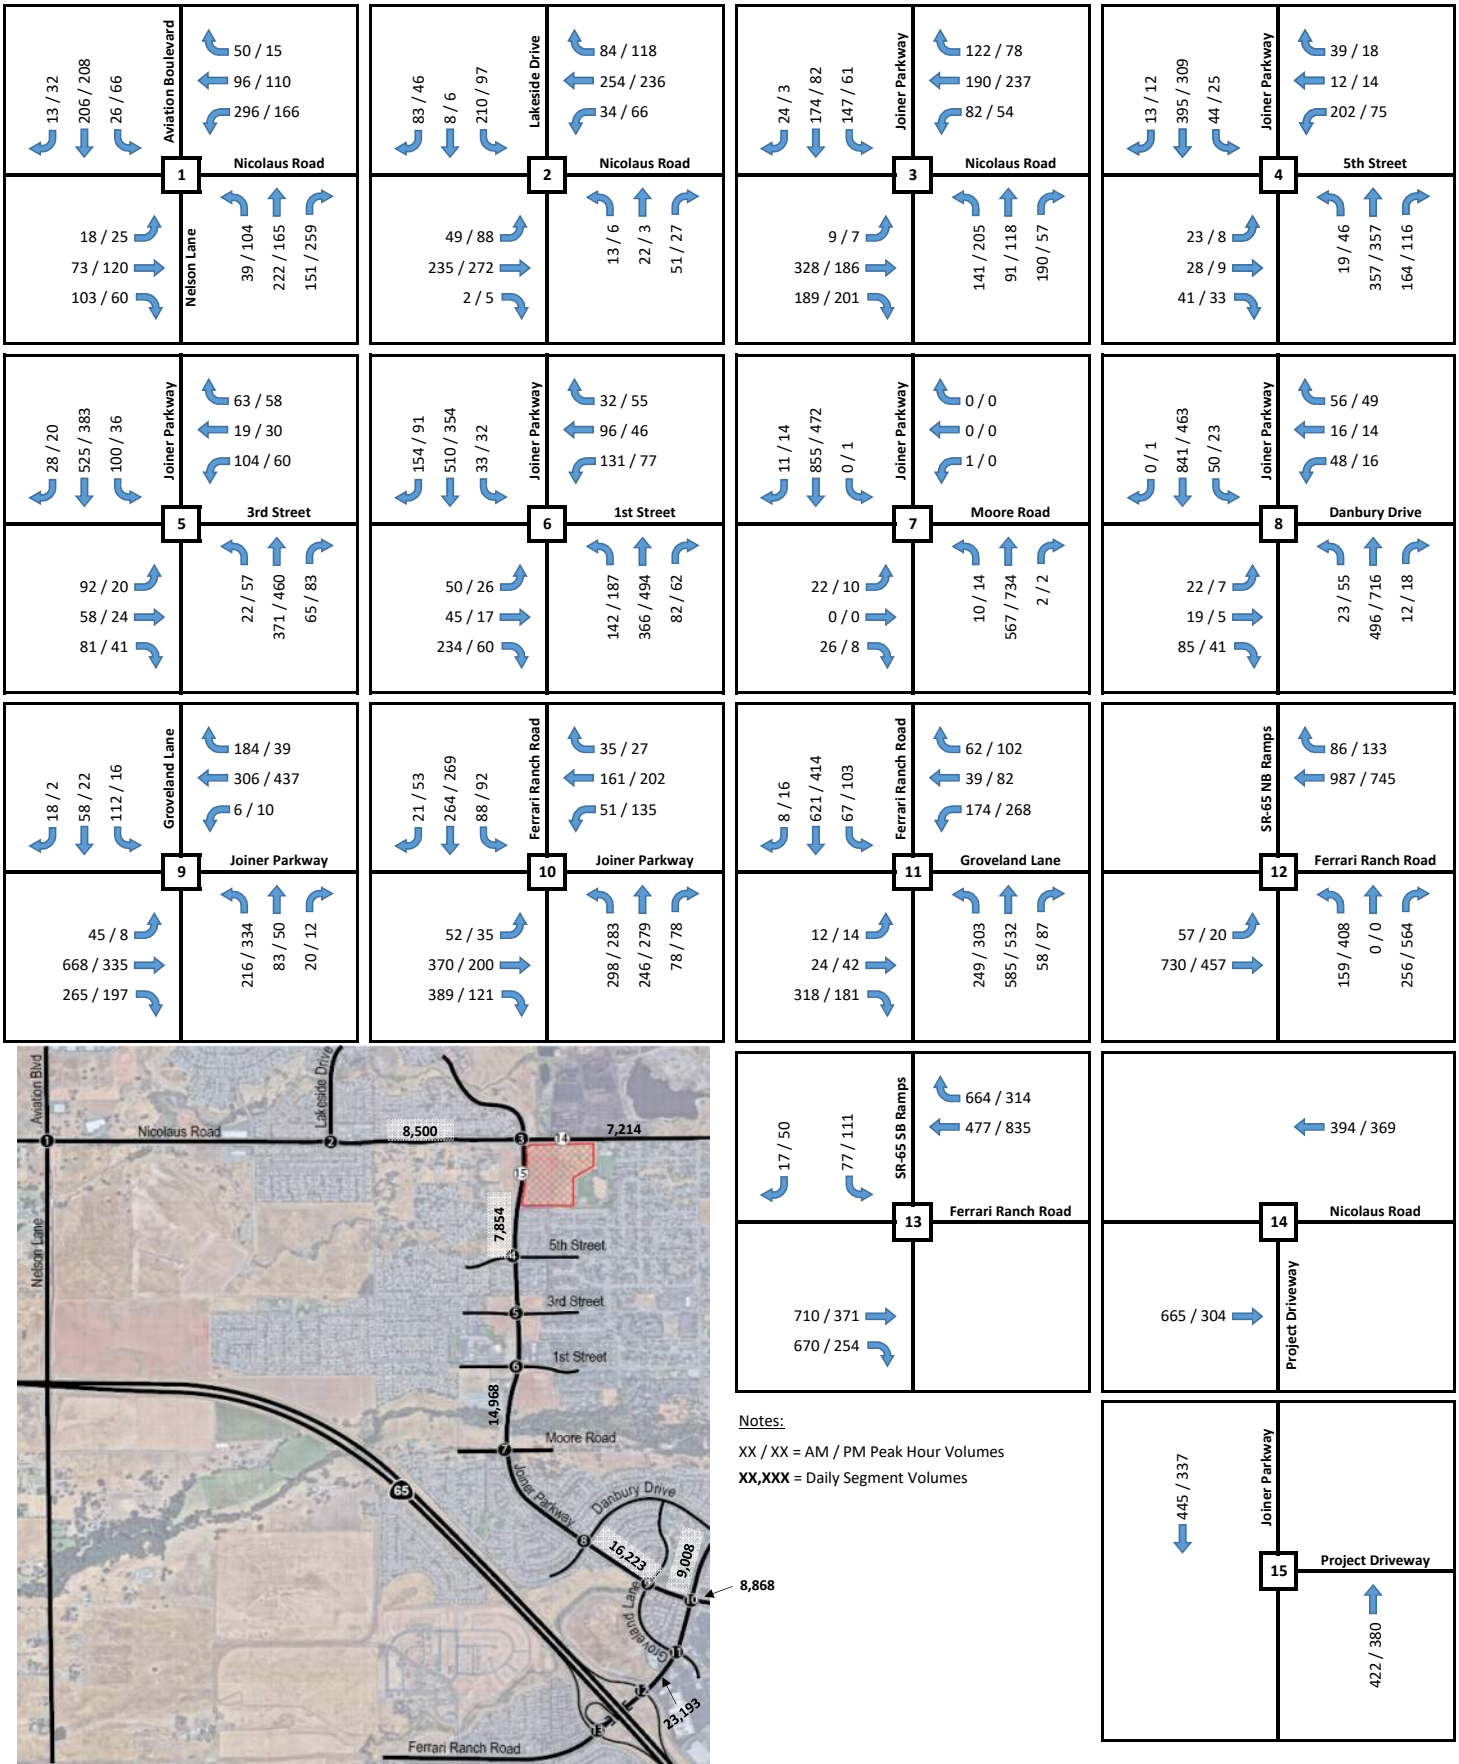

Exhibit 6 shows the Existing study intersection lane geometry. **Exhibit 7** shows the daily and peak hour volumes in the study area.

2.4 EXISTING PEAK HOUR STUDY INTERSECTION LOS

Table 3 summarizes existing conditions AM/PM peak hour level of service for all study intersections. Detailed analysis sheets are contained in **Appendix C**. Study intersections 1 and 2 are all-way stop controlled intersections with multiple lanes (3 to 4 lane) approaching the intersection. Therefore, SimTraffic reports are provided in Appendix C to obtain the delays at intersections 1 and 2 shown in Table 3. The remaining study intersection worksheets are reports from Synchro.

Notes:
 XX / XX = AM / PM Peak Hour Volumes
 XX,XXX = Daily Segment Volumes

TABLE 3. EXISTING AM/PM PEAK HOUR INTERSECTION LOS

Study Intersection		Traffic Control	Existing Conditions			
			AM		PM	
			Delay ¹	LOS	Delay ¹	LOS
1 -	Nicolaus Road / Nelson Lane	AWSC	12.1	B	10.4	B
2 -	Nicolaus Road / Lakeside Drive	AWSC	7.7	A	6.8	A
3 -	Joiner Parkway / Nicolaus Road	Signal	24.3	C	17.6	B
4 -	Joiner Parkway / 5th Street	Signal	20.5	C	12.4	B
5 -	Joiner Parkway / 3rd Street	Signal	17.2	B	13.8	B
6 -	Joiner Parkway / 1st Street	Signal	26.6	C	16.1	B
7 -	Joiner Parkway / Moore Road	AWSC	34.9	D	12.6	B
8 -	Joiner Parkway / Danbury Drive	Signal	17.7	B	14.4	B
9 -	Joiner Parkway / Groveland Lane	Signal	23.3	C	17.6	B
10-	Joiner Parkway / Ferrari Ranch Road	Signal	23.3	C	23.2	C
11-	Ferrari Ranch Road / Groveland Lane	Signal	35.8	D	37.4	D
12-	Ferrari Ranch Road / SR-65 Northbound Ramps	Signal	41.9	D	29.6	C
13-	Ferrari Ranch Road / SR-65 Southbound Ramps	Signal	5.3	A	6.0	A
14-	Nicolaus Road / Site Driveway #1	OWSC	Does Not Exist Without Project			
15-	Joiner Parkway / Site Driveway #2	OWSC	Does Not Exist Without Project			

Note: Deficient intersection operation indicated in **bold**.

¹Average seconds of delay per vehicle.

AWSC = All-Way Stop Control LOS = Level of Service OWSC = One-Way Stop Control

As shown in **Table 3**, all study intersections are currently operating at an acceptable level of service (LOS C or better) for Existing conditions except for:

- Int. #7 - Joiner Parkway / Moore Road: LOS D in the AM peak hour
- Int. #11 - Ferrari Ranch Road/Groveland Lane: LOS D in the AM and PM peak hours

It may be noted that LOS "D" is considered acceptable intersection operations at Caltrans facilities such as Ferrari Ranch Road / SR-65 Northbound and Southbound Ramps. LOS "E" and "F" is considered deficient intersection operating conditions at Caltrans facilities.

2.5 EXISTING ROADWAY SEGMENT LOS

Table 4 summarizes existing conditions average daily traffic level of service for all study roadway segments. The LOS “E” daily volume capacity for each segment is calculated as a “per lane” capacity. As such, the roadway segment analysis table shows the total LOS “E” capacity and the corresponding volume to capacity (V/C) ratio and LOS for each of the study segments. As shown in **Table 4**, all study roadway segments are currently operating at an acceptable level of service (LOS C or better) under Existing conditions.

TABLE 4. EXISTING CONDITIONS ROADWAY SEGMENT LOS

Segment	Location	Classification	LOSE Capacity Per Lane	# of Lanes	Total LOSE Capacity	Existing Conditions		
						ADT	V/C	LOS
Nicolaus Road	Lakeside Drive to Joiner Parkway	Arterial – High Access Control	10,000	4	40,000	8,500	0.21	A
	Joiner Parkway to O Street	Arterial - Moderate Access Control	9,000	2	18,000	7,214	0.40	A
Joiner Parkway	Nicolaus Road to 5th Street	Arterial – High Access Control	10,000	4	40,000	7,854	0.20	A
	1st Street to Moore Road	Arterial - High Access Control	10,000	4	40,000	14,968	0.37	A
	Danbury Drive to Groveland Lane	Arterial – High Access Control	10,000	4	40,000	16,223	0.41	A
	Ferrari Ranch Road to Lincoln Blvd	Arterial - High Access Control	10,000	4	40,000	8,868	0.22	A
Ferrari Ranch Road	Joiner Parkway to Danbury Drive	Arterial - High Access Control	10,000	4	40,000	9,008	0.23	A
	SR-65 NB Ramps to Groveland Lane	Arterial – High Access Control	10,000	6	60,000	23,193	0.39	A

Note: Deficient roadway segment operations shown in **bold**.

ADT= Average Daily Traffic; LOS= Level of Service; V/C= Volume to Capacity Ratio

3 PROPOSED PROJECT

The project proposes to construct 199 single-family dwelling units encompassing 25.5 acres located on the southeast corner of Joiner Parkway and Nicolaus Road. Project Opening Day is expected to be Year 2021. The project site is vacant and undeveloped.

Exhibit 2 shows the proposed project site plan.

3.1 PROJECT FORECAST TRIP GENERATION

In order to calculate vehicle trips forecast to be generated by the proposed projects, the *Institute of Transportation Engineers (ITE) 10th Edition Trip Generation Manual* trip generation rates were utilized.

Table 5 summarizes the ITE trip generation rates used.

TABLE 5. ITE TRIP GENERATION RATES

Land Use	ITE Code ¹	Daily Trip Rate	AM Peak Hour Rate			PM Peak Hour Rate		
			Total	In	Out	Total	In	Out
Single Family Dwelling Unit	210	9.84/DU	0.73/DU	25%	75%	0.99/DU	63%	37%

¹Source: ITE Trip Generation Manual, 10th Edition.

Table 6 summarizes the project trip generation using the rates shown in **Table 5**. As shown, the proposed project is forecast to generate approximately 1,958 daily trips with 146 AM peak hour trips (36 inbound and 110 outbound) and 197 PM peak hour trips (124 inbound and 73 outbound).

TABLE 6. PROPOSED PROJECT TRIP GENERATION

Land Use	Intensity	Daily Trips	AM Peak Hour Trips			PM Peak Hour Trips		
			Total	In	Out	Total	In	Out
Single Family Dwelling Unit	199 DU	1,958	146	36	110	197	124	73

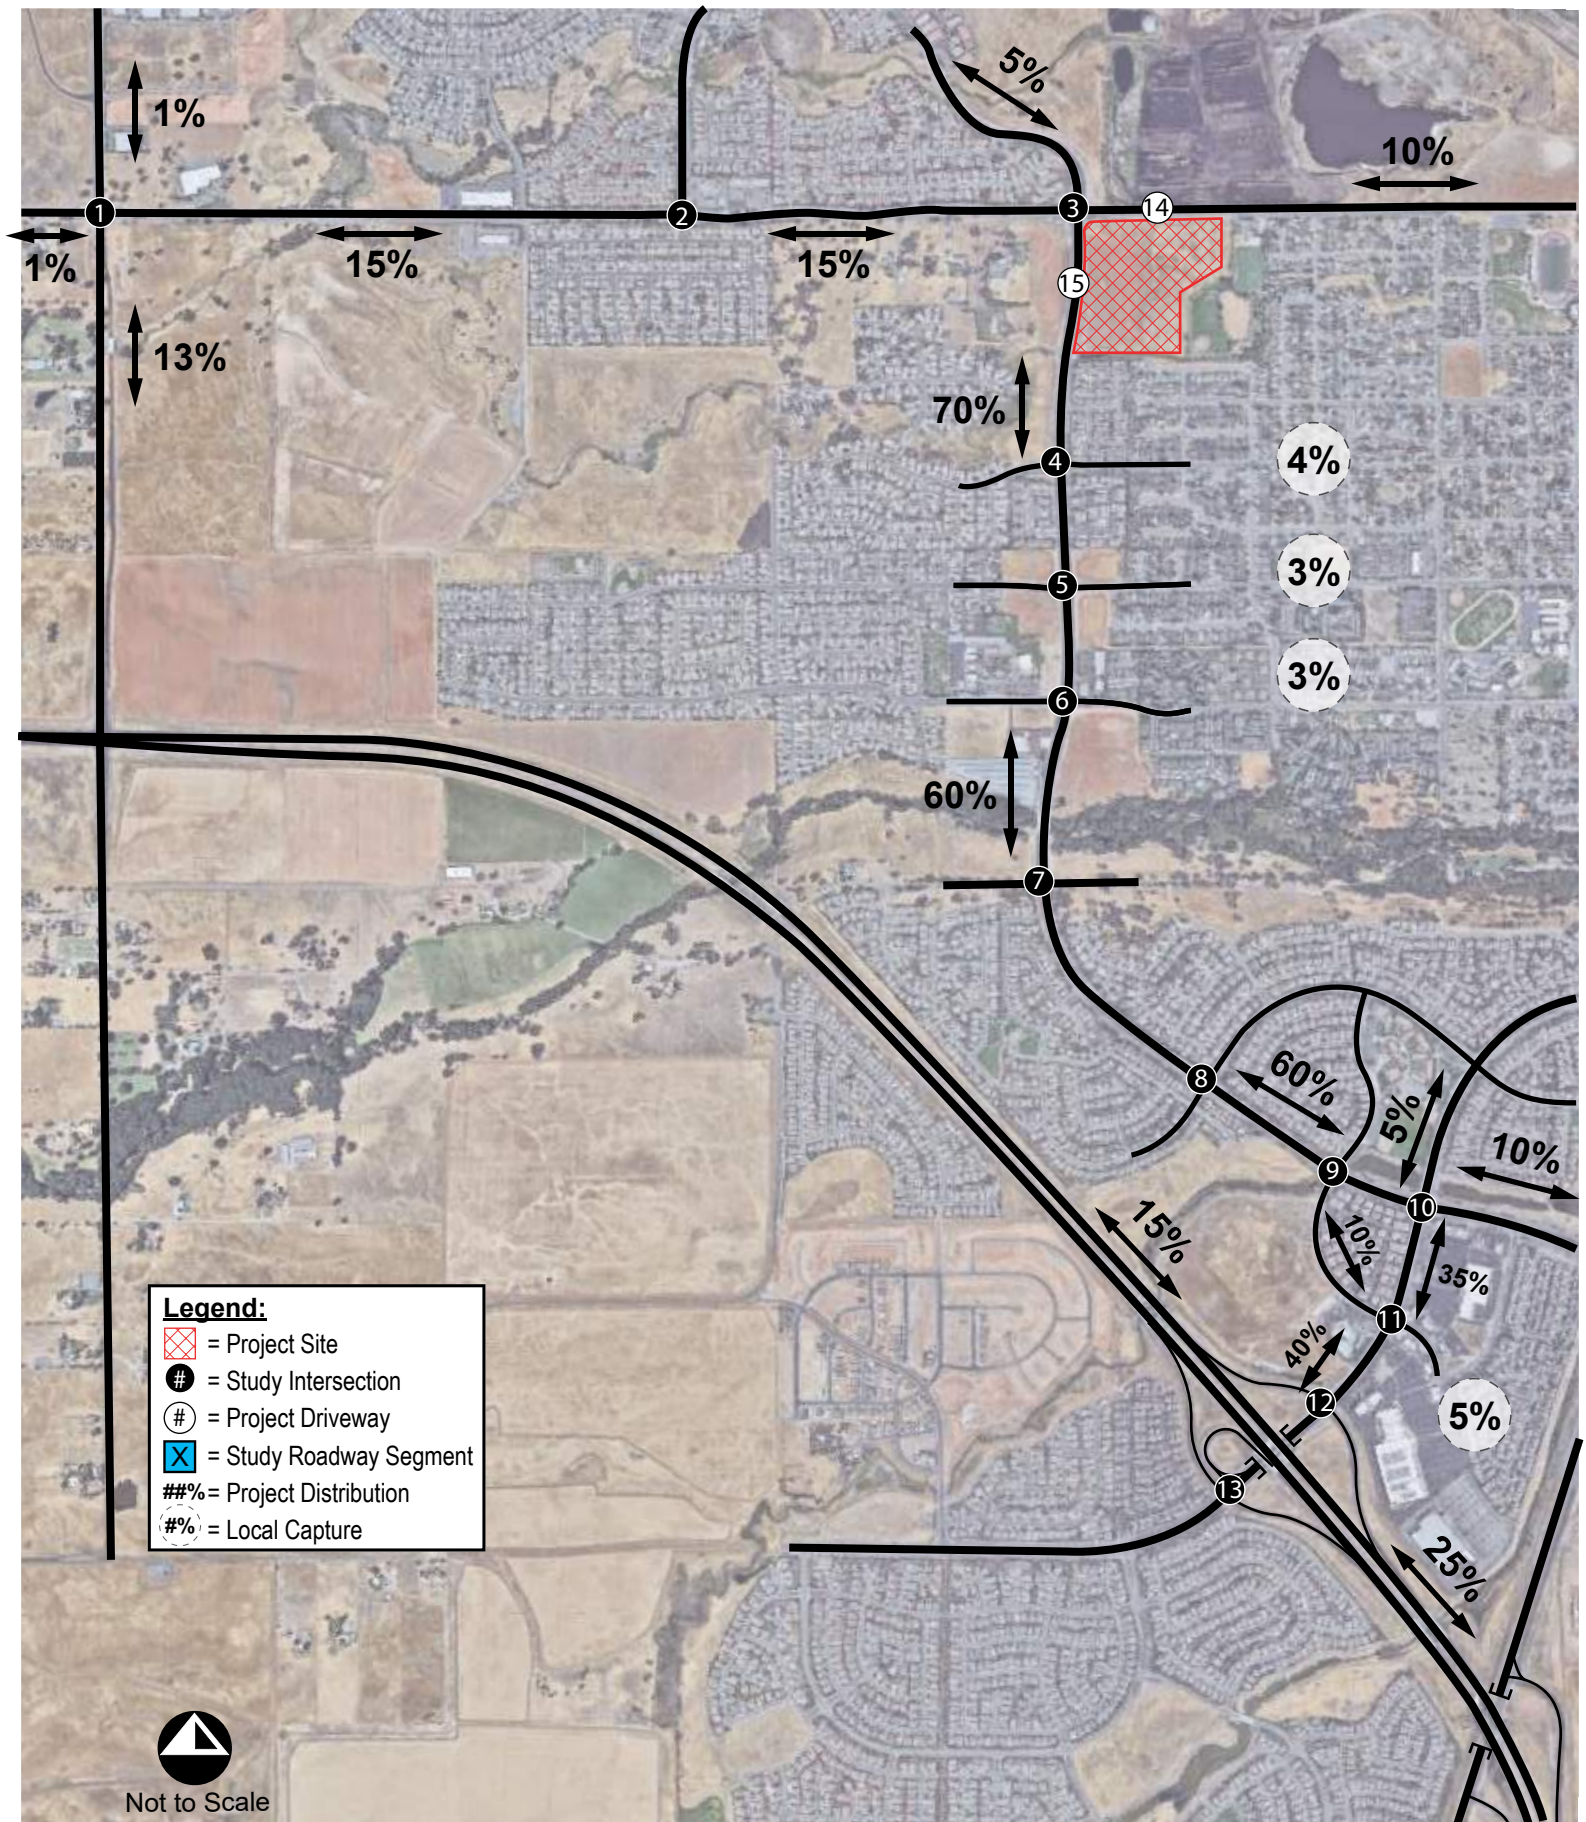

DU = Dwelling Unit

3.2 TRIP DISTRIBUTION AND TRIP ASSIGNMENT OF PROPOSED PROJECT

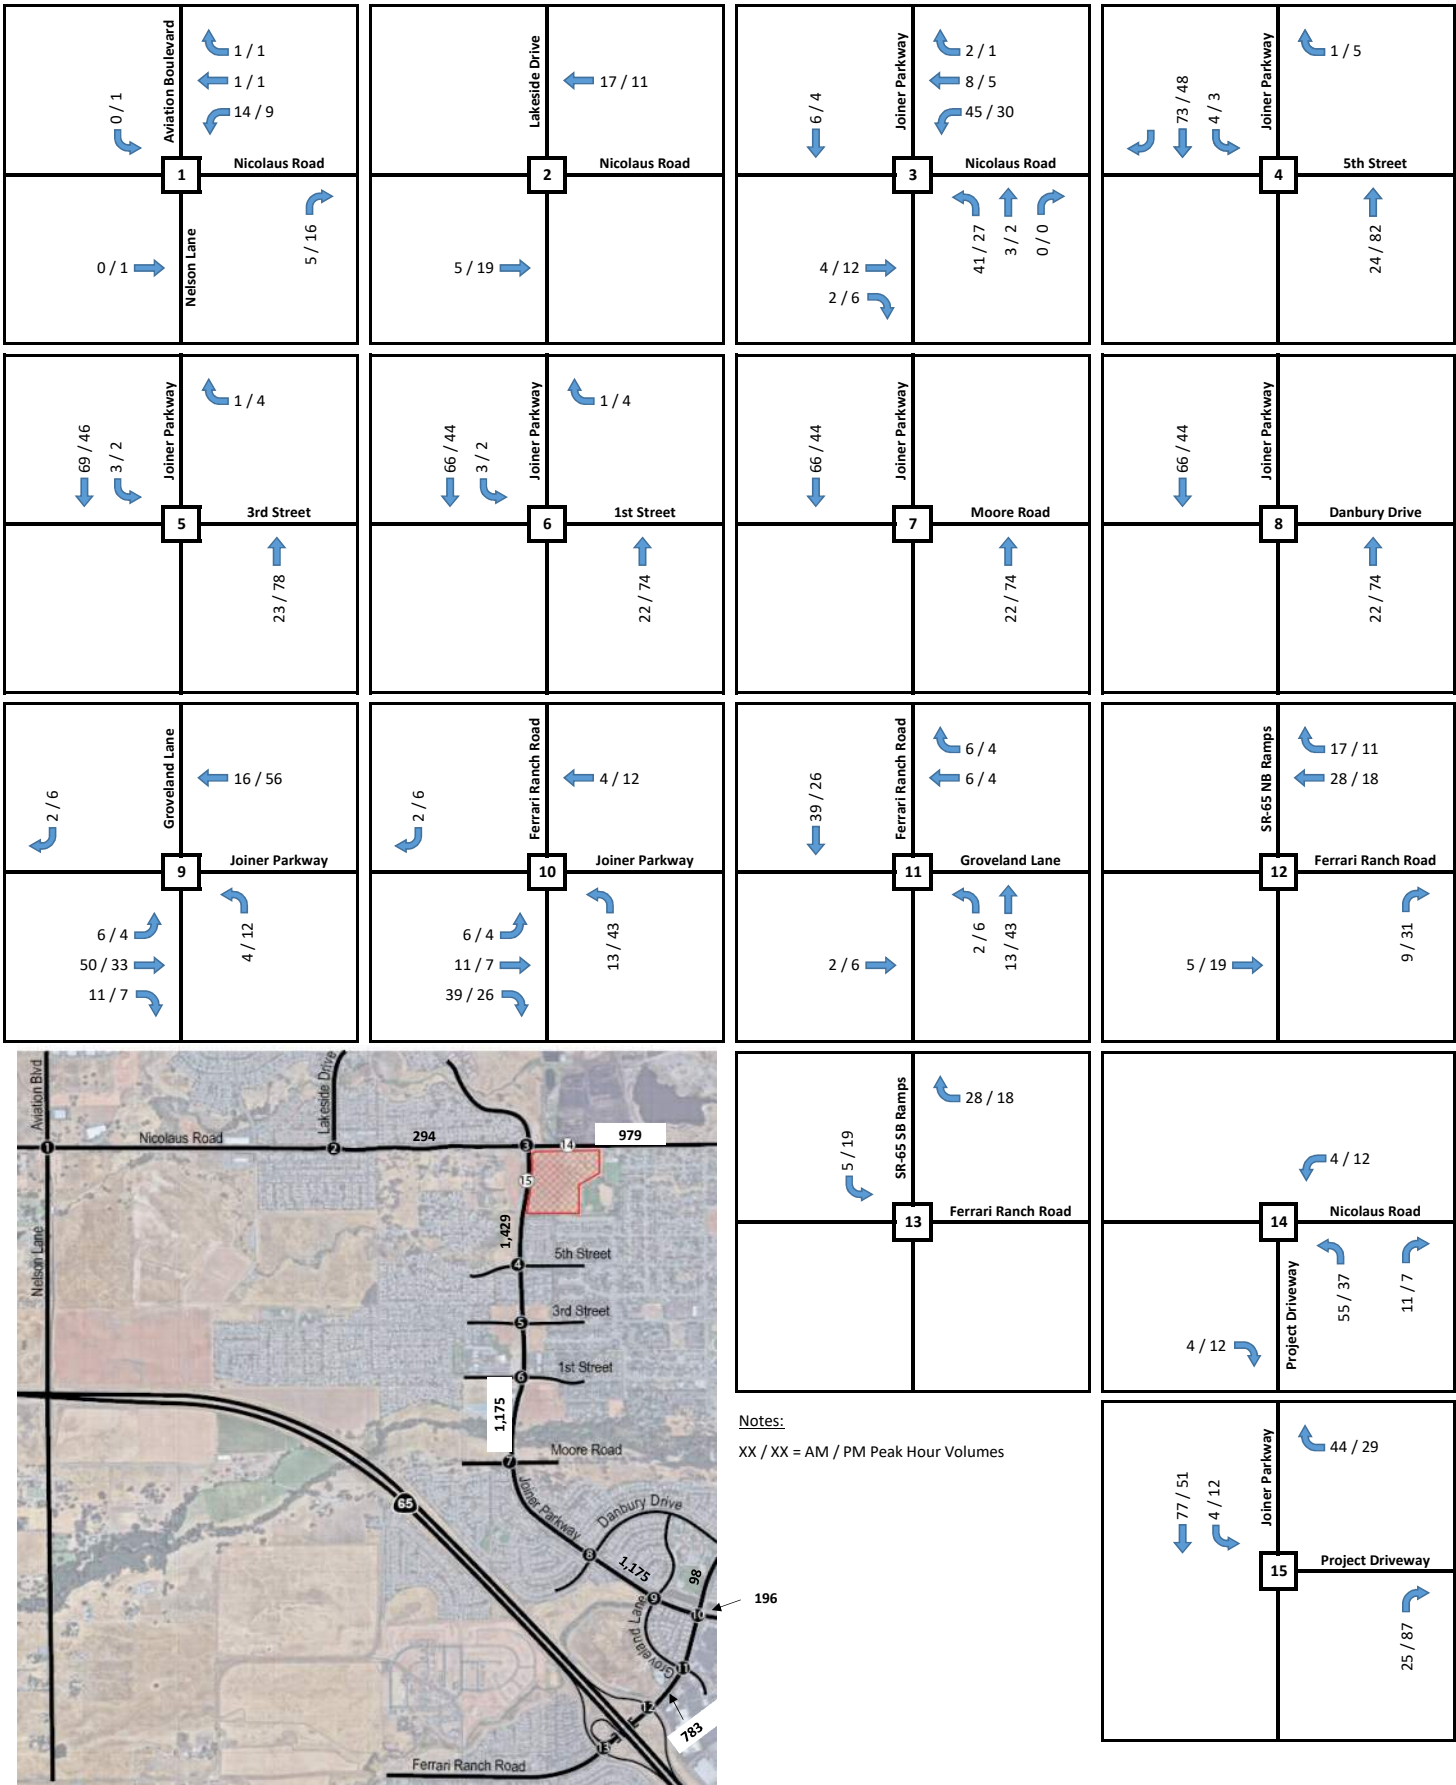

Exhibit 8 shows the forecast trip percent distribution within the study area. Project traffic was distributed on the roadway network based on existing travel patterns, complementary land uses (employment, retail and schools) within the study area and discussions with City staff. As shown in Exhibit 7, project traffic is anticipated to distribute:

- 70% to and from the south on Joiner Parkway;
- 5% to and from the north on Joiner Parkway;
- 10% to and from the east on Nicolaus Road; and
- 15% to and from the west on Nicolaus Road.

Exhibit 9 shows the corresponding forecast assignment of daily and peak hour project-generated trips using the trip percent distribution shown in **Exhibit 7**.

Not to Scale

4 EXISTING PLUS PROJECT

4.1 EXISTING PLUS PROJECT TRAFFIC VOLUMES

Existing Plus Project traffic volumes are derived by adding trips forecast to be generated by the proposed project to existing traffic volumes.

Exhibit 10 shows the forecast Existing Plus Project daily and peak hour volumes.

4.2 EXISTING PLUS PROJECT PEAK HOUR STUDY INTERSECTION LOS

Table 7 summarizes Existing Plus Project AM and PM peak hour level of service for all study intersections. Detailed analysis sheets are contained in **Appendix D**.

TABLE 7. EXISTING PLUS PROJECT AM/PM PEAK HOUR INTERSECTION LOS

Study Intersection	Existing Conditions				Existing Plus Project Conditions				Change in Delay (sec.)		Significant Impact?	
	AM		PM		AM		PM		AM	PM	AM	PM
	Delay ¹	LOS	Delay ¹	LOS	Delay ¹	LOS	Delay ¹	LOS				
1 Nicolaus Road/Nelson Lane	12.1	B	10.4	B	12.7	B	10.7	B	0.6	0.3	No	No
2 Nicolaus Road/Lakeside Drive	7.7	A	6.8	A	7.7	A	6.9	A	0.0	0.1	No	No
3 Joiner Parkway/Nicolaus Road	24.3	C	17.6	B	27.7	C	18.3	B	3.4	0.7	No	No
4 Joiner Parkway/5th Street	20.5	C	12.4	B	20.9	C	12.4	B	0.4	0.0	No	No
5 Joiner Parkway/3rd Street	17.2	B	13.8	B	17.7	B	13.8	B	0.5	0.0	No	No
6 Joiner Parkway/1st Street	26.6	C	16.1	B	27.9	C	16.2	B	1.3	0.1	No	No
7 Joiner Parkway/Moore Road	34.9	D	12.6	B	47.0	E	13.8	B	12.1	1.2	No	No
8 Joiner Parkway/Danbury Drive	17.7	B	14.4	B	18.2	B	14.7	B	0.5	0.3	No	No
9 Joiner Parkway/Groveland Lane	23.3	C	17.6	B	24.0	C	18.4	B	0.7	0.8	No	No
10 Joiner Parkway/Ferrari Ranch Rd	23.3	C	23.2	C	23.6	C	23.6	C	0.3	0.4	No	No
11 Ferrari Ranch Rd/Groveland Lane	35.8	D	37.4	D	36.3	D	38.9	D	0.5	1.5	No	No
12 Ferrari Ranch Rd/SR-65 NB Ramps	41.9	D	29.6	C	45.7	D	29.7	C	3.8	0.1	No	No
13 Ferrari Ranch Rd/SR-65 SB Ramps	5.3	A	6.0	A	5.4	A	6.2	A	0.1	0.2	No	No
14 Nicolaus Road/Site Driveway #1	Does Not Exist				1.6	A	1.1	A	1.6	1.1	No	No
15 Joiner Parkway/Site Driveway #2	Does Not Exist				0.5	A	0.4	A	0.5	0.4	No	No

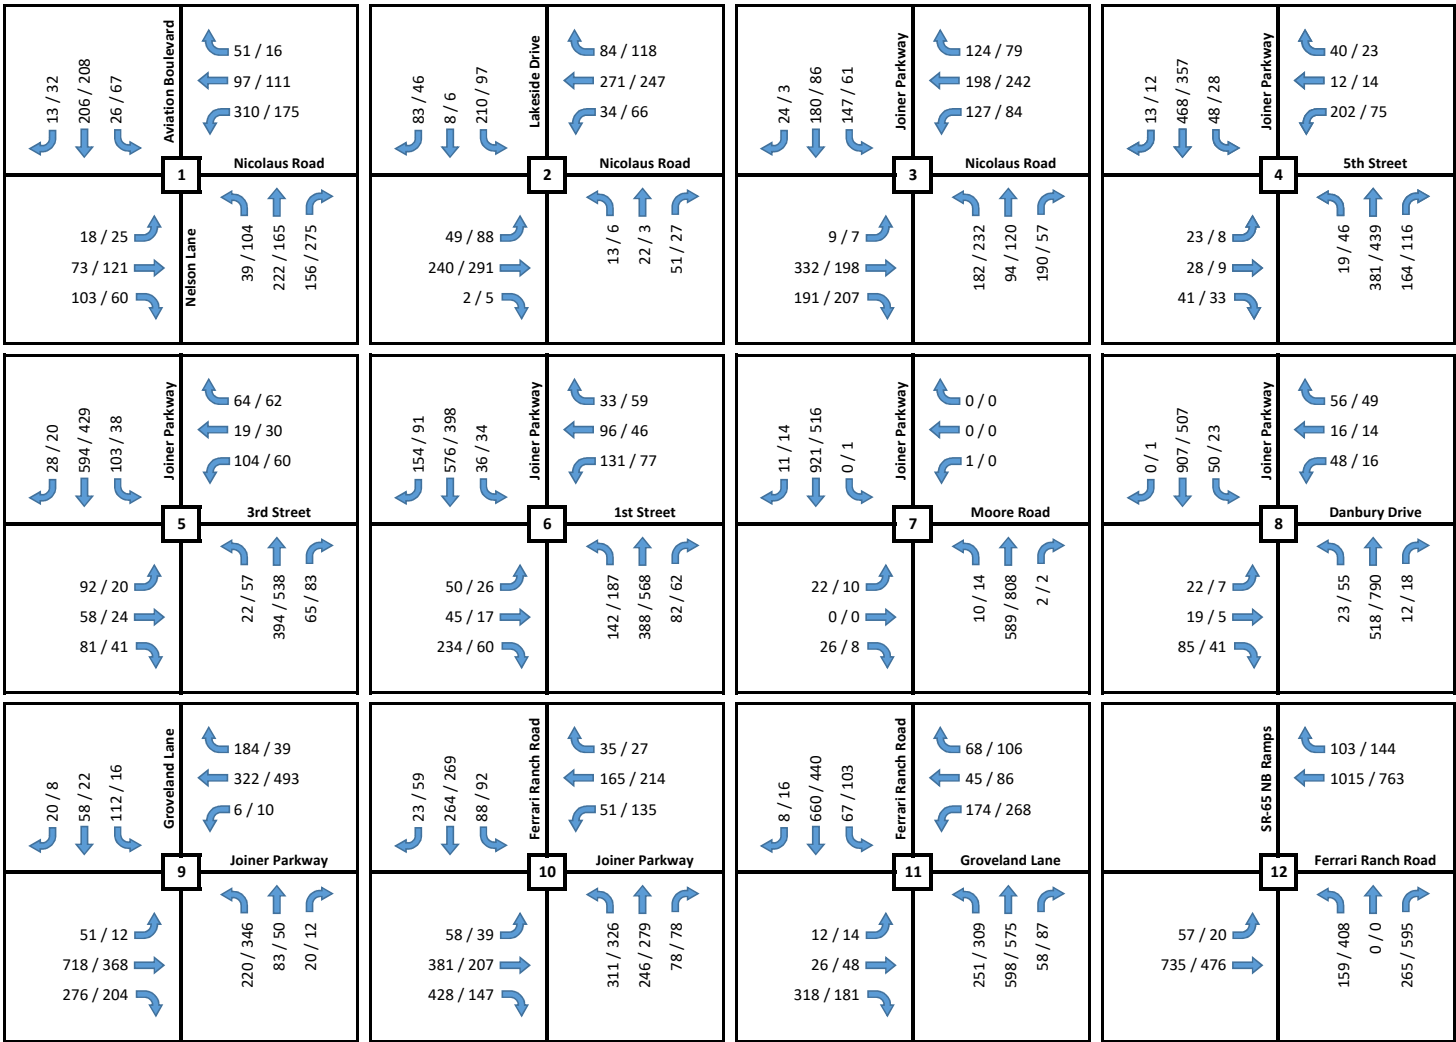

Note: Deficient intersection operation indicated in **bold**.

¹Seconds of delay per vehicle.

LOS = level of service.

As shown in **Table 7**, all study intersections are forecast to operate at an acceptable level of service (LOS D or better) during the peak hour with the addition of project-related traffic to existing traffic volumes except for the following study intersections:

- Int. #7 – Joiner Parkway / Moore Road: LOS E in the AM Peak Hour
- Int. #11 – Ferrari Ranch Road / Groveland Lane: LOS D in the AM & PM Peak Hour

Notes:
 XX / XX = AM / PM Peak Hour Volumes

At the all-way stop controlled intersection of Joiner Parkway / Moore Road, the operations are deficient (LOS D & E) in the AM peak hour without and with project traffic and exceeds the 2.5 second delay threshold. However, project-related traffic does not result in a significant impact at this location since a signal warrant is not met. Refer to Section 1.2.1 of this report and **Appendix J** for further detail on signal warrant analysis. Therefore, project traffic at this intersection is considered less-than-significant and no mitigation is required.

At the signalized intersection of Ferrari Ranch Road / Groveland Lane, intersection operations are deficient in both the AM and PM peak hour. However, the change in delay is 0.5 and 1.5 seconds for the AM and PM respectively which falls below the 4.0 second threshold of significance. Therefore, project traffic at this intersection is considered less-than-significant and no mitigation is required.

4.3 EXISTING PLUS PROJECT ROADWAY SEGMENT LOS

Table 8 summarizes the roadway segment level of service for the Existing Plus Project condition.

TABLE 8. EXISTING PLUS PROJECT ROADWAY SEGMENT LOS

Segment	Location	Total LOSE Capacity	Existing			Existing Plus Project			Δ V/C	Project ADT	Significant Direct Impact?
			ADT	V/C	LOS	ADT	V/C	LOS			
Nicolaus Road	Lakeside Drive to Joiner Parkway	40,000	8,500	0.21	A	8,794	0.22	A	0.007	294	No
	Joiner Parkway to O Street	18,000	7,214	0.40	A	8,193	0.46	A	0.054	979	No
Joiner Parkway	Nicolaus Road to 5th Street	40,000	7,854	0.20	A	9,283	0.23	A	0.036	1429	No
	1st Street to Moore Road	40,000	14,968	0.37	A	16,143	0.40	A	0.029	1175	No
	Danbury Drive to Groveland Lane	40,000	16,223	0.41	A	17,398	0.43	A	0.029	1175	No
	Ferrari Ranch Road to Lincoln Blvd	40,000	8,868	0.22	A	9,064	0.23	A	0.005	196	No
Ferrari Ranch Road	Joiner Parkway to Danbury Drive	40,000	9,008	0.23	A	9,106	0.23	A	0.002	98	No
	SR-65 NB Ramps to Groveland Lane	60,000	23,193	0.39	A	23,976	0.40	A	0.013	783	No

Note: Deficient roadway segment operations shown in **bold**.

LOS= Level of Service; V/C= Volume to Capacity Ratio; Δ= Difference

As shown in **Table 8**, all study roadway segments are currently operating at an acceptable level of service (LOS C or better) for Existing Plus Project conditions. Therefore, no mitigation measures are necessary or required.

5 EXISTING PLUS APPROVED/PENDING PROJECTS WITHOUT PROJECT CONDITIONS

5.1 EXISTING PLUS APPROVED/PENDING PROJECTS WITHOUT PROJECT TRAFFIC VOLUMES

According to the City's Development Project Map, the traffic analysis assumes three approved or pending projects would contribute traffic to the study area. These projects include Fullerton Ranch (approved), Independence (approved) and Lincoln Crossing Village 11 (under construction). These three projects were reviewed and approved by City staff to include in the Existing Plus Approved/Pending Project analysis scenario. Worksheets summarizing the methodology for developing the baseline volumes and information on approved/pending projects is provided in **Appendix E**.

Traffic volumes from these three projects were extracted from traffic studies, EIRs, or other documents and added to existing traffic volumes. Traffic generated by the Lincoln Crossing Village 11 project was manually distributed to the study intersections based on existing travel patterns and complementary land uses such as employment, retail and schools since the documents prepared for this project are part of a larger Specific Plan and considered outdated. **Table 9** provides a project description of the three approved/pending projects and the trip generation from these projects.

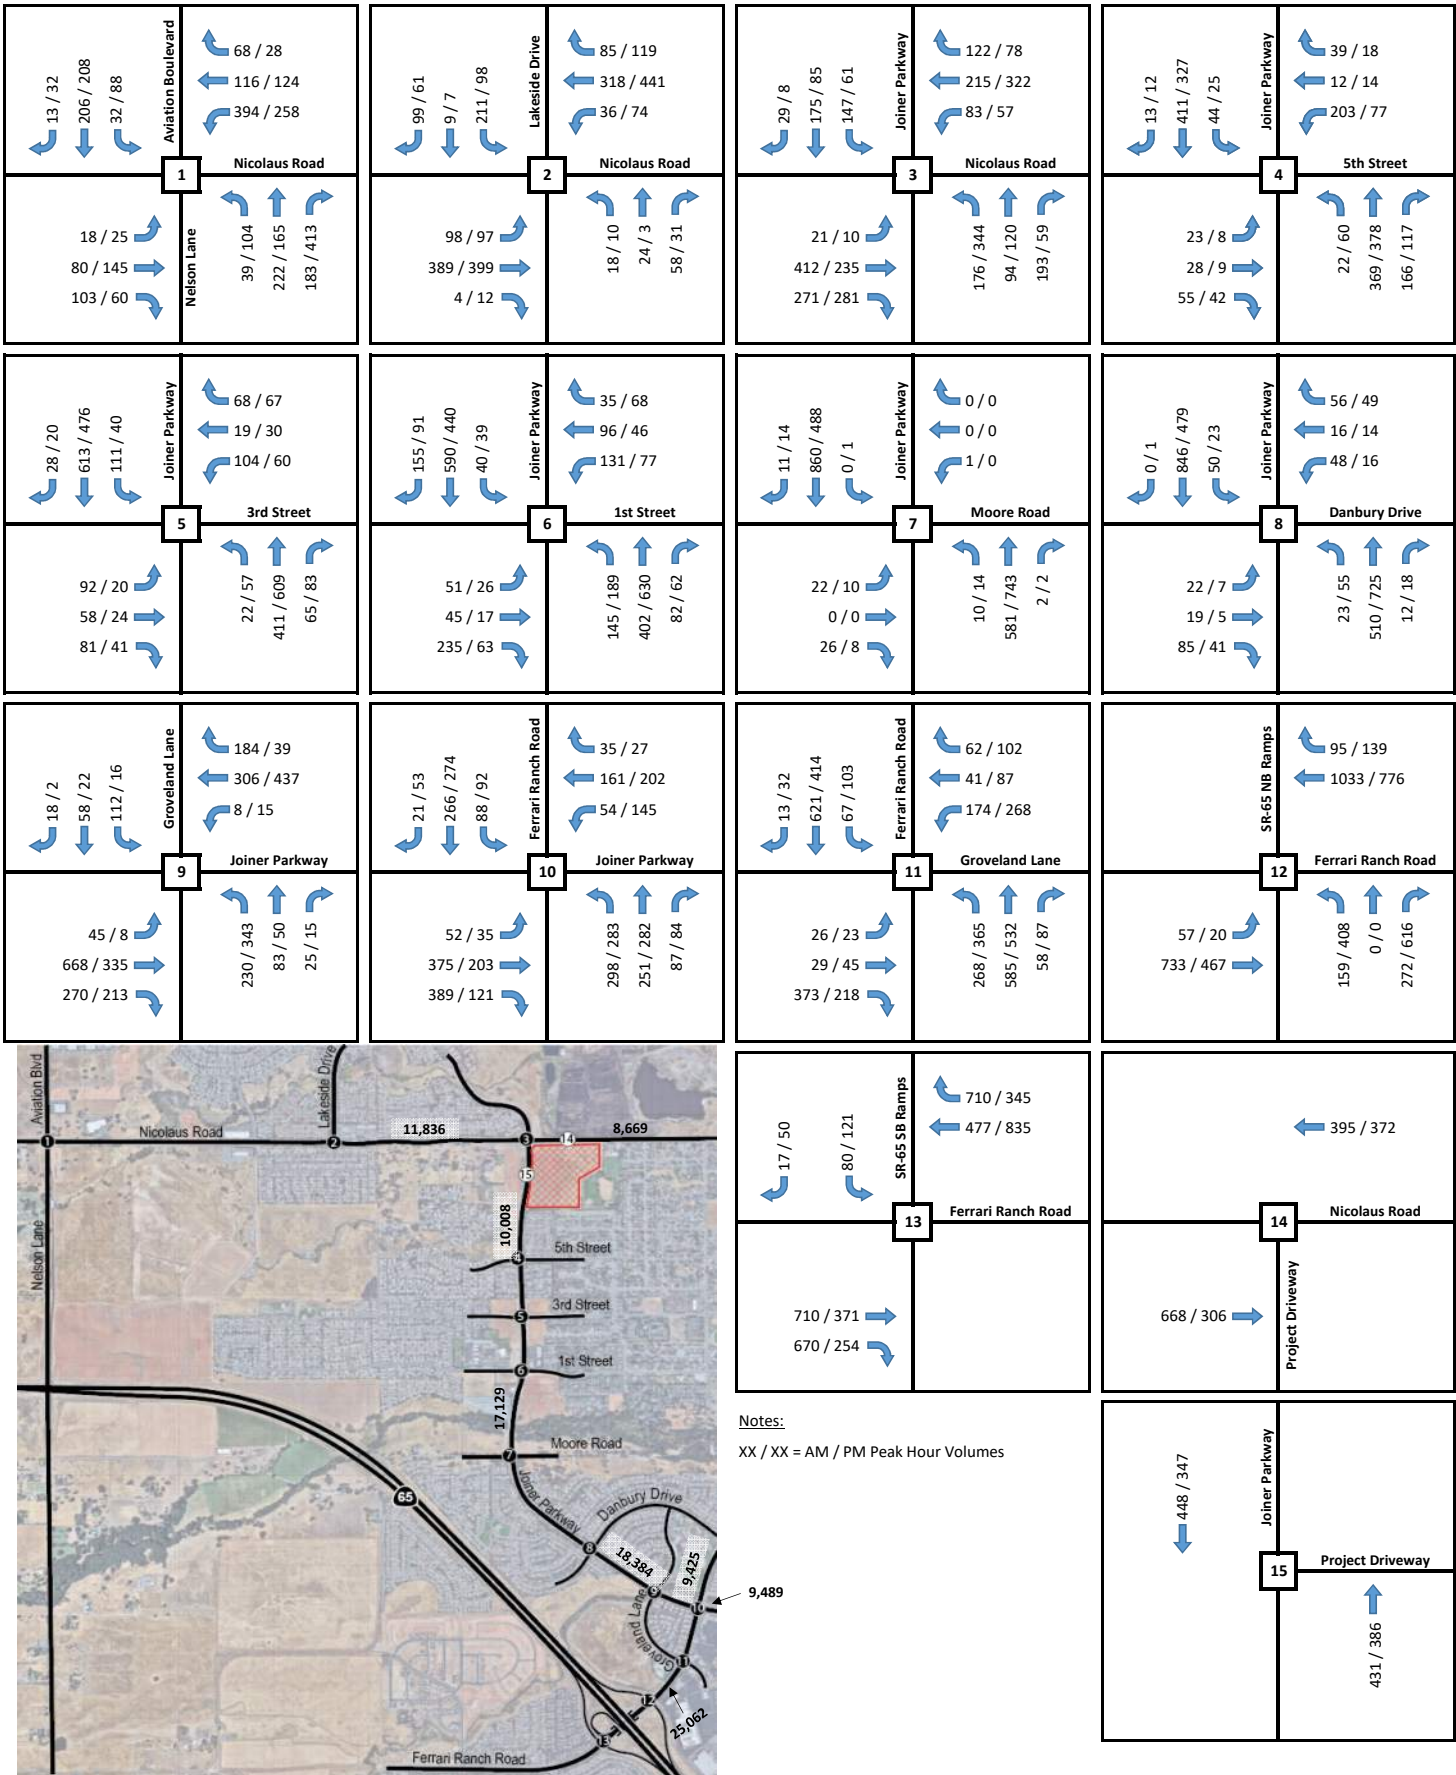

TABLE 9. APPROVED & PENDING PROJECTS TRIP GENERATION TABLE

Project	Jurisdiction	Land Use	Intensity	ADT	AM Peak Hour			PM Peak Hour		
					Total	In	Out	Total	In	Out
1 Independence	City of Lincoln	Single Family Residential	575 DU	5,475	431	108	323	576	362	213
		Multi-Family Residential	54 DU	359	28	6	22	34	22	12
		Sports Fields	2 Soccer Fields	70	0	0	0	35	25	10
		Total Vehicle Trips			5,904	459	114	345	645	409
2 Fullerton Ranch	City of Lincoln	Single Family Residential	81 DU	771	61	15	46	81	51	30
3 Lincoln Crossing Village 11	City of Lincoln	Single Family Residential	166 DU	1,657	123	31	92	165	104	61
Total Cumulative Project Trips				8,332	643	160	483	891	564	326

DU = Dwelling Unit

As shown, the three approved/pending projects would generate approximately 8,332 daily trips with 643 AM peak hour trips and 891 PM peak hour trips.

Exhibit 11 shows the Existing Plus Approved/Pending Projects Without Project daily and peak hour volumes.

Notes:
 XX / XX = AM / PM Peak Hour Volumes

5.2 EXISTING PLUS APPROVED/PENDING PROJECTS WITHOUT PROJECT PEAK HOUR STUDY INTERSECTION LOS

Table 10 summarizes Existing Plus Approved/Pending Projects Without Project AM and PM peak hour level of service for all study intersections. Detailed analysis sheets are contained in **Appendix F**.

TABLE 10. EXISTING PLUS APPROVED/PENDING PROJECTS WITHOUT PROJECT AM/PM PEAK HOUR INTERSECTION LOS

Study Intersection		Traffic Control	Existing Plus Approved/Pending Projects Conditions			
			AM		PM	
			Delay ¹	LOS	Delay ¹	LOS
1	Nicolaus Road / Nelson Lane	AWSC	26.8	D	16.0	C
2	Nicolaus Road / Lakeside Drive	AWSC	9.4	A	8.3	A
3	Joiner Parkway / Nicolaus Road	Signal	27.6	C	19.3	B
4	Joiner Parkway / 5th Street	Signal	20.9	C	12.7	B
5	Joiner Parkway / 3rd Street	Signal	18.0	B	13.9	B
6	Joiner Parkway / 1st Street	Signal	28.6	C	16.4	B
7	Joiner Parkway / Moore Road	AWSC	36.3	E	12.8	B
8	Joiner Parkway / Danbury Drive	Signal	17.8	B	14.4	B
9	Joiner Parkway / Groveland Lane	Signal	24.1	C	18.0	B
10	Joiner Parkway / Ferrari Ranch Road	Signal	23.3	C	23.3	C
11	Ferrari Ranch Road / Groveland Lane	Signal	46.4	D	61.8	E
12	Ferrari Ranch Road / SR-65 NB Ramps	Signal	48.5	D	29.8	C
13	Ferrari Ranch Road / SR-65 SB Ramps	Signal	5.4	A	6.1	A
14	Nicolaus Road / Site Driveway #1	OWSC	Does Not Exist Without Project			
15	Joiner Parkway / Site Driveway #2	OWSC	Does Not Exist Without Project			

Note: Deficient intersection operation indicated in **bold**.

¹Average seconds of delay per vehicle.

AWSC = All-Way Stop Control; LOS = Level of Service; OWSC = One-Way Stop Control

As shown in **Table 10**, all study intersections are forecast to operate at an acceptable level of service (LOS C or better) during the peak hours except for the following study intersections:

- Int. #1 – Nicolaus Road / Nelson Lane: LOS D in the AM Peak Hour
- Int. #7 – Joiner Parkway / Moore Road: LOS E in the AM Peak Hour
- Int. #11 – Ferrari Ranch Road / Groveland Lane: LOS D in the AM & E in the PM Peak Hour

Intersections #14 and #15 are project driveways and do not exist without the proposed Joiner Ranch East project. It may be noted that LOS “D” is considered acceptable intersection operations at Caltrans facilities such as Ferrari Ranch Road / SR-65 Northbound and Southbound Ramps. LOS “E” and “F” is considered deficient intersection operating conditions at Caltrans facilities.

53 EXISTING PLUS APPROVED/PENDING PROJECTS WITHOUT PROJECT ROADWAY SEGMENT LOS

Table 11 summarizes Existing Plus Approved/Pending Projects Without Project conditions roadway segment operations.

TABLE 11. EXISTING PLUS APPROVED/PENDING PROJECTS WITHOUT PROJECT ROADWAY SEGMENT LOS

Segment	Location	Classification	LOSE Capacity Per Lane	# of Lanes	Total LOSE Capacity	Existing Plus Approved/Pending Projects		
						ADT	V/C	LOS
Nicolaus Road	Lakeside Drive to Joiner Parkway	Arterial - High Access Control	10,000	4	40,000	11,836	0.30	A
	Joiner Parkway to O Street	Arterial - Moderate Access Control	9,000	2	18,000	8,669	0.48	A
Joiner Parkway	Nicolaus Road to 5th Street	Arterial - High Access Control	10,000	4	40,000	10,008	0.25	A
	1st Street to Moore Road	Arterial - High Access Control	10,000	4	40,000	17,129	0.43	A
	Danbury Drive to Groveland Lane	Arterial - High Access Control	10,000	4	40,000	18,384	0.46	A
	Ferrari Ranch Road to Lincoln Blvd	Arterial - High Access Control	10,000	4	40,000	9,489	0.24	A
Ferrari Ranch Road	Joiner Parkway to Danbury Drive	Arterial - High Access Control	10,000	4	40,000	9,425	0.24	A
	SR-65 NB Ramps to Groveland Lane	Arterial - High Access Control	10,000	6	60,000	25,062	0.42	A

Note: Deficient roadway segment operations shown in **bold**.

ADT= Average Daily Traffic; LOS= Level of Service; V/C= Volume to Capacity Ratio

As shown in **Table 11**, all study roadway segments operate at an acceptable level of service (LOS C or better) for Existing Plus Approved/Pending Projects Without Project conditions.

6 EXISTING PLUS APPROVED/PENDING PROJECTS PLUS PROJECT CONDITIONS

6.1 EXISTING PLUS APPROVED/PENDING PROJECTS PLUS PROJECT TRAFFIC VOLUMES

Existing Plus Approved/Pending Projects Plus Project traffic volumes are derived by adding trips forecast to be generated by the proposed project to Existing Plus Approved/Pending Projects Without Project traffic volumes.

Exhibit 12 shows the Existing Plus Approved/Pending Projects Plus Project daily and peak hour volumes.

6.2 EXISTING PLUS APPROVED/PENDING PROJECTS PLUS PROJECT PEAK HOUR STUDY INTERSECTION LOS

Table 12 summarizes Existing Plus Approved/Pending Projects Plus Project AM and PM peak hour level of service for all study intersections. Detailed analysis sheets are contained in **Appendix G**.

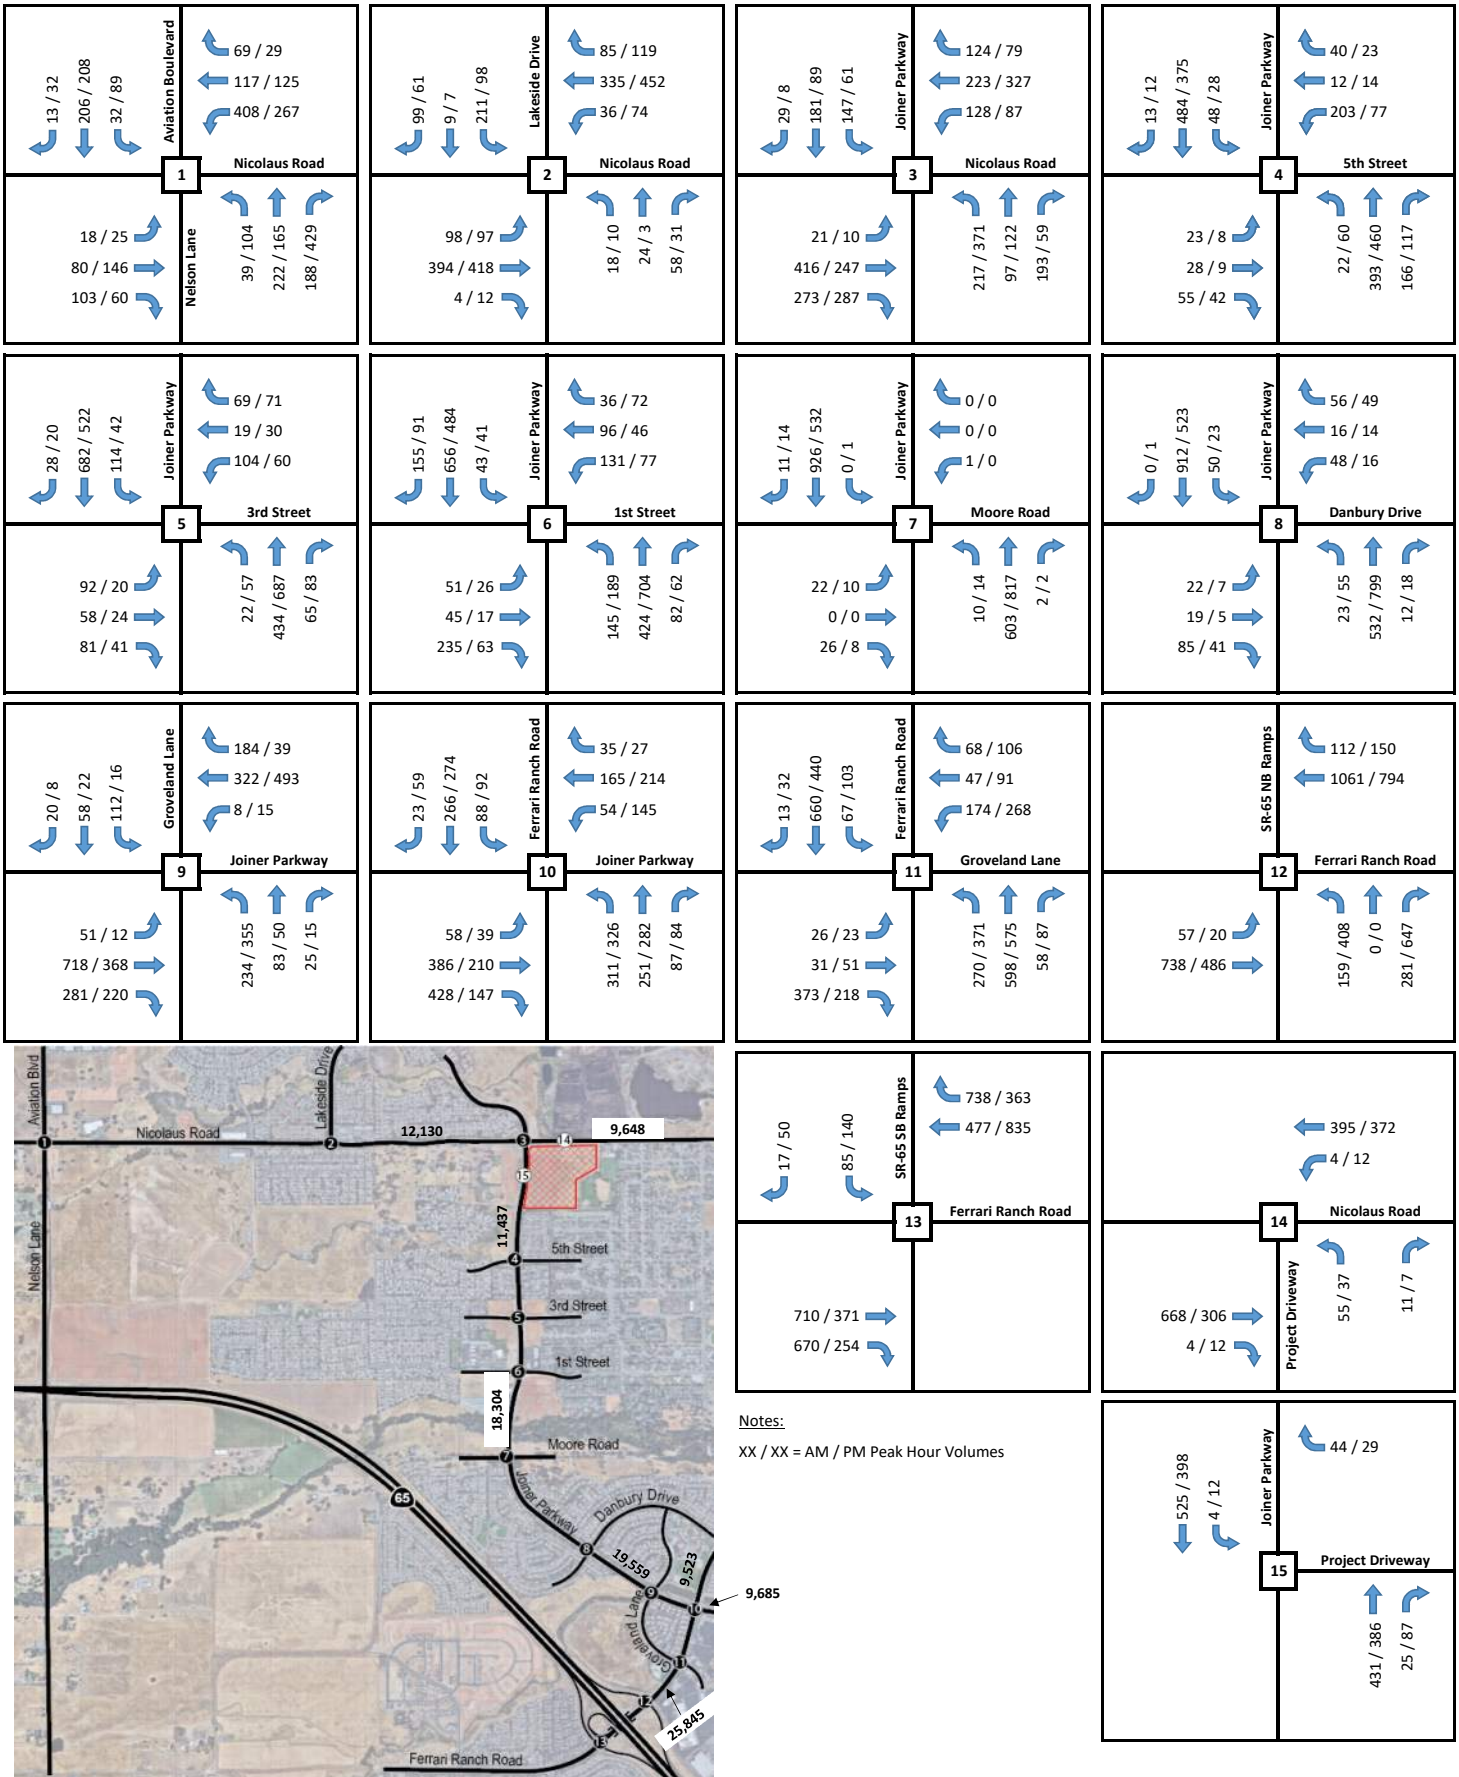

TABLE 12. EXISTING PLUS APPROVED/PENDING PROJECTS PLUS PROJECT AM/PM PEAK HOUR INTERSECTION LOS

Study Intersection		Existing Plus Approved/ Pending Projects Conditions				Existing Plus Approved/ Pending Projects Plus Project Conditions				Change in Delay (sec.)		Significant Impact?	
		AM		PM		AM		PM		AM	PM	AM	PM
		Delay ¹	LOS	Delay ¹	LOS	Delay ¹	LOS	Delay ¹	LOS				
1	Nicolaus Road / Nelson Lane	26.8	D	16.0	C	37.4	E	15.1	C	10.6	-0.9	No	No
2	Nicolaus Road / Lakeside Drive	9.4	A	8.3	A	9.5	A	8.2	A	0.1	-0.1	No	No

4	Joiner Parkway / 5th Street	20.9	C	12.7	B	21.6	C	12.8	B	0.7	0.1	No	No
5	Joiner Parkway / 3rd Street	18.0	B	13.9	B	18.5	B	13.9	B	0.5	0.0	No	No
6	Joiner Parkway / 1st Street	28.6	C	16.4	B	30.1	C	16.6	B	1.5	0.2	No	No
7	Joiner Parkway / Moore Road	36.3	E	12.8	B	48.6	E	14.1	B	12.3	1.3	No	No
8	Joiner Parkway / Danbury Drive	17.8	B	14.4	B	18.2	B	14.7	B	0.4	0.3	No	No
9	Joiner Parkway / Groveland Lane	24.1	C	18.0	B	24.9	C	18.8	B	0.8	0.8	No	No
10	Joiner Parkway / Ferrari Ranch Rd	23.3	C	23.3	C	23.7	C	23.7	C	0.4	0.4	No	No
11	Ferrari Ranch Rd / Groveland Lane	46.4	D	61.8	E	46.9	D	63.0	E	0.5	1.2	No	No
12	Ferrari Ranch Rd / SR-65 NB Ramps	48.5	D	29.8	C	53.8	D	29.9	C	5.3	0.1	No	No
13	Ferrari Ranch Rd / SR-65 SB Ramps	5.4	A	6.1	A	5.5	A	6.3	A	0.1	0.2	No	No
14	Nicolaus Road / Site Driveway #1	Does Not Exist				1.6	A	1.1	A	1.6	1.1	No	No
15	Joiner Parkway / Site Driveway #2	Does Not Exist				0.5	A	0.4	A	0.5	0.4	No	No

Note: Deficient intersection operation indicated in **bold**.

¹Seconds of delay per vehicle.

LOS = level of service

As shown in **Table 12**, all study intersections are forecast to operate at an acceptable level of service (LOS C or better) with the addition of project traffic during the peak hours except for the following intersections:

- Int. #1 - Nicolaus Road / Nelson Lane LOS E in the AM Peak Hour
- Int. # 7 – Joiner Parkway / Moore Road LOS E in the AM Peak Hour
- Int. # 11 – Ferrari Ranch Road / Groveland Lane LOS D in AM & LOS E in PM Peak Hour

At the all-way stop controlled intersection of Nicolaus Road / Nelson Lane, intersection operations are deficient in the AM peak hour without and with project traffic and the change in delay exceeds the 2.5 second significance threshold. However, project-related traffic does not result in a significant impact at this location since a signal warrant is not met. Refer to Section 1.2.1 of this report and **Appendix J** for further detail on signal warrant analysis. Therefore, project traffic at this intersection is considered less-than-significant and no mitigation is required.

At the all-way stop controlled intersection of Joiner Parkway / Moore Road, intersection operations are deficient in the AM peak hour without and with project traffic and the change in delay exceeds the 2.5 second significance threshold. However, project-related traffic does not result in a significant impact at this location since a signal warrant is not met. Refer to Section 1.2.1 of this report and **Appendix J** for further detail on signal warrant analysis. Therefore, project traffic at this intersection is considered less-than-significant and no mitigation is required.

At the signalized intersection of Ferrari Ranch Road / Groveland Lane, intersection operations are deficient in both the AM and PM peak hour. However, the change in delay of 0.5 and 1.2 seconds in the AM and PM peaks respectively are less than the 4.0 second threshold of significance. Therefore, project traffic at this intersection is considered less-than-significant and no mitigation is required.

6.3 EXISTING PLUS APPROVED/PENDING PROJECTS PLUS PROJECT ROADWAY SEGMENT LOS

Table 13 summarizes Existing Plus Approved/Pending Projects Plus Project roadway segment operations.

TABLE 13. EXISTING PLUS APPROVED/PENDING PROJECTS PLUS PROJECT ROADWAY SEGMENT LOS

Segment	Location	Total LOS E Capacity	Existing Plus Approved/ Pending Projects			Existing Plus Approved/ Pending Projects Plus Project			Δ V/C	Project ADT	Significant Impact?
			ADT	V/C	LOS	ADT	V/C	LOS			
Nicolaus Road	Lakeside Drive to Joiner Parkway	40,000	11,836	0.30	A	12,130	0.30	A	0.007	294	No

	SR-65 NB Ramps to Groveland Ln	60,000	25,062	0.42	A	25,845	0.43	A	0.013	783	No

Note: Deficient roadway segment operations shown in **bold**.

LOS= Level of Service; V/C= Volume to Capacity Ratio; Δ = Difference

As shown in **Table 13**, all study roadway segments are forecast to operate at an acceptable level of service (LOS C or better) for Existing Plus Approved/Pending Projects Plus Project conditions. Therefore, there are no significant impacts as a result of the project. Thus, mitigation is not required.

7 CUMULATIVE YEAR 2040 WITHOUT PROJECT CONDITIONS

7.1 CUMULATIVE YEAR 2040 WITHOUT PROJECT TRAFFIC VOLUMES

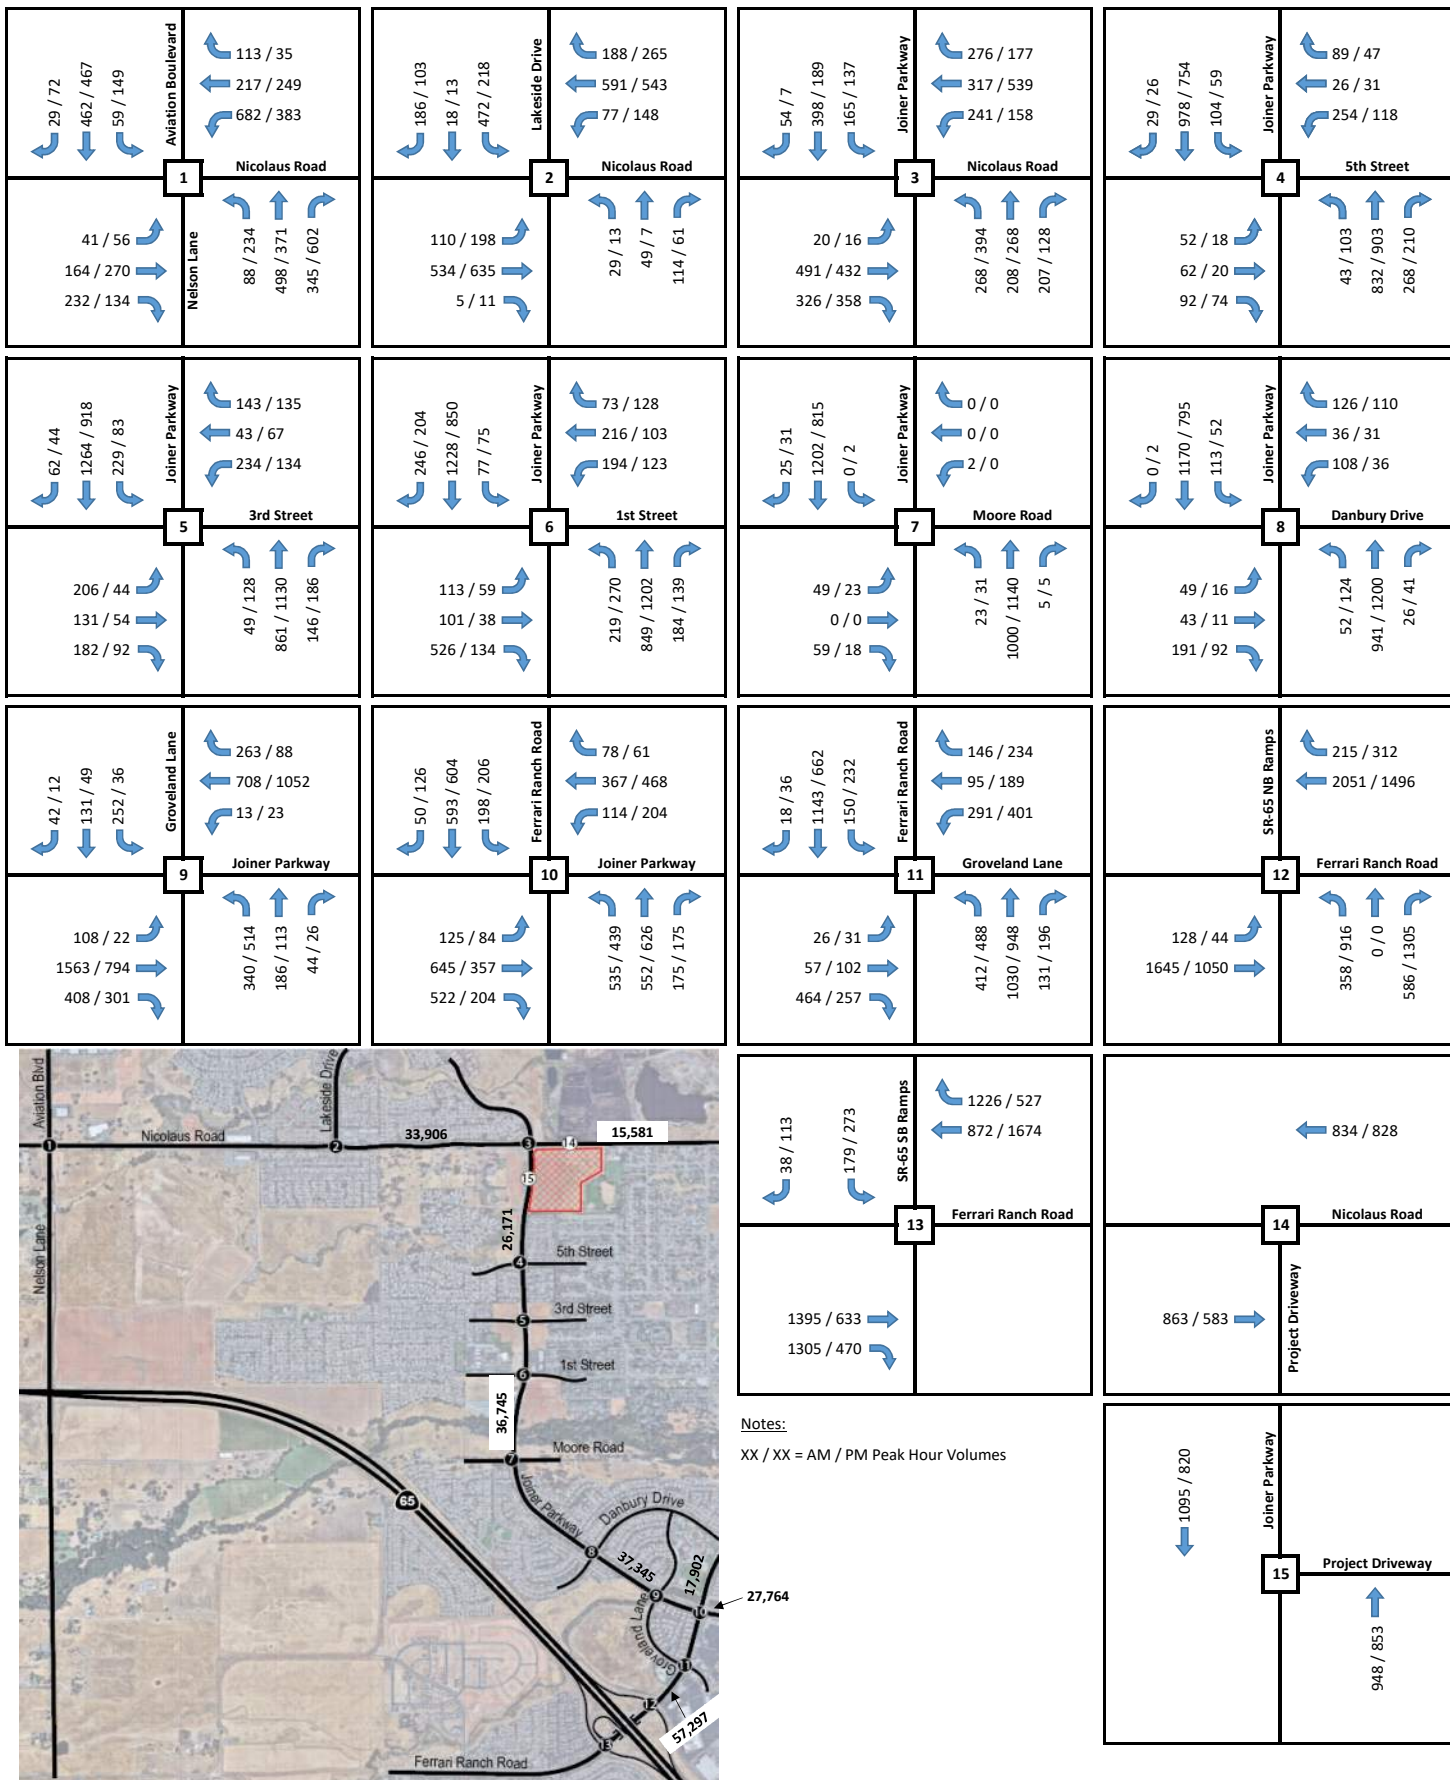

Through coordination with City staff, the Year 2030 Sacramento Area Council of Governments (SACOG) travel model was provided by DKS Associates in February 2020. For the purpose of this analysis, the 2030 SACOG travel model was used to develop the Year 2040 peak hour and daily traffic volumes within the project study area. Traffic growth within the project's study area is attributed to future planned development within the area and is forecast to have a growth rate of 9.68% per year for nine years (project buildout in year 2021 to year 2030). To determine traffic growth in the area from the model year 2030 to year 2040, the average population growth rate in the City of Lincoln was used since forecast traffic growth to year 2040 is not provided in the model. The average population growth rate over the last eight years was calculated to be 1.35% per year from 2011 to 2019 (refer to <http://worldpopulationreview.com/us-cities/lincoln-ca-population/>). To be conservative, a 2% per year growth rate for a 10-year period was applied above the model Year 2030 traffic volumes which included project traffic to obtain the Cumulative Year 2040 Plus Project traffic volumes. Future volumes were reviewed to determine the reasonableness of growth within the study area.

Year 2040 was selected as the cumulative year to be consistent with the City's General Plan. Daily traffic volumes for the Cumulative Year 2040 Without Project condition were derived from the 2030 SACOG travel model. First, the daily traffic volumes from the Year 2030 SACOG travel model were extracted directly from the model and then a 2% growth rate per year was applied to the 2030 volumes for 10 years (2030 to 2040) to obtain the Cumulative Year 2040 Plus Project volumes similar to how the peak hour volumes were calculated. Daily traffic volumes generated by Joiner Ranch East project were subtracted from the Cumulative Year 2040 Plus Project daily volumes to obtain the Cumulative Year 2040 Without Project daily traffic volumes.

It should be noted that the SACOG model assumes three single family dwelling units, 181,100 square feet of retail and 67,500 square feet of office within the traffic analysis zone where the Joiner Ranch East project is located. This translates to 7,500 vehicles per day using ITE trip generation rates. The Joiner Ranch East project with 199 single family dwelling units is expected to generate 1,958 vehicles per day (5,542 less daily trips than what's assumed in the SACOG model). To provide a conservative analysis, only traffic volumes associated with the proposed Joiner Ranch East project were extracted to determine the no project condition. **Exhibit 13** shows the Cumulative Year 2040 Without Project AM and PM peak hour volumes at study intersections.

7.2 CUMULATIVE YEAR 2040 ROADWAY NETWORK

The Cumulative Year 2040 Without Project condition assumed planned roadway improvements such as the signalization of Nicolaus Road / Nelson Lane and signalization of Nicolaus Road / Lakeside Drive. These improvements are planned as part of the Independence at Lincoln development and SUD-B Northeast Quadrant Specific Plan under Cumulative conditions. Therefore, this analysis assumes these improvements will be constructed by others prior to year 2040.

7.3 CUMULATIVE YEAR 2040 WITHOUT PROJECT PEAK HOUR STUDY INTERSECTION LOS

Table 14 summarizes Cumulative Year 2040 Without Project AM and PM peak hour level of service for all study intersections. Detailed analysis sheets are contained in **Appendix H**.

TABLE 14. CUMULATIVE YEAR 2040 WITHOUT PROJECT AM/PM PEAK HOUR INTERSECTION LOS

Study Intersection		Traffic Control	Cumulative Year 2040 Without Project			
			AM		PM	
			Delay ¹	LOS	Delay ¹	LOS
1	Nicolaus Road / Nelson Lane	Signal	43.8	D	65.1	E
2	Nicolaus Road / Lakeside Drive	Signal	31.0	C	22.8	C

15	Joiner Parkway / Site Driveway #2	OWSC	Does Not Exist Without Project			

Note: Deficient intersection operation indicated in **bold**.

¹Seconds of delay per vehicle.

LOS = level of service; AWSC = All-Way Stop Control; OWSC = One-Way Stop Control

As shown in **Table 14**, all study intersections are forecast to operate at an acceptable level of service (LOS C or better) during the peak hours except for:

- Int. #1 – Nicolaus Road / Nelson Lane LOS D in the AM & LOS E in the PM Peak Hour
- Int. #3 – Joiner Parkway / Nicolaus Road LOS E in the AM Peak Hour
- Int. #6 – Joiner Parkway / 1st Street LOS E in the AM Peak Hour
- Int. #7 – Joiner Parkway / Moore Road LOS F in the AM & LOS E in the PM Peak Hour
- Int. #9 – Joiner Parkway / Groveland Lane LOS F in the AM & LOS D in the PM Peak Hour
- Int. #11 – Ferrari Ranch Rd / Groveland Lane LOS D in the AM & PM Peak Hour

7.4 CUMULATIVE YEAR 2040 WITHOUT PROJECT ROADWAY SEGMENT LOS

Table 15 summarizes the Cumulative Year 2040 Without Project conditions average daily traffic levels of service for all study roadway segments.

TABLE 15. CUMULATIVE YEAR 2040 WITHOUT PROJECT ROADWAY SEGMENT LOS

Segment	Location	Classification	LOS E Capacity	# of Lanes	Total LOS E Capacity	Cumulative Year 2040		
						ADT	V/C	LOS
Nicolaus Road	Lakeside Drive to Joiner Parkway	Arterial - High Access Control	10,000	4	40,000	33,906	0.85	D
	Joiner Parkway to O Street	Arterial - Moderate Access Control	9,000	2	18,000	15,581	0.87	D
Joiner Parkway	Nicolaus Road to 5th Street	Arterial - High Access Control	10,000	4	40,000	26,171	0.65	B
	1st Street to Moore Road	Arterial - High Access Control	10,000	4	40,000	36,745	0.92	E
	Danbury Drive to Groveland Lane	Arterial - High Access Control	10,000	4	40,000	37,345	0.93	E
	Ferrari Ranch Rd to Lincoln Blvd	Arterial - High Access Control	10,000	4	40,000	27,764	0.69	B
Ferrari Ranch Road	Joiner Parkway to Danbury Drive	Arterial - High Access Control	10,000	4	40,000	17,902	0.45	A
	SR-65 NB Ramps to Groveland Ln	Arterial - High Access Control	10,000	6	60,000	57,297	0.95	E

Note: Deficient roadway segment operations shown in **bold**.

LOS= Level of Service; V/C= Volume to Capacity Ratio

As shown in **Table 15**, three of the study roadway segments are forecast to operate at an acceptable level of service (LOS C or better) for Cumulative Year 2040 Without Project conditions. The remaining five roadway segments in the study area are forecast to operate at a deficient level of service (D, E or F).

8 CUMULATIVE YEAR 2040 PLUS PROJECT CONDITION

8.1 CUMULATIVE YEAR 2040 PLUS PROJECT TRAFFIC VOLUMES

Cumulative Year 2040 Plus Project traffic volumes are based on traffic volumes from the Year 2030 SACOG travel model and population growth to estimate Year 2040 traffic volumes as discussed in Section 7.1 of this report. **Exhibit 14** shows the Cumulative Year 2040 Plus Project daily and peak hour volumes.

8.2 CUMULATIVE YEAR 2040 PLUS PROJECT PEAK HOUR STUDY INTERSECTION LOS

Table 16 summarizes Cumulative Year 2040 Plus Project AM and PM peak hour level of service for all study intersections. Detailed analysis sheets are contained in **Appendix I**.

TABLE 16. CUMULATIVE YEAR 2040 PLUS PROJECT AM/PM PEAK HOUR INTERSECTION LOS

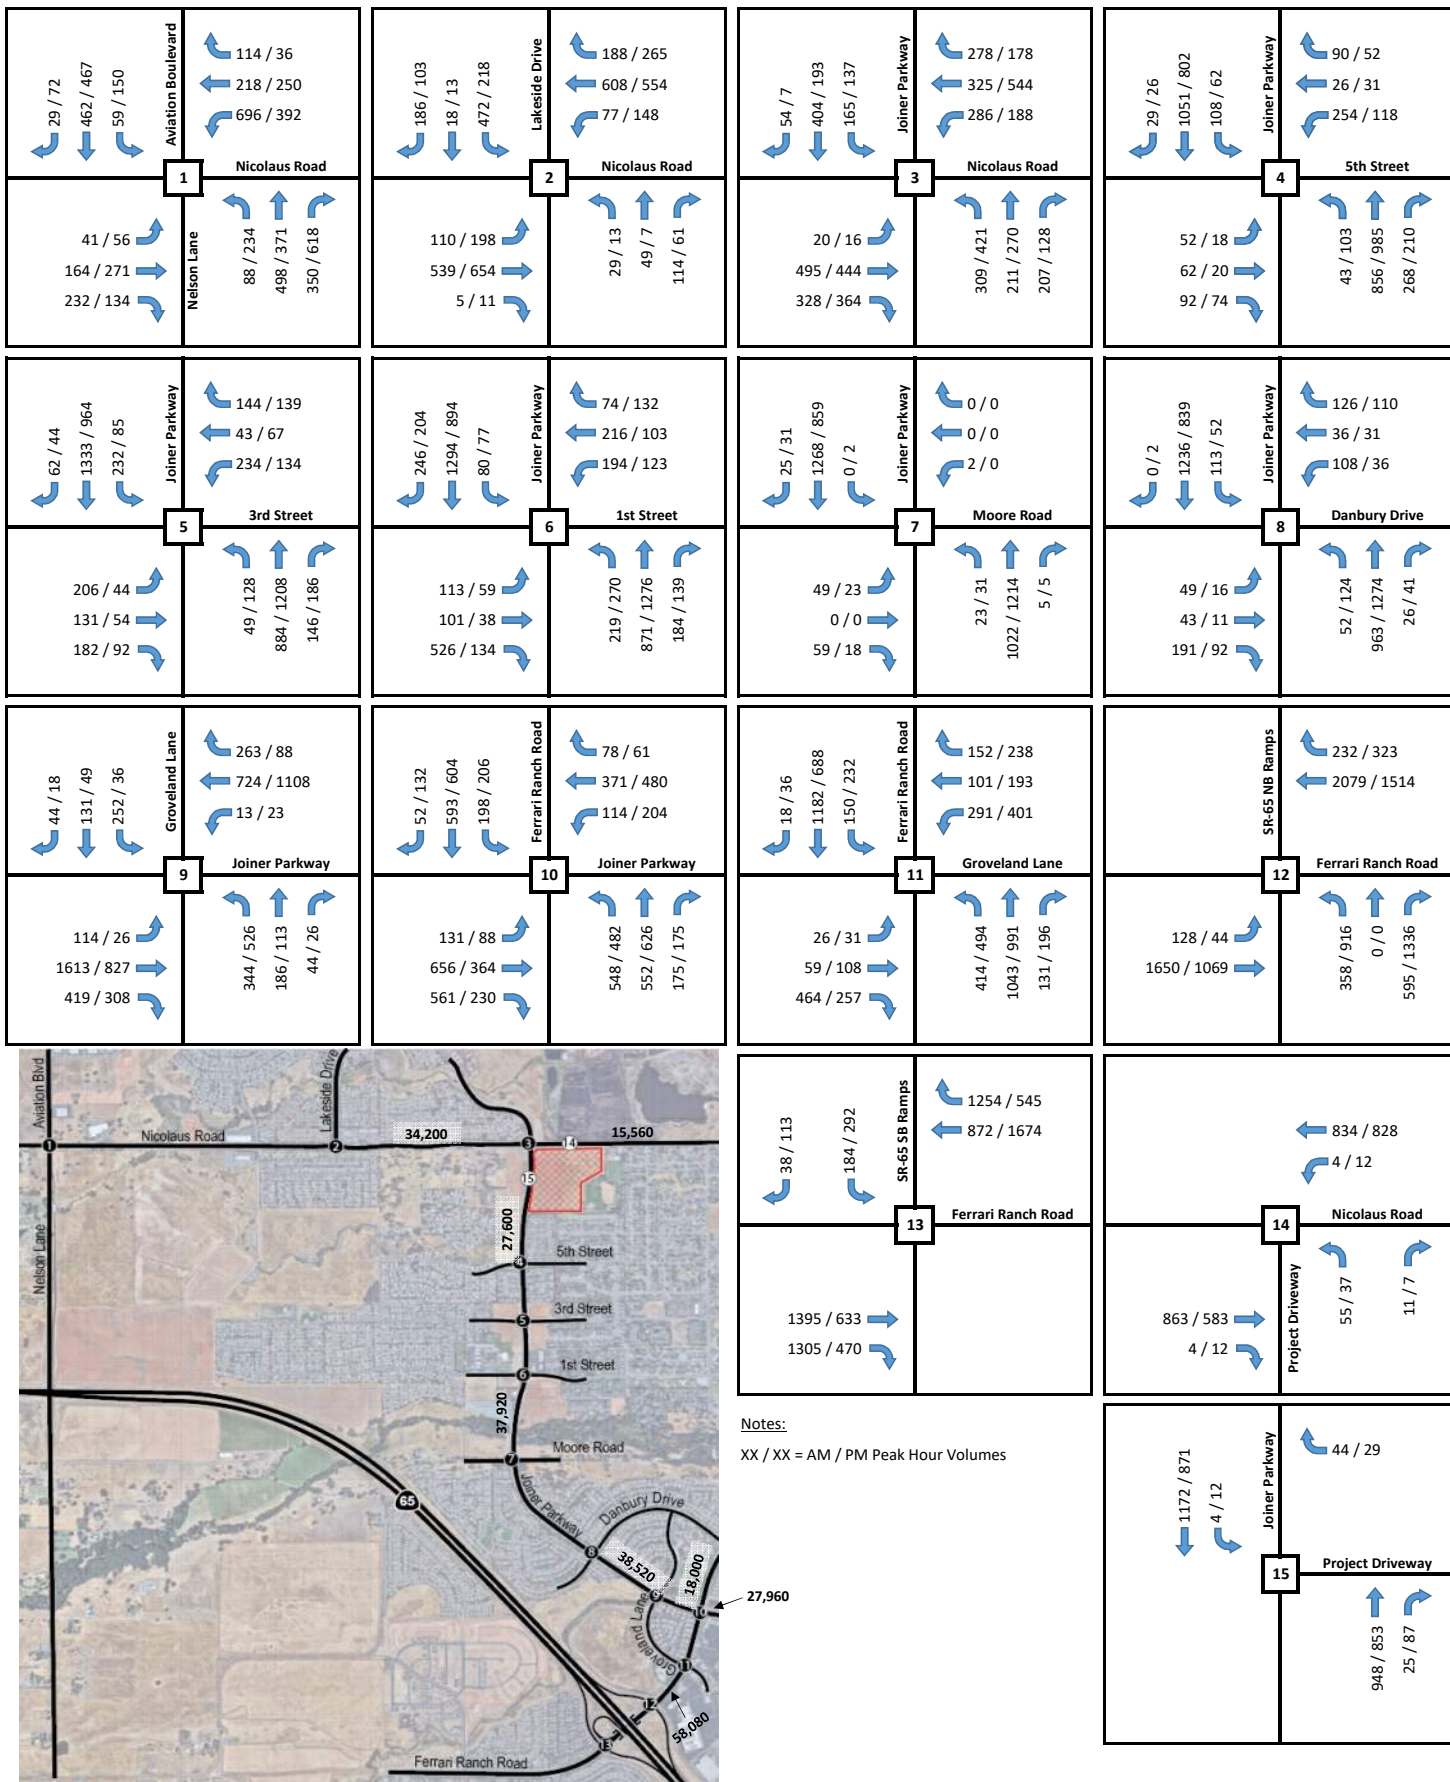

Study Intersection	Cumulative Year 2040 Conditions				Cumulative Year 2040 Plus Project Conditions				Change in Delay (sec.)		Significant Impact?	
	AM		PM		AM		PM		AM	PM	AM	PM

14 Nicolaus Road / Site Driveway #1	Does Not Exist				24.9	C	20.0	C	24.9	20.0	No	No
15 Joiner Parkway / Site Driveway #2	Does Not Exist				12.6	B	11.8	B	12.6	11.8	No	No

Note: Deficient intersection operation indicated in **bold**.

¹Seconds of delay per vehicle.

LOS = level of service

As shown in **Table 16**, all study intersections are forecast to operate at an acceptable level of service (LOS C or better) during the peak hours expect for six study intersections. The all-way stop controlled intersection of Joiner Parkway / Moore Road is forecast to be significantly impacted by the project. The change in delay is greater than 4.0 seconds and a signal is warranted in the AM peak hour. Refer to **Appendix J** for the signal warrant analysis. Recommended mitigation for the project is to contribute a fair share towards a traffic signal at the Joiner Parkway/Moore Road intersection.

8.3 CUMULATIVE YEAR 2040 PLUS PROJECT ROADWAY SEGMENT LOS

Table 17 summarizes Cumulative Year 2040 Plus Project conditions roadway segment operations.

TABLE 17. CUMULATIVE YEAR 2040 PLUS PROJECT ROADWAY SEGMENT LOS

Segment	Location	Total LOS E Capacity	Cumulative Year 2040			Cumulative Year 2040 Plus Project			Δ V/C	Project ADT	Significant Impact?
			ADT	V/C	LOS	ADT	V/C	LOS			
Nicolaus Road	Lakeside Drive to Joiner Parkway	40,000	33,906	0.85	D	34,200	0.86	D	0.007	294	No
	Joiner Parkway to O Street	18,000	15,581	0.87	D	15,560	0.92	E	0.054	979	Yes
Joiner Parkway	Nicolaus Road to 5th Street	40,000	26,171	0.65	B	27,600	0.69	B	0.036	1,429	No
	1st Street to Moore Road	40,000	36,745	0.92	E	37,920	0.95	E	0.029	1,175	No
	Danbury Drive to Groveland Lane	40,000	37,345	0.93	E	38,520	0.96	E	0.029	1,175	No
	Ferrari Ranch Rd to Lincoln Blvd	40,000	27,764	0.69	B	27,960	0.70	B	0.005	196	No
Ferrari Ranch Road	Joiner Parkway to Danbury Drive	40,000	17,902	0.45	A	18,000	0.45	A	0.002	98	No
	SR-65 NB Ramps to Groveland Ln	60,000	57,297	0.95	E	58,080	0.97	E	0.013	783	No

Note: Deficient roadway segment operations shown in **bold**.

ADT= Average Daily Traffic; LOS= Level of Service; V/C= Volume to Capacity Ratio

As shown in **Table 17**, three of the study roadway segments are forecast to operate at an acceptable level of service (LOS C or better) for Cumulative Year 2040 Plus Project conditions. The remaining five roadway segments in the study area are forecast to operate at a deficient level of service (D, E or F).

According to the significance criteria, Nicolaus Road from Joiner Parkway to O Street is significantly impacted by the project. The change in v/c ratio for this segment exceeds the 0.05 significance threshold and the project ADT is more than 100 vehicles per day. The impacted segment on Nicolaus Road includes the project frontage, which is approximately 1,150 feet. The project plans to widen Nicolaus Road from the existing 40-foot pavement width to match the 70 feet curb-to-curb width immediately east of the project site (30-foot widening). The new roadway would include one travel lane in each direction and a center two-way left-turn lane which will increase roadway capacity and access to/from the project site. With three travel lanes on Nicolaus Road from Joiner Parkway to O Street, the total LOS E capacity would increase from 18,000 to 27,000 vehicles per day (9,000 x 3 lanes). With a Cumulative Year 2040 Plus Project daily volume of 15,560, the LOS on this segment would be LOS B ($v/c = 15,560 / 27,000 = 0.58$). Therefore, these improvements are expected to reduce the level of impact to less than significant.

9 PROJECT ACCESS, CIRCULATION & VMT

The project proposes to provide two points of vehicular access via Joiner Parkway and Nicolaus Road. At the Joiner Parkway stop-controlled access, the project will provide a left-turn in, right-turn in, and right-turn out. Access to the project via Nicolaus Road is proposed to be a full access stop-controlled driveway. The traffic analysis includes both access points which are anticipated to operate at acceptable levels of service (LOS C or better). In addition to the level of service analysis, the sight distance and the determination of a left-turn lane is evaluated at the project access point on Nicolaus Road. The southbound left-turn pocket on Joiner Parkway providing access into the project has already been constructed within the existing center raised median. However, the left-turn lane needs to be re-striped since the turn lane is currently striped to prohibit motorists from using the turn lane at this time. The raised median along Joiner Parkway at the project access prohibits project traffic from a westbound left out of the driveway onto Joiner Parkway to travel southbound. Therefore, some of the project traffic is expected to turn right onto Joiner Parkway and then make a U-turn at the signalized intersection of Joiner Parkway/Nicolaus Road. These U-turns have been included in the level of service analysis and are not expected to negatively impact the operations of the intersection. A queuing analysis is included in this section showing the northbound left-turn queues based on the different study scenarios with project traffic.

9.1 SIGHT DISTANCE

For the proposed project access on Nicolaus Road, minimum corner sight distance shall be in conformance with the *American Association of State Highway and Transportation Officials (AASHTO) 6th Edition Standards*. The posted speed limit on Nicolaus Road is 35 MPH.

These guidelines state that specific areas between a driver's eye and an approaching vehicle's path of travel (known as clear sight triangles) must be clear of obstructions that may block a driver's view. A height of 3.5 feet is used for both the driver's height and the object height. The sight triangles are based on the roadway design speed and the time gap for minor road vehicles to enter the major road and vice versa. For the purposes of these calculations, the design speed is assumed to be the same as the posted speed limit. The posted speed on Nicolaus Road is 35 MPH. The distance from the edge of the major-road travel way to the vertex of the clear sight distance must be a minimum of 10 feet plus the width of the shoulder of the major road for a total minimum of 15 feet. For the purposes of this analysis, 15 feet from the travel way to the location of the driver's eye is used. These sight triangles must be kept free of visual obstructions (i.e. monuments, landscaping, berms, etc.). In addition, any tree canopy within the sight triangle should also be maintained at a level no less than 10 feet above the roadway at all times.

Based on AASHTO standards, the required stopping sight distance for vehicles stopping, turning right or left from the project driveway onto Nicolaus Road is 250 feet. The available sight distance from the project driveway to the east is approximately 500 feet where the signal at Joiner Parkway is located. Looking west on Nicolaus Road, the available sight distance exceeds 500 feet. Therefore, the available sight distance is greater than the minimum sight distance and drivers exiting onto Nicolaus Road will have adequate visibility at the project driveway.

9.2 LEFT TURN LANE EVALUATION

A dedicated left-turn lane was evaluated in the westbound approach on Nicolaus Road for vehicles turning left into the project. The AASHTO standards provide guidelines for the installation of left-turn lanes in Chapter 9.7.3 (Design Treatments for Left-Turn Maneuvers). Table 9-23 in the AASHTO standards is presented in **Table 18** which presents the need for a left-turn lane based on the volume of traffic on the mainline road and relative percentage of traffic that turns left.

The need for the left turn lane is based on the AM peak hour where the volume of inbound traffic is highest. Under Existing Plus Approved/Pending Projects Plus Project conditions, four westbound left turns enter the project site on Nicolaus Road. The number of northbound left and right turning vehicles during the AM peak hour exiting the site is forecast to be 66 vehicles (11 turning right and 55 turning left). Therefore, 6% (4/66) of the vehicles turn left into the project site. There are 668 eastbound through vehicles in the AM peak hour opposing the advancing volume. As shown in Table 18, for the volume of eastbound traffic (668 vehicles/hour), the advancing volume would need to be in the range of 330 to 410 vehicles/hour at 40 MPH design speed to justify a separate westbound left-turn lane for traffic entering the project site. The anticipated volume (66 vehicles/hour) falls well outside that range. Therefore, a dedicated left-turn lane in the westbound approach on Nicolaus Road at the project access would not be needed using AASHTO's criteria. It may also be noted the project may be required to construct a center two-way-left-turn lane along the project frontage which would provide a separate left-turn lane in the westbound approach into the project from Nicolaus Road.

TABLE 18. LEFT TURN LANE ASSESSMENT

Opposing Volume (veh/hr)	Advancing Volume (veh/hr)			
	5% Left Turns	10% Left Turns	20% Left Turns	30% Left Turns
40-mph Operating Speed				
800	330	240	180	160
668	66 (6%)			
600	410	305	225	200
400	510	380	275	245
200	640	470	350	305
100	720	515	390	340

Source: A Policy on Geometric Design of Highway and Streets, AASHTO, Chapter 9.
Existing Plus Approved/Pending Projects Plus Project Volumes shown in red.

9.3 QUEUING EVALUATION

A queuing analysis was conducted at the intersection of Joiner Parkway / Nicolaus Road where the addition of project-related traffic at specific turn movements could potentially impact intersection operations. The queuing analysis focused on the northbound and westbound left-turn lanes where project traffic would be highest at Joiner Parkway / Nicolaus Road. Synchro was used to report the 95th percentile queue length in feet which is summarized in **Table 19**. The 95th percentile queue length value indicates that during the peak hour, a queue of this length or less would occur on 95 percent of the signal cycles.

TABLE 19 – INTERSECTION QUEUING ANALYSIS

Movement	No. Lanes	Storage Length Per Lane (ft)	Peak Hour Volume		95th % Queue (ft) ¹		Adverse Effect? ²
			AM	PM	AM	PM	
EXISTING CONDITIONS							
Joiner Parkway / Nicolaus Road							
WBL	1	130	82	54	102	53	No
NBL	1.5	180	141	205	90	86	No
EXISTING PLUS PROJECT CONDITIONS							
Joiner Parkway / Nicolaus Road							
WBL	1	130	127	84	195	76	Yes
NBL	1.5	180	182	232	104	94	No
EXISTING PLUS APPROVED/PENDING PROJECTS PLUS PROJECT CONDITIONS							
Joiner Parkway / Nicolaus Road							
WBL	1	130	128	87	231	91	Yes
NBL	1.5	180	217	371	135	151	No

¹ Synchro reports 95th percentile queue in feet.

² For locations that exceed the available storage, does the project increase the queue by more than 25 feet (one vehicle-length)?

As shown in Table 19, the westbound left-turn 95th percentile queue is reported to be 231 feet with a current storage length of 130 feet. It is recommended the project extend the left-turn storage bay length from 130 feet to 230 feet (additional 100 feet) to accommodate additional project-related vehicles turning left in the westbound approach at Joiner Parkway / Nicolaus Road. **Appendix J** includes the queuing worksheets.

9.4 WEAVING ACROSS JOINER PARKWAY

Motorists weaving across one lane of northbound traffic on Joiner Parkway to access the number one left-turn lane to make a U-turn at the signalized intersection of Joiner Parkway / Nicolaus Road was considered. From the project access on Joiner Parkway to the beginning of the dual left-turn lane is approximately 300 feet. The posted speed limit on Joiner Parkway is 40 MPH. According to Figure 2-24 (Acceleration of Passenger Cars, Level Conditions) in the AASHTO standards, a motorist exiting the project site onto Joiner Parkway can accelerate to a speed of 35 MPH within a distance of 300 feet to enter the number one left-turn lane and then slow to a stop if there is no queue in the left turn lanes. However, if the vehicles queued in both of the left-turn lanes fill both storage bays, then a motorist exiting the project site to make a U-turn at the signal would most likely need to wait for the turn lanes to clear before entering onto Joiner Parkway to access the number one left-turn lane. The speed differential is 5 MPH and there would be gaps in northbound traffic based on the signal downstream at 5th Street. Therefore, the available weaving distance is considered adequate.

9.5 VEHICLE MILES TRAVELED (VMT)

In December 2018, new California Environmental Quality Act (CEQA) guidelines were approved that shift traffic analysis from delay and operations to VMT when evaluating transportation impacts under CEQA. This change in methodology is a result of Senate Bill 743 (SB743), which was signed into law in September 2013. As part of the development of the new CEQA guidelines, the Governor's Office of Planning and Research (OPR) prepared a *Technical Advisory on Evaluating Transportation Impacts in CEQA (Technical Advisory)*. The final version of the Technical Advisory is dated December 2018 and provides guidance for local jurisdictions in developing methodologies and thresholds for evaluating VMT. The *Technical Advisory* provides VMT metrics for residential, retail and employment. For residential projects such as Joiner Ranch East, the *Technical Advisory* recommends establishing the VMT threshold at 85% or less of an adopted VMT threshold. At the time this report was prepared, the City of Lincoln or Placer County have not adopted VMT thresholds or guidelines. Agencies must fully implement the new CEQA guidelines for transportation by June 2020. It is anticipated the City of Lincoln or Placer County will release their own VMT thresholds and guidelines or adopt the VMT thresholds outlined in OPR's *Technical Advisory* in advance of the June 2020 deadline. For purposes of this analysis, OPR's thresholds and guidance for determining a significant VMT impact was used.

As stated in OPR's *Technical Advisory*, the threshold for determining a VMT impact is as follows:

"If a project average is lower than either 85% of the regional average or 85% average for the City or community in which the project is located, the VMT impacts of the project can be presumed less than significant."

VMT per Capita maps are provided in Sacramento Area Council of Government's (SACOG) 2020 Metropolitan Transportation Plan / Sustainable Communities Strategy (MTP/SCS). The SACOG 2020 MTP/SCS illustrates the VMT generation across the region based on land use patterns in 2016 and 2040. Throughout the region, areas are color coded based on the VMT per capita relative to the regional average VMT. For example, blue and green areas represent the areas that tend to generate low daily VMT per person while orange and red areas show places that tend to rely more on driving for daily activities i.e. higher VMT per person. According to the VMT maps, the project site is located within an area that is currently and in the future expected to be 100% to 115% above the regional average VMT per capita. Refer to **Appendix J** for the VMT maps. This map indicates the project site is not located within a VMT efficient area. Since there is no high quality transit near the site, it is also not in a transit priority area. Therefore, it is reasonable to assume the proposed residential project in the City of Lincoln falls above the 85% threshold as recommended by OPR. Thus, the project will most likely have a significant VMT impact that will require mitigation.

For the project to reduce VMT-related impacts, recommended mitigation would be for the project to implement Transportation Demand Management (TDM) strategies. The California Air Pollution Control Officers Association (CAPCOA) report may be used to determine a wide range of TDM measures that could offset the project's VMT impacts. The following TDM measures have been identified to offset potential VMT impacts related to the proposed project:

- Provide Class II bike lanes along the project frontage to encourage an alternative travel mode.

- Provide pedestrian network improvements such as sidewalks and crosswalks within the project site and along the project frontage connecting to existing pedestrian facilities to encourage people to walk instead of drive.
- Provide traffic calming measures within the project site to encourage people to walk or bike instead of using a vehicle. Traffic calming measures may include marked crosswalks, curb extensions, speed tables, roundabouts or mini-circles, on-street parking, planter strips with street trees, chicanes/chokers, etc.

10 FINDINGS AND RECOMMENDATIONS

The proposed Joiner Ranch project is forecast to generate approximately 1,958 new daily trips which includes approximately 146 AM (36 inbound and 110 outbound) peak hour trips and 197 PM (124 inbound and 73 outbound) peak hour trips. Below is a summary of the analysis results and recommended mitigation measures.

Level of Service Analysis Results

Existing Conditions:

The results of the Existing conditions analysis show that all study intersections currently operate at acceptable levels of service (LOS C or better) except for the following locations:

- Joiner Parkway / Moore Road (LOS D in the AM Peak Hour)
- Ferrari Ranch Road / Groveland Lane (LOS D in the AM & PM Peak Hours)

The roadway segment analysis shows that all study segments currently operate at acceptable levels of service (LOS C or better).

Existing Plus Project Conditions:

With the addition of project related traffic, all study intersections continue to operate at acceptable levels of service for the Existing Plus Project conditions with the exception of the following locations:

- Joiner Parkway / Moore Road (LOS E in the AM Peak Hour)
- Ferrari Ranch Road / Groveland Lane (LOS D in the AM & PM Peak Hours)

Of the locations operating deficiently, no direct significant impacts are expected to occur according to the significance criteria for study intersections. Therefore, no mitigation is required.

The roadway segment analysis shows that all study roadway segments operate at acceptable levels of service (LOS C or better) under Existing Plus Project Conditions. Therefore, no significant impacts are identified and no mitigation is required.

Existing Plus Approved/Pending Projects Without Project Conditions:

The results of the Existing Plus Approved/Pending Projects Without Project analysis show that all study intersections operate at acceptable levels of service (LOS C or better) except for the following locations:

- Nicolaus Road / Nelson Lane (LOS D in the AM Peak Hour)
- Joiner Parkway / Moore Road (LOS E in the AM Peak Hour)
- Ferrari Ranch Road / Groveland Lane (LOS D in the AM Peak Hour & LOS E in the PM Peak Hour)

The roadway segment analysis shows that all study segments operate at acceptable levels of service (LOS C or better) under Existing Plus Approved/Pending Projects Without Project conditions.

Existing Plus Approved/Pending Projects Plus Project Conditions:

With the addition of project related traffic, all study intersections continue to operate at acceptable levels of service (LOS C or better) for the Existing Plus Approved/Pending Projects Plus Project conditions except for the following locations:

- Nicolaus Road / Nelson Lane (LOS E in the AM Peak Hour)
- Joiner Parkway / Moore Road (LOS E in the AM Peak Hour)
- Ferrari Ranch Road / Groveland Lane (LOS D in the AM Peak Hour & LOS E in the PM Peak Hour)

Of the locations operating deficiently, no significant impacts are expected to occur according to the significance criteria for study intersections. Therefore, no mitigation is required.

The roadway segment analysis shows that all study roadway segments operate at acceptable levels of service (LOS C or better) under Existing Plus Approved/Pending Projects Plus Project Conditions. Therefore, no significant impacts are identified and no mitigation is required.

Cumulative Year 2040 Without Project Conditions:

The results of the Cumulative Year 2040 Without Project analysis show that all study intersections are forecast to operate at acceptable levels of service (LOS C or better) except for the following locations:

- Nicolaus Road / Nelson Lane (LOS D in the AM Peak Hour & LOS E in the PM Peak Hour)
- Joiner Parkway / Nicolaus Road (LOS E in the AM Peak Hour)
- Joiner Parkway / 1st Street (LOS E in the AM Peak Hour)
- Joiner Parkway / Moore Road (LOS F in the AM Peak Hour & LOS E in the PM Peak Hour)
- Joiner Parkway / Groveland Lane (LOS F in the AM Peak Hour & LOS D in the PM Peak Hour)
- Ferrari Ranch Road / Groveland Lane (LOS D in the AM and PM Peak Hours)

The roadway segment analysis shows that six out of eight study segments currently operate at deficient levels of service (LOS D or worse) under Cumulative Year 2040 Without Project conditions which include the following locations:

- Nicolaus Road from Lakeside Drive to Joiner Parkway (LOS D)
- Nicolaus Road from Joiner Parkway to O Street (LOS D)
- Joiner Parkway from 1st Street to Moore Road (LOS E)
- Joiner Parkway from Danbury Drive to Groveland Lane (LOS E)
- Ferrari Ranch Road from Joiner Parkway to Danbury Drive (LOS F)
- Ferrari Ranch Road from SR-65 NB Ramps to Groveland Lane (LOS E)

Cumulative Year 2040 Plus Project Conditions:

With the addition of project related traffic, all study intersections continue to operate at acceptable levels of service (LOS C or better) for the Cumulative Year 2040 Plus Project conditions except for the following locations:

- Nicolaus Road / Nelson Lane (LOS D in the AM Peak Hour & LOS E in the PM Peak Hour)
- Joiner Parkway / Nicolaus Road (LOS E in the AM Peak Hour)
- Joiner Parkway / 1st Street (LOS F in the AM Peak Hour)
- Joiner Parkway / Moore Road (LOS F in the AM & PM Peak Hour)
- Joiner Parkway / Groveland Lane (LOS F in the AM Peak Hour & LOS D in the PM Peak Hour)

- Ferrari Ranch Road / Groveland Lane (LOS D in the AM and PM Peak Hours)

Of the locations operating deficiently, one of the six is forecast to result in a significant impact according to the significance criteria and would require mitigation. The mitigation measure shown in Table ES-1 has been identified to achieve acceptable levels of service and fully mitigate project forecast significant impact at the study intersection for Cumulative Year 2040 Plus Project conditions.

Joiner Parkway / Moore Road Mitigation Measure: The project applicant will contribute its fair share cost toward installation of a traffic signal at the Joiner Parkway / Moore Road intersection within the existing right-of-way. The City of Lincoln's Public Facilities Element (PFE) has already identified the need for signalization at this intersection (# 71 in PFE Map). Thus, mitigation proposed is consistent with the project's qualifying for funding in the PFE. Table ES-1 shows the improved level of service at Joiner Parkway / Moore Road with the installation of a traffic signal.

The roadway segment analysis shows that six out of eight study segments currently operate at deficient levels of service (LOS D or worse) under Cumulative Year 2040 Plus Project conditions which include the following locations:

- Nicolaus Road from Lakeside Drive to Joiner Parkway (LOS D)
- Nicolaus Road from Joiner Parkway to O Street (LOS E)
- Joiner Parkway from 1st Street to Moore Road (LOS E)
- Joiner Parkway from Danbury Drive to Groveland Lane (LOS E)
- Ferrari Ranch Road from Joiner Parkway to Danbury Drive (LOS F)
- Ferrari Ranch Road from SR-65 NB Ramps to Groveland Lane (LOS E)

Of the locations operating deficiently, one of the eight study roadway segments is forecast to result in a cumulative significant impact according to the significance criteria and would require mitigation.

Nicolaus Road from Joiner Parkway to O Street Mitigation Measure: The project plans to widen Nicolaus Road on the south side along the project frontage (approximately 1,150 feet). The widening would consist of adding approximately 30 feet to the existing 40-foot pavement width to match the existing curb-to-curb width of 70 feet immediately east of the project site. This new section of roadway would include one travel lane in each direction with a center two-way left-turn lane (3 total lanes) which will increase roadway capacity from 18,000 to 27,000 vehicles per day. In addition, the center two-way left-turn lane would allow for westbound left-turn movements into the project site. As shown in Table ES-1, this mitigation would improve the level of service to an acceptable level (LOS C) and fully mitigate the project forecast significant impact at the study segment under Cumulative Year 2040 Plus Project conditions.

Vehicle Miles Traveled (VMT) Summary:

This report evaluates potential VMT impacts as it relates to the proposed project. VMT per capita maps were used to determine if the project is located within a low or high VMT per capita area compared to the average VMT per capita in the Sacramento region. According to the VMT maps, the project site is located within an area that is expected to generate 100% to 115% of the regional average VMT per capita. This map indicates the project site is not located within a VMT efficient area. As there is not high-quality transit within ¼ mile of the site, the project is also not included in a transit priority area. Based on

screening criteria established by OPR, the project would likely be subject to a CEQA VMT analysis. Since the VMT per capita maps show the project site to be in an area where VMT is currently 100% to 115% of the regional average, it is reasonable to assume the proposed residential project in the City of Lincoln falls above the 85% threshold and will most likely have a significant VMT impact that will require mitigation.

For the project to reduce VMT-related impacts, recommended mitigation would be for the project to implement Transportation Demand Management (TDM) strategies. The California Air Pollution Control Officers Association (CAPCOA) report may be used to determine a wide range of TDM measures that could offset the project's VMT impacts. The following TDM measures have been identified to offset potential VMT impacts related to the proposed project:

- Provide Class II bike lanes along the project frontage to encourage an alternative travel mode.
- Provide pedestrian network improvements such as sidewalks and crosswalks within the project site and along the project frontage connecting to existing pedestrian facilities to encourage people to walk instead of drive.
- Provide traffic calming measures within the project site to encourage people to walk or bike instead of using a vehicle. Traffic calming measures may include marked crosswalks, curb extensions, speed tables, roundabouts or mini-circles, on-street parking, planter strips with street trees, chicanes/chokers, etc.

Traffic Impact Study Scoping Agreement

Project Location: Southeast corner of Joiner Parkway/Nicolaus Road, Lincoln, CA

1. Project Description

The project is proposed at the southeast corner of Joiner Parkway and Nicolaus Road. The project proposes the development of 199 single-family dwelling units on 25.5 acres. The project site is currently vacant and undeveloped.

Exhibit 1 (attached) shows the proposed project plans. All exhibits are attached at the end of this document.

2. Trip Credit

The following table details any trip credits applied to the trip generation analysis.

Item	Condition	Credit Applied?
Existing Active Land Use	Land is currently undeveloped and vacant.	No
Internal Trip Reduction	Does not apply.	No
Pass-by Trip Reduction	Does not apply.	No

3. Trip Generation

Trip generation analysis was conducted for the weekday daily, AM Peak Hour, and PM Peak Hour time periods. The *ITE Trip Generation Manual*, 10th Edition published in 2017, was the primary source of the project trip generation rates.

See **Table 2** for the trip generation rates and **Table 3** for the project trip summary.

Table 2: Trip Generation Rates

Land Use	ITE Code ¹	Daily Trip Rate	AM Peak Hour Rate		PM Peak Hour Rate	
			Total	In : Out	Total	In : Out
Single Family Dwelling Unit	210	9.839 /DU	0.73 /DU	25% : 75%	0.99 /DU	63% : 37%

¹ Source: ITE Trip Generation Manual, 10th Edition. Rates shown are based on fitted curve equation.

Table 3: Estimated Number of Project Trips

Land Use	Intensity	Daily Trips	AM Peak Hour Trips		PM Peak Hour Trips	
			Total	In : Out	Total	In : Out
Single Family Dwelling Unit	199 DU	1958	146	36 : 110	197	124 : 73

Notes:

DU = Dwelling Unit

Traffic Impact Study Scoping Agreement

Project Location: Southeast corner of Joiner Parkway/Nicolaus Road, Lincoln, CA

4. Traffic Distribution

The trip distribution was determined based upon the location of the project relative to the area transportation network and surrounding land uses.

The trip distribution is graphically shown in **Exhibit 2**.

5. Study Intersections

Study intersections were identified as those where the proposed project will add 50 or more trips during either the weekday AM Peak Hour or PM Peak Hour. The study shall include the intersections listed below and shown in **Exhibit 3**.

ID	Study Intersection	Signalized?	Jurisdiction
1	Nicolaus Road / Nelson Lane	No	City of Lincoln
2	Nicolaus Road / Lakeside Drive	No	City of Lincoln
3	Joiner Parkway / Nicolaus Road	Yes	City of Lincoln
4	Joiner Parkway / 5 th Street	Yes	City of Lincoln
5	Joiner Parkway / 3 rd Street	Yes	City of Lincoln
6	Joiner Parkway / 1 st Street	Yes	City of Lincoln
7	Joiner Parkway / Moore Road	No	City of Lincoln
8	Joiner Parkway / Danbury Drive	Yes	City of Lincoln
9	Joiner Parkway / Groveland Lane	Yes	City of Lincoln
10	Joiner Parkway / Ferrari Ranch Road	Yes	City of Lincoln
11	Ferrari Ranch Road / Groveland Lane	Yes	City of Lincoln
12	Ferrari Ranch Road / SR-65 Northbound Ramps	Yes	Caltrans
13	Ferrari Ranch Road / SR-65 Southbound Ramps	Yes	Caltrans
14	Site Driveway #1 / Nicolaus Road	No	City of Lincoln
15	Site Driveway #2 / Joiner Parkway	No	City of Lincoln

6. Freeway Segment Analysis

The proposed project is projected to add approximately 22 (15% of 146) AM peak hour trips onto SR-65 north of Ferrari Ranch Road and 49 (25% of 197) PM peak hour trips onto SR-65 south of Ferrari Ranch Road. Therefore, the traffic study will not include a freeway segment analysis on SR-65 since the project is projected to add less than 150 (two-way) peak hour trips to the highway system.

Traffic Impact Study Scoping Agreement

Project Location: Southeast corner of Joiner Parkway/Nicolaus Road, Lincoln, CA

7. Analysis Scenarios

The analysis scenarios are as follows:

1. Existing
2. Existing + Project
3. Existing + Approved/Pending Projects
4. Existing + Approved/Pending Projects + Proposed Project
5. Cumulative (Year 2036) ← City requested Year 2040 be analyzed.
6. Cumulative (Year 2036) + Proposed Project

8. Project Phasing

The project is proposed to be constructed in one phase.

9. Cumulative Projects

Coordination will be conducted with City of Lincoln staff to identify the list of cumulative projects for consideration as part of this analysis.

10. Traffic Counts

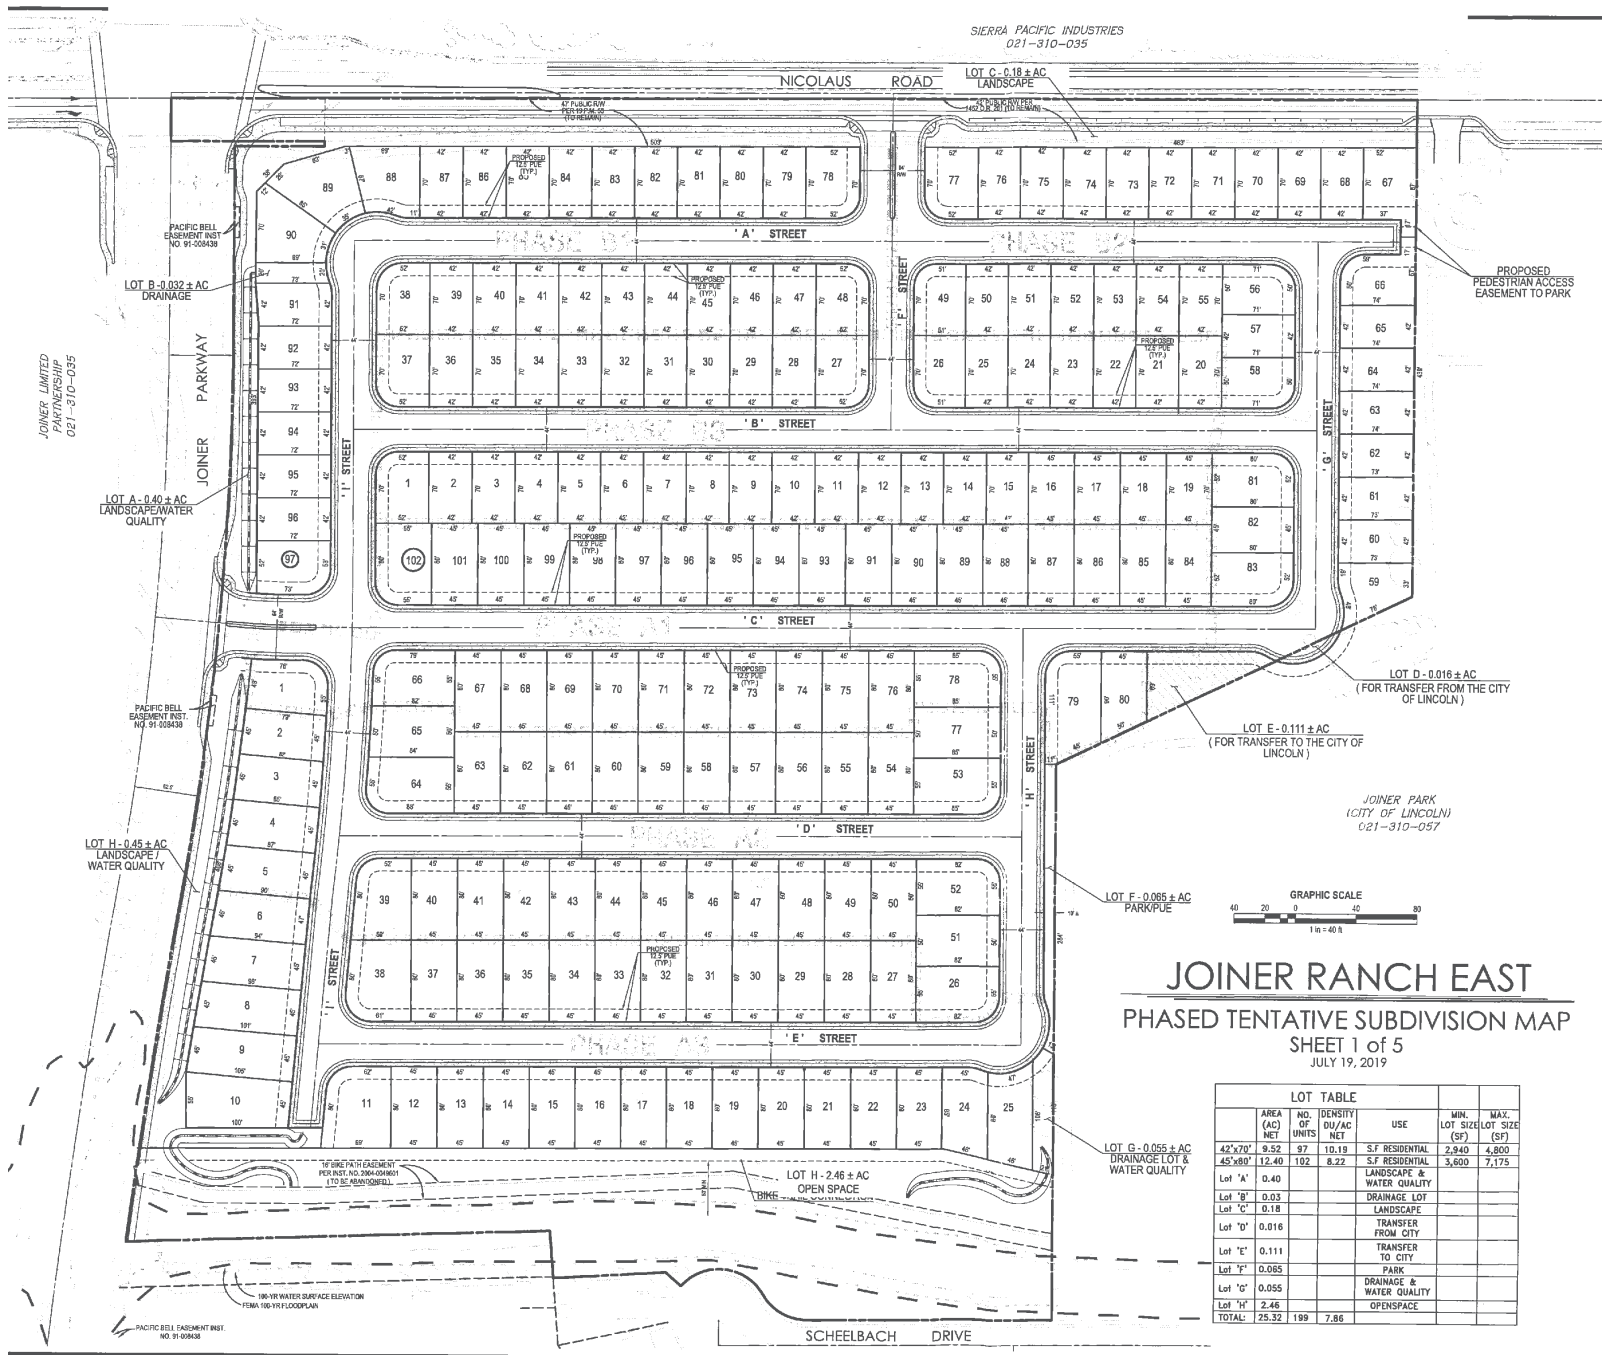

- 1) Traffic count guidelines:
 - a. Must be taken on Tuesdays, Wednesdays or Thursdays.
 - b. Must exclude holidays.
 - c. Must be taken on days of good weather, and avoid atypical conditions (e.g., road construction, detours, or major traffic incidents).
 - d. Traffic counts will be conducted while local schools are in session.
 - e. Count time periods:
 - 7:00 AM to 9:00 AM
 - 4:00 PM to 6:00 PM

11. Roadway Segment Analysis

Segment analysis will be conducted for all study scenarios with roadway classifications consistent with the City's General Plan.

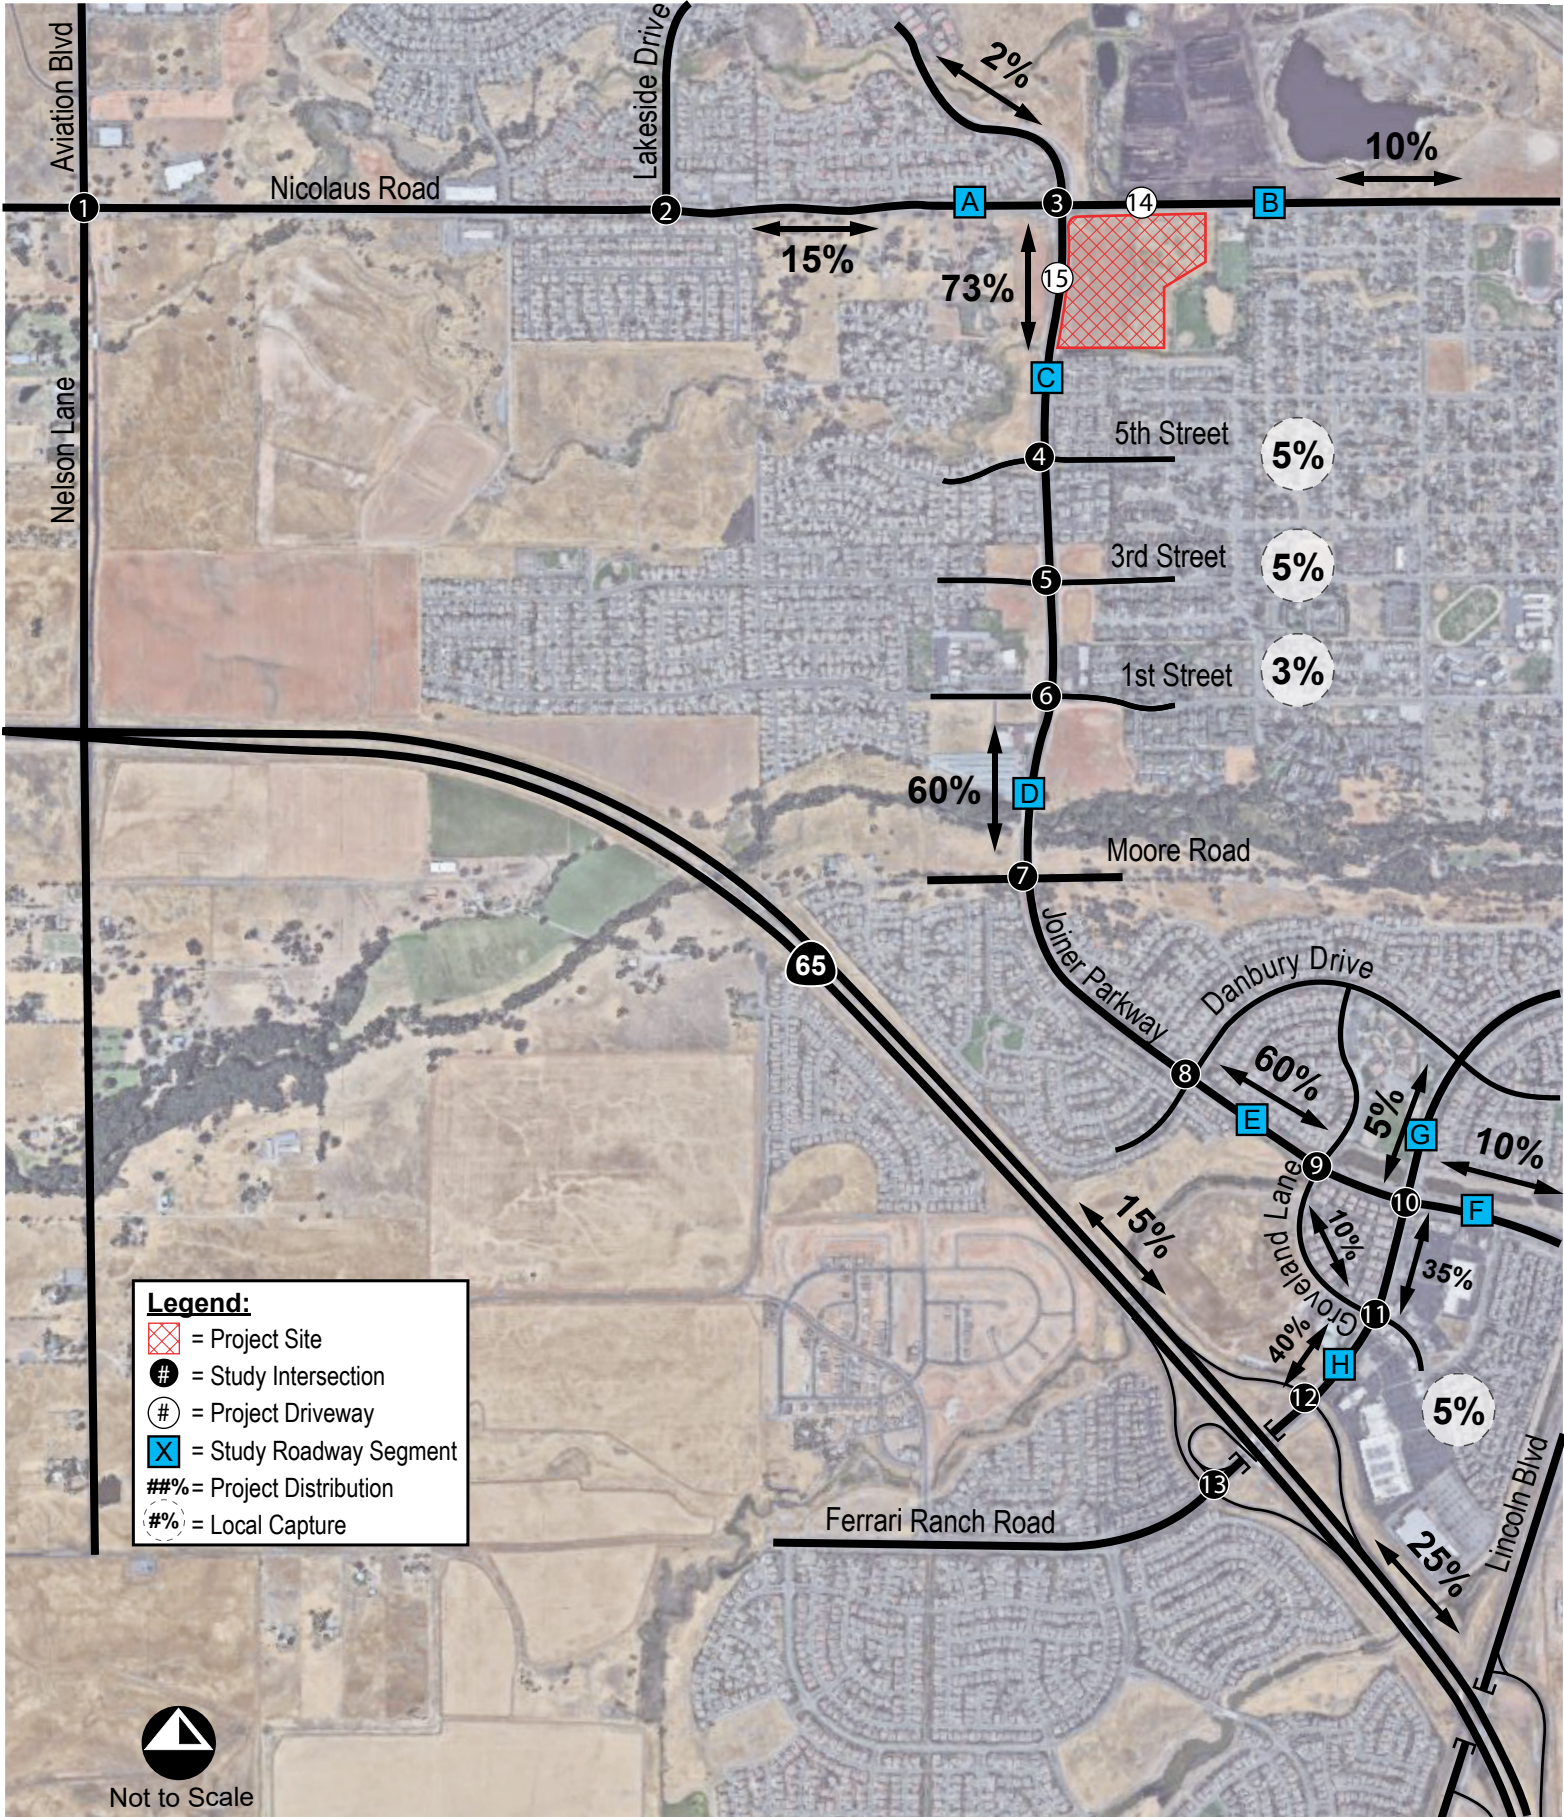

12. Study Guidelines & Methodologies

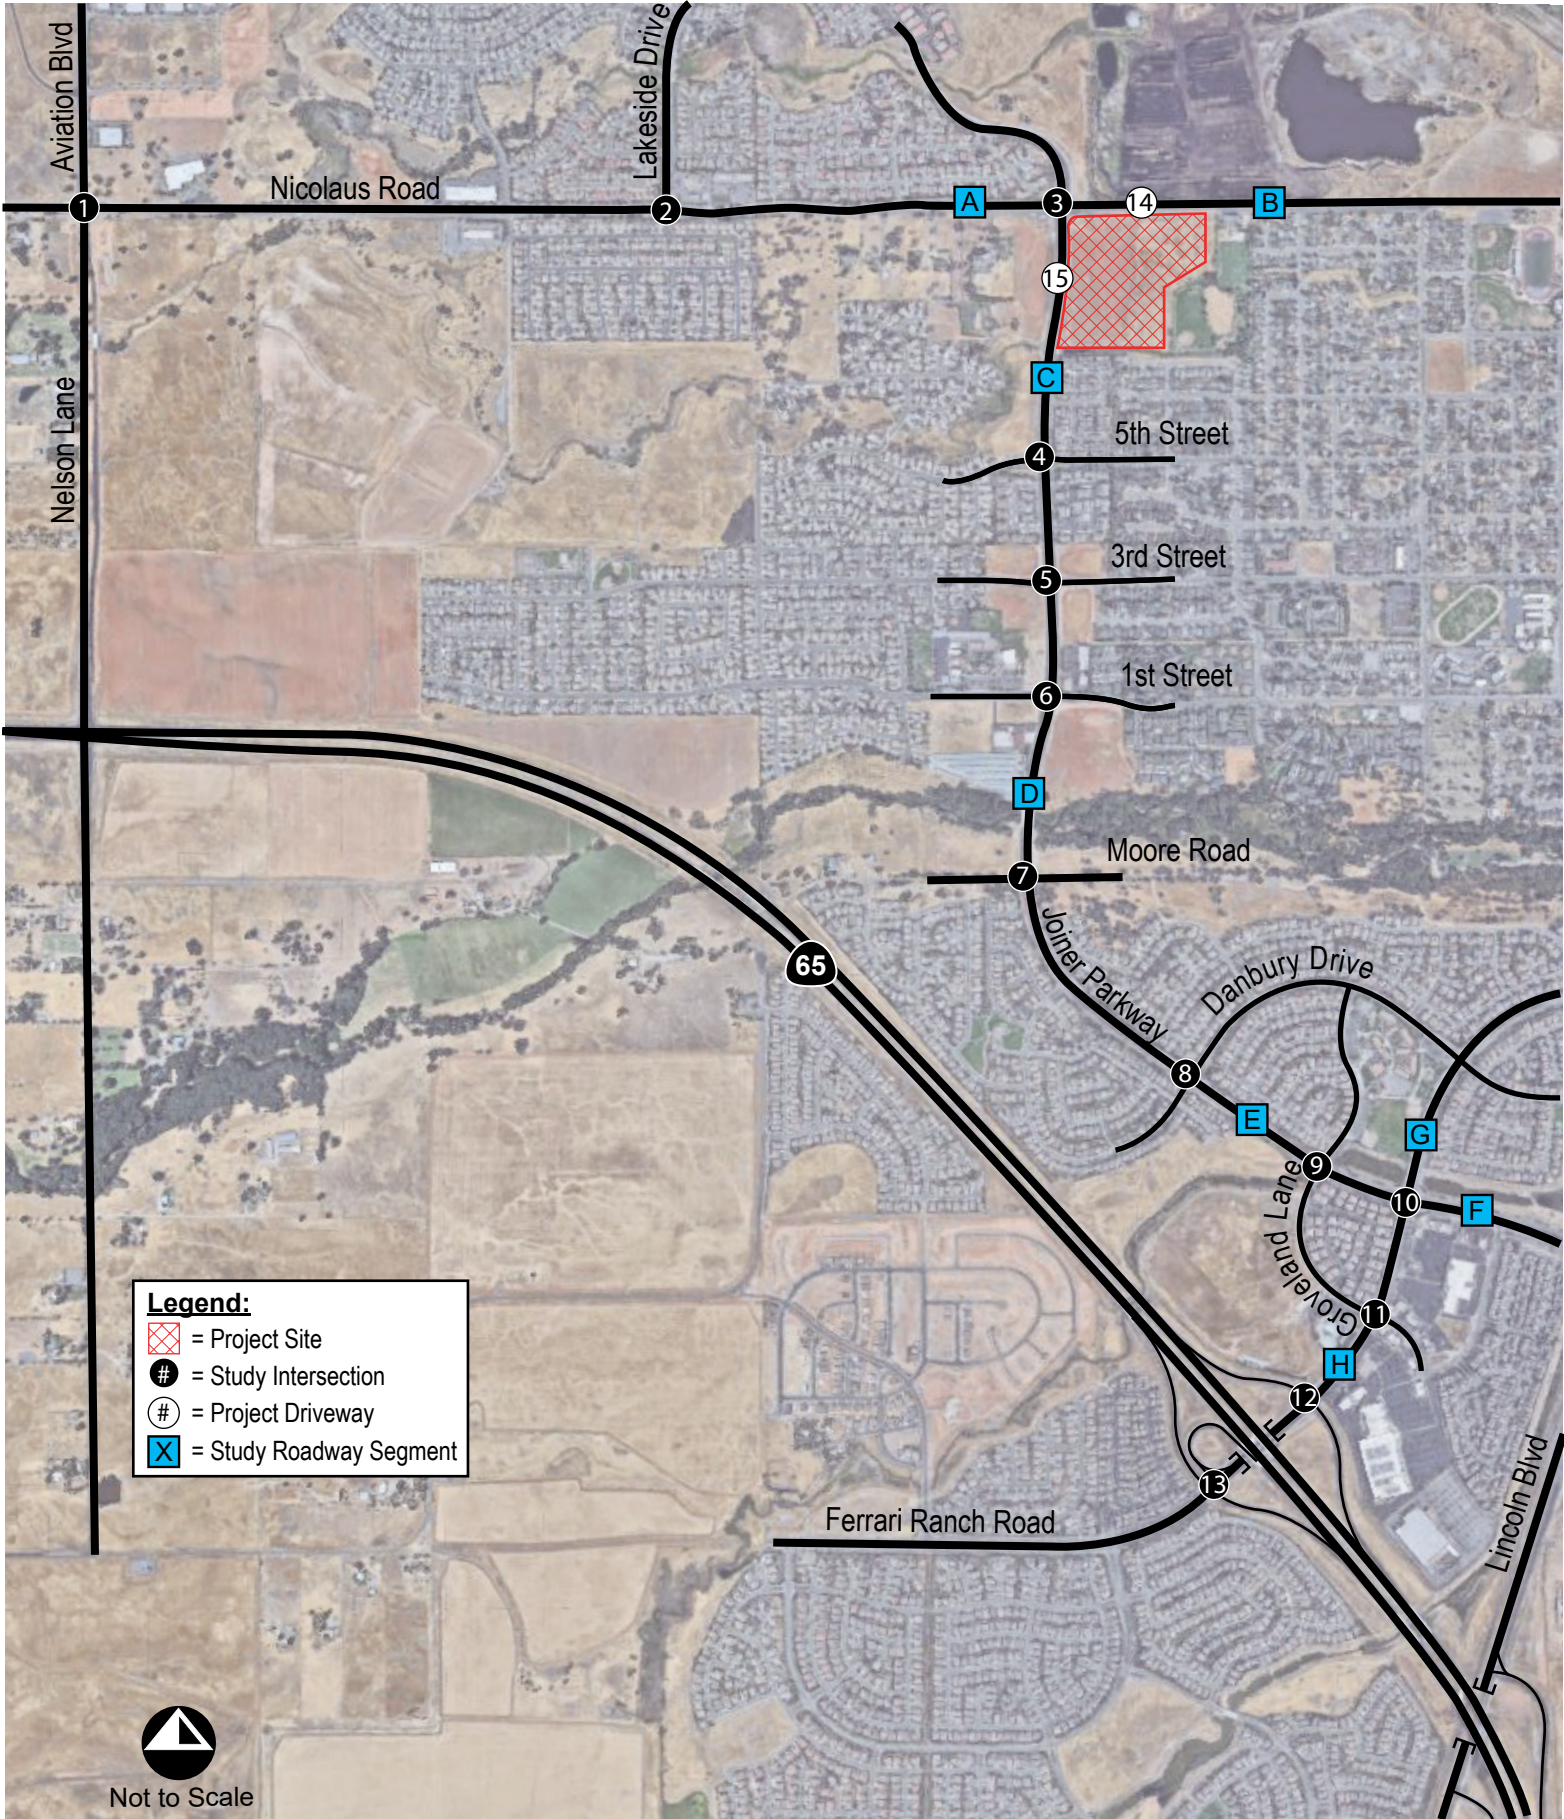

- 1) Michael Baker International will work with the City of Lincoln to prepare the Traffic Study according to the City's guidelines and procedures.
- 2) Analysis of stop-controlled and signalized intersections will be conducted using Highway Capacity Manual, 6th edition output from Synchro.

Intersection Summary												
HCM 6th Ctrl Delay			5.4									
HCM 6th LOS			A									
Notes												
User approved volume balancing among the lanes for turning movement.												
* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.												
Unsignalized Delay for [WBR] is excluded from calculations of the approach delay and intersection delay.
